ter. In the ſpring, when this danger is over, they ſhould reſume their firſt ſtation: namely, the pots ſhould be plunged up to the rim, as when the ſeeds were firſt ſown: and if this place be well ſheltered, they may remain there all winter; if not, and ſevere froſts threaten, they ſhould be taken up and placed under cover as before. After they have been thus managed three years from the ſeeds, they ſhould be taken out of the pots with care, and planted in the nurſery-ground at ſmall diſtances, where they may remain until they are ſtrong enough to be finally ſet out. By ſowing the ſeeds in pots, and aſſiſting them by an hot-bed, a year at leaſt is ſaved; for they hardly ever come up, when ſown in a natural border, under two years from the ſeeds; nay, they have been known to remain three, and even ſome plants to come up the fourth year after ſowing; which at once ſhows the preference of the former practice, and ſhould caution all who have not ſuch convenience, not to be too haſty in diſturbing the beds when the ſeeds are ſown in the natural ground; as, eſpecially if they are not well preſerved in mould or ſand, theſe may be ſome years before they appear. Indeed, it is the long time we are in obtaining theſe plants, either by ſeeds, layers, &c. that makes them at preſent ſo very ſcarce amongſt us. 2. Theſe plants may alſo be increaſed by layers; but very ſlowly; for they will be two, and ſometimes three, or even four years, before they have ſtruck out good roots; though the Benjamin tree is propagated the faſteſt by this method. The young twigs ſhould be laid in the ground in the autumn; and it will be found that twiſting the wire round the bud, ſo as in ſome degree to ſtop the progreſs of the ſap, and taking away with a knife a little of the bark, is a more effectual method of obtaing good roots ſoon than by the ſlit or twiſting, eſpecially when practiſed on the ſaſſafras tree. 3. Plants of theſe ſorts are likewiſe ſometimes obtained by ſuckers, which they will at all times throw out, and which may be often taken off with pretty good roots; but when they are weak, and with bad roots, they ſhould be planted in pots, and aſſiſted by a moderate heat in a bed: With ſuch management they will be good plants by the autumn, and in the ſpring may be planted out any where. 4. Cuttings of theſe trees, when planted in a good bark-bed, and duly watered, will alſo oftentimes grow. When this method is practiſed, and plants obtained, they muſt be inured by degrees to the open air, till they are hardy enough to be finally planted out.

The Indian bay, the camphor, the avocado, and the cinnamon-tree, require the treatment common to green-houſe plants; the latter, however, is rather a ſtove plant in this country.—Of its culture or propagation in its native places, no particular account has been given by botanical writers; but it will now become an important conſideration, ſince this valuable tree has been planted in the Weſt Indies. Of the advantages promiſed by this acquiſition we are indebted for the firſt accounts to Dr Wright in 1787[†]; from whom alſo we learn that its propagation is very eaſy, and its culture requires little care, as more particularly noticed below. Since that time, ſome obſervations by Dr Dancer, relative to its cultivation, have appeared in the Tranſactions[*] of the Society of Arts, &c. Theſe obſervations confirm, without adding any thing eſſential to the conciſe notice of Dr Wright. We are informed, that as the tree "puts out numerous ſide-branches, with a denſe foliage, from the very bottom of the trunk; this furniſhes an opportunity of obtaining plenty of layers, and facilitates the propagation of the tree, as it does not perfect its ſeeds in any quantity under ſix or ſeven years; when it becomes ſo plentifully loaded, that a ſingle tree is ſufficient almoſt for a colony. It ſeems to delight in a looſe moiſt ſoil, and to require a ſouthern aſpect; the trees, thus planted, flouriſhing better than others growing in loam and not ſo well expoſed to the ſun. When healthy, it is (from layers) of a pretty quick growth, reaching in *eight* years the height of fifteen or twenty feet, is very ſpreading, and furniſhed with numerous branches of a fit ſize for decortication, The ſeeds, however, are a long time in coming up, and the plants make ſmall progreſs for the firſt year or two." It is added, that "the birds appear to be very fond of the berries, and will probably propagate this tree in the ſame way they do many others every where over the iſland; ſo that in a ſhort time it will grow ſpontaneouſly, or without cultivation." The age for decortication, ſaid above to be eight years, it will be obſerved, is different from that ſpecified below for the trees in Ceylon.

Uſes. Evelyn ſays, he has ſeen bay trees near 30 feet high, and almoſt two feet in diameter; and enumerates the bay amongſt uſeful trees. Hanbury catches at this idea, and tells us in general terms, that "it will grow to 30 feet in height, with a trunk of two feet in diameter;" and accordingly he arranges it among his foreſt trees: he acknowledges, however, at the ſame time, that the wood is of little value. The bay is nevertheleſs a fine aromatic and a beautiful evergreen: It is ſaid to be the true *laurus* or laurel of the ancients, with which they adorned the brows of their ſucceſsful generals. Like the holly, box, and laurel, the bay will bear the ſhade and drip of taller trees; and it is upon the whole a very deſirable, as being a very ornamental, evergreen.

The leaves and berries of this tree have a moderately ſtrong aromatic ſmell, and a warm, bitteriſh, pungent taſte: the berries are ſtronger in both reſpects than the leaves, and afford in diſtillation a larger quantity of eſſential aromatic oil; they yield alſo an almoſt inſipid oil to the preſs, in conſequence of which they prove unctuous in the mouth. They are warm carminatives, and ſometimes exhibited in this intention againſt flatulent colics, and likewiſe in hyſterical diſorders. Their principal uſe in the preſent practice is in glyſters, and ſome external applications. The deciduous bay, in a moiſt rich ſoil, in which it principally delights, will grow to be about 16 feet high; but in ſome ſoils, that are poſſeſſed of the oppoſite qualities, it will hardly arrive at half that height. The flowers are ſucceeded in May by large red berries, which never ripen in England; ſo that, notwithſtanding the leaves in ſummer are very pretty, and the colour of the bark makes a variety in winter, it is principally the ſcarcity of this plant which makes it valuable.

The *benzoin* tree will grow to a much larger ſize than the other, and its branches are more numerous. They are ſmooth, and of a fine light-green colour. The leaves on their upper ſurface are ſmooth and of a fine light-green colour, but their under ſurface is venoſe, and of a whitiſh caſt. When bruiſed, they emit a fine fragrance. This tree was formerly miſtaken for that which produces the drug called *benzoin;* which is now known to be obtained from a ſpecies of ſtyrax. See STYRAX.

[†] *Lond. Med. Journal*, Vol. III. part 3.

[*] Vol. VIII. p. 214, &c.

The *ſaſſafras* will grow to nearly the height of the others, though the branches are not ſo numerous. Its bark is ſmooth, and of a red colour, which beautifully diſtinguiſhes it in winter; whilſt the fine ſhining green of its leaves conſtitutes its greateſt beauty in ſummer. In theſe, indeed there is a variety, and a very extraordinary one. Some are large, and of an oval figure; others are ſmaller, and of the ſame ſhape; whilſt others again are ſo divided into three lobes, as to reſemble the leaves of ſome ſorts of the fig-tree. In America, the ſaſſafras generally ſtands ſingle in the woods, and along the fences round the fields. It flowers in May before the leaves come out; and being entirely covered with them, it is diſtinguiſhed at a great diſtance by their beautiful yellow colour.

The root of the ſaſſafras has a fragant ſmell, and a ſweetiſh, aromatic, ſubacrid taſte; the bark taſtes much ſtronger than any other part, and the ſmall twigs ſtronger than the large pieces. It is a warm aperient and corroborant, and frequently employed with good ſucceſs for purifying and ſweetening the blood and juices. For theſe purpoſes, infuſions made from the raſped root or bark may be drank as tea. In ſome conſtitutions indeed, ſuch liquors are, by their fragrance, apt, on firſt taking them, to affect the head; but in ſuch caſes they may be advantageouſly freed from their flavour by boiling, A decoction of ſaſſafras, boiled down to the conſiſtence of an extract, proves ſimply bitteriſh and ſubaſtringent. Hoffman aſſures us, that he has frequently given this extract to the quantity of a ſcruple at a time, with remarkable ſucceſs, for ſtrengthening the tone of the viſcera in cachexies; as alſo in the decline of intermittent fevers, and in hypochondriacal ſpaſms. Saſſafras yields in diſtillation an extremely fragrant oil of a penetrating pungent taſte, ſo ponderous (notwithſtanding the lightneſs of the drug itſelf) as to ſink in water. Rectified ſpirit extracts the whole taſte and ſmell of ſaſſafras; and elevates nothing in evaporation: hence the ſpirituous extract proves the moſt elegant and efficacious preparation, as containing the virtue of the root entire.

The bark of this tree is uſed by the women in Penſylvania and other parts of North America in dying worſted a fine laſting orange-colour, which does not fade in the ſun. They uſe urine inſtead of alum in dying; and boil the dye in a braſs boiler, becauſe in an iron veſſel it does not yield ſo fine a colour. The wood is made uſe of for poſts belonging to the incloſures, for it is ſaid to laſt a long time in the ground: but it is likewiſe ſaid, that there is hardly any kind of wood which is more attacked by worms than this when it is expoſed to the air without cover; and that in a ſhort time it is quite worm-eaten through and through. On cutting ſome part of the ſaſſafras tree, or its ſhoots and holding it to the noſe, it has a ſtrong but pleaſant ſmell. Some people peel the root, and boil the peel with the beer which they are brewing, becauſe they believe it wholeſome. For the ſame reaſon, the peel is put into brandy either whilſt it is diſtilling or after it is made. Profeſſor Kalm informs us, that a decoction of the root of ſaſſafras in water, drank every morning, is uſed with ſucceſs in the dropſy.—When part of a wood is deſtined for cultivation, the ſaſſafras trees are commonly left upon it, becauſe they have a very thick foliage, and afford a cool ſhade to the cattle during the great heats. Some people get their bed-poſts made of ſaſſafras wood, in order to expel the bugs; for its ſtrong ſcent, it is ſaid, prevents thoſe vermin from ſettling in them. For two or three years together this has the deſired effect, or about as long as the wood keeps its ſtrong aromatic ſmell; but after that time it has been obſerved to loſe its effect. In Penſylvania ſome people put chips of ſaſſafras into their cheſts, where they keep all ſorts of woollen ſtuffs, in order to expel the moths (or larvæ or caterpillars of moths or tinies) which commonly ſettle in them in ſummer. The root keeps its ſmell for a long while: Profeſſor Kalm ſaw one which had lain five or ſix years in the drawer of a table, and ſtill preſerved the ſtrength of its ſcent. The people alſo gather its flowers, and uſe it as tea.

Kalm's Travels in America.

The *perſea*, or *alligator pear* tree, is cultivated univerſally in the Weſt Indies by all ranks of people. The fruit is pear-ſhaped, and from one to two pounds in weight. On removing a green ſkin or covering, we come to a yellow butyraceous ſubſtance; and in the heart find a large round ſeed or ſtone, which is unequal in the ſurface, and exceedingly hard and woody. This fruit is ripe in Auguſt and September, and conſtitutes one of the moſt agreeable articles of diet for ſix or eight weeks to the negroes. Theſe pears, with a little ſalt and a plantain or two, afford a hearty meal. They are alſo ſerved up at the tables of white people as choice fruit. When the pear is ripe, the yellow or eatable ſubſtance is firmer than butter, and taſtes ſomewhat like butter or marrow: hence it is called by ſome the *vegetable marrow.* But however excellent this fruit is when ripe, it is very dangerous when pulled and eaten before maturity. Dr Wright ſays, he has repeatedly known it to produce fever and dyſentery, which were removed with difficulty.—The leaves of this tree and thoſe of the bead-vine or wild liquorice are made into pectoral decoctions by the common people.—The large ſtone is uſed for marking linen. The cloth is tied or held over the ſtone, and the letters are pricked out by a needle through the cloth and into the ſeed. The ſtain is a reddiſh brown, which never waſhes out.—The buds of the alligator tree are ſaid to be uſed with ſucceſs in ptiſans againſt the venereal diſeaſe. An infuſion of them in water, drank in the morning faſting, is ſtrongly recommended for diſlodging coagulated blood in the ſtomach produced by a fall or a ſevere ſtroke on that important entrail. "The wild boars in the Eaſt Indies (ſays Labat) eat greedily of the mammees and avocado pears, which give their fleſh a luſcious and moſt agreeable ſavour."

Caſſia. The bark of this ſpecies is known in the ſhops by the name of *caſſia lignea.* This bark, which is imported from different parts of the Eaſt Indies and from China, has a very near reſemblance to the cinnamon; though diſtinguiſhable from it by being of a thicker and coarſer appearance, and by its breaking ſhort and ſmooth, while the cinnamon breaks fibrous and ſhivery.—It reſembles cinnamon ſtill more exactly in its aromatic flavour than in its external appearance; and ſeems only to differ from it in being ſomewhat weaker, in abounding more with a viſcous mucilaginous matter, and in being leſs aſtringent. Accordingly, it has not only a place in the Edinburgh pharmacopœia, but is alſo the baſis of a diſtilled water. It is perhaps ſurpriſing that the London college have given it no place in their liſts. But although it does not enter their pharmacopœia, yet we may venture to aſſert, that it will not be neglected by the apothecaries. At preſent it is very common with many of them to ſubſtitute the caſſia in every caſe for the more expenſive article cinnamon: and indeed almoſt the whole of what is at preſent ſold under the title either of ſimple or ſpirituous cinnamon-water is entirely prepared from caſſia; and not even entirely from the bark, but from a mixture of the bark and buds.

Cinnamon is the under-bark of the *cinnamomum*. The beſt ſeaſon for ſeparating it from the outer-bark, which is grey and rugged, is the ſpring, when the ſap flows in the greateſt abundance. It is cut into thin ſlices, and expoſed to the ſun, and curls up in drying.—The old trees produce a coarſe kind of cinnamon; the ſpice is in perfection only when the trees are not older than three or four years. When the trunk has been ſtripped of its bark, it receives no further nouriſhment; but the root is ſtill alive, and continues to throw out freſh ſhoots. The fruit of the tree is ſhaped like an acorn, but is not ſo large. Its ſeed, when boiled in water, yields an oil which ſwims at top, and takes fire. If left to cool, it hardens into a white ſubſtance, of which candles are made, which have an agreeable ſmell, and are reſerved for the uſe of the king of Ceylon. The cinnamon is not reckoned excellent unleſs it be fine, ſmooth, brittle, thin, of a yellow colour inclining to red; fragrant, aromatic, and of a poignant, yet agreeable taſte. The connoiſſeurs give the preference to that the pieces of which are long, but ſlender. That which comes to us is generally mixed with the Caſſia bark; but this laſt is eaſily diſtinguiſhed. Cinnamon ſplinters in breaking, and has a roughneſs along with its aromatic flavour; while the Caſſia breaks over ſmooth, and has a mucilaginous taſte. Cinnamon is a very elegant and uſeful aromatic, more grateful both to the palate and ſtomach than moſt other ſubſtances of this claſs. By its aſtringent quality it likewiſe corroborates the viſcera, and proves of great ſervice in ſeveral kinds of alvine fluxes, and immoderate diſcharges from the uterus.

The cinnamon plant, with other valuable ones, was taken in a French ſhip by Admiral Rodney in the laſt war, and preſented by him to the aſſembly of Jamaica. One of the trees was planted in the botanic garden in St Thomas in the Eaſt; the other by Hinton Eaſt, Eſq; in his noble garden at the foot of the Blue Mountains. From theſe parent trees ſome hundreds of young trees are already produced from layers and cuttings, and diſperſed in different parts of the country, in all which it thrives luxuriantly with little trouble: we may therefore hope it will ſoon be a valuable addition to commerce. Upon comparing the parts of the tree with the deſcription and figure given by Burman and other botaniſts, it appears to be the real Ceylon cinnamon, and of the beſt kind, called by the natives *Raſſe Coronde*: but the ſpecimens of bark taken put it out of all doubt, being, in the opinion of the beſt judges, of an equal, if not ſuperior, quality to any imported from India. The ſmalleſt bit of the bark, Dr Wright aſſures us, is quite a cordial. The cinnamon we have from Holland, he obſerves, is often inert, and gives room to ſuſpect that it has been ſubjected to a ſlight proceſs in diſtillation.

In regard to the trees growing in Jamaica, Dr Dancer informs us in his paper already quoted, that "The beſt cinnamon bark, according to the different trials I have made, is taken from the ſmall branches, of about an inch diameter, the larger limbs not being ſo eaſily decorticated, and not yielding ſo good or ſo ſtrong a cinnamon. The ſmaller twigs, or thoſe that have not acquired a cineritious bark, are too full of ſap and mucilage, and have little *aroma*. It is the *liber*, or inner bark, that conſtitutes the cinnamon; from which the two external barks muſt be carefully and entirely ſeparated, or they vitiate the flavour of the cinnamon; to do which with dexterity, and to raiſe the bark from the wood, requires ſome practice. The bark being ſeparated, the ſmaller pieces are to be placed within the larger; which, by expoſure to the ſun or the air, preſently coil up, and require no further preparation. A dry ſeaſon is the proper one for taking the bark; as it is found to be weakened after long or heavy rains. Cinnamon, though more retentive of its virtues than any of the other ſpices, yet requires to be protected, when taken from the air and moiſture, by cloſe packing in cedar cheſts.—The leaves of this tree, whether recent or dried, are ſo ſtrongly impregnated with an *aroma*, as to afford a good ſuccedaneum for the bark both in cookery and medicine. Diſtilled, they give an excellent ſimple and ſpirituous water, and an eſſential oil. Powdered, they are a good aromatic ſpecies, or mareſchal perfume."

Camphor, though ſolid, is the eſſential oil of the *laurus camphora*; and is obtained from it by diſtillation in the Eaſt Indies. (See the article CAMPHORA).—This tree is another of the captured plants given to the inhabitants of Jamaica; and, if cultivated with care, will alſo be a uſeful acquiſition.

The Abbe Groſier informs us, that in China ſome of theſe trees are found above 100 cubits in height, and ſo thick that 20 perſons cannot incloſe them. The tree is there called *tchang*; and it is ſaid that the trunk, when old, emits ſparks of fire, but of ſo ſubtle a nature as not even to injure the hair of thoſe who are near it. Common camphor coſts only a penny the ounce at Pe-king; but it is inferior to that of Borneo, in the judgment even of the Chineſe.

The manner in which ſome authors have ſpoken of Camphire (the Abbe obſerves), gives us reaſon to conclude that they have been entirely ignorant of the proceſs employed to obtain this ſalutary gum. The camphor does not drop to the earth, like the gums of certain reſinous trees, which are preſerved by diſcharging that part of their ſubſtance which is too oily;

neither does it diſtil from the top to the bottom of the tree through an inciſion made in it. The Chineſe would practiſe this method could it be employed with ſucceſs; for it is very common in China to make ſuch kind of inciſions in reſinous trees. The method uſed by the Chineſe for obtaining camphire is as follows.—They take ſome branches freſh from the *tchang*, chop them very ſmall, and lay them to ſteep in ſpring-water for three days and three nights. After they have been ſoaked in this manner, they are put into a kettle, where they are boiled for a certain time, during which they keep continually ſtirring them with a ſtick made of willow. When they perceive that the ſap of theſe ſmall chips adheres ſufficiently to the ſtick in the form of white froſt, they ſtrain the whole, taking care to throw away the dregs and refuſe. This juice is afterwards poured gently into a new earthen baſon well varniſhed, in which it is ſuffered to remain one night. Next morning it is found coagulated, and formed into a ſolid maſs. To purify this firſt preparation, they procure ſome earth from an old earthen wall, which, when pounded and reduced to a very fine powder, they put into the bottom of a baſon made of red copper; over this layer of earth they ſpread a layer of camphire, and continue thus until they have laid four ſtrata. The laſt, which is of very fine earth, they cover up with the leaves of the plant *po-ho*, or pennyroyal; and over the whole they place another baſon, joining it very cloſely to the former by means of a kind of red earth that cements their brims together. The baſon thus prepared is put over a fire, which muſt be managed ſo as to keep up an equal heat: experience teaches them to obſerve the proper degree. But above all, they muſt be very attentive leſt the plaſter of fat earth which keeps the baſons together ſhould crack or fall off; otherwiſe the ſpirituous parts would evaporate and ruin the whole proceſs. When the baſons have been expoſed to the neceſſary heat, they are taken off and left to cool; after which they are ſeparated, and the ſublimated camphire is found adhering to the cover. If this operation be repeated two or three times, the camphor is found purer and in larger pieces. Whenever it is neceſſary to uſe any quantity of this ſubſtance, it is put between two earthen veſſels, the edges of which are ſurrounded with ſeveral bands of wet paper. Theſe veſſels are kept for about an hour over an equal and moderate fire; and when they are cool, the camphire is found in its utmoſt perfection and ready for uſe. This method of procuring camphor, even from the heart of the tree, may be practiſed in all ſeaſons of the year; which would not be the caſe (our author obſerves), were it extracted like other reſinous ſubſtances that only flow during a certain ſhort ſpace of time. Beſides, by lopping the branches of the camphire-tree, leſs hurt is done to it than by making inciſions, which are always hazardous.

LAUS, or Laos (anc. geog.), a river of Italy, ſeparating Lucania from the Bruttii, and running from eaſt to weſt into the Tuſcan ſea; with a cognominal bay, and a town, the laſt of Lucania, a little above the ſea; a colony from Sybaris, according to Strabo, Pliny, Stephanus. Both town and river are now called *Laino*, in the Calabria Citra; and the bay, called *Golfa della Scalea*, or *di Policaſtro*, two adjoining towns, is a part of the Tuſcan ſea, extending between the promontory Palinurus and the mouth of the Laus.

Laus Pompeia (anc. geog.), a town of Inſubria, ſituated to the eaſt of Milan, between the rivers Addua and Lamber. A town built by the Boii after their paſſing the Alps: its ancient Gaulic name is unknown. Strabo Pompeius, father of Pompey, leading thither a colony, gave it a new name, and conferred the *Jus Latii* on the ancient inhabitants who remained there. The modern Lodi is built from its ruins, at ſome diſtance off. E. Long. 10. 15. N. Lat. 45. 22.

LAUSANNE, a large, ancient, and handſome town of Switzerland, capital of the country of Vaud, and in the canton of Berne, with a famous college and biſhop's ſee. The town-houſe and the other public buildings are magnificent. It is ſeated between three hills near the lake of Geneva, in E. Long. 6. 35. N. Lat. 46. 30.—The town ſtands on an aſcent ſo ſteep, that in ſome places the horſes cannot draw up a carriage without great difficulty, and foot-paſſengers aſcend to the upper part of the town by ſteps. Here is an academy for the ſtudents of the country; the profeſſors are appointed by government; and there is a pretty good public library. The church, formerly the cathedral, is a magnificent Gothic building, ſtanding on the moſt elevated part of the town. Among other ſepulchres it contains that of Amadæus VIII. duke of Savoy, ſtyled the *Solomon* of his age; beſt known by the title of *Antipope Felix V.* who exhibited the ſingular example of a man twice abdicating the ſovereignty, and retiring from regal pomp to a private ſtation.

The ſame year that the country named *Pays de Vaud* was conquered from the houſe of Savoy, the inhabitants of Lauſanne put themſelves under the protection of the Canton of Berne, their biſhop having retired from the town. At that time its privileges were confirmed and augmented, and it is ſtill governed by its own magiſtrates. The citizens of the principal ſtreet have the privilege of pronouncing ſentence in criminal caſes. If the criminal is found, and acknowledges himſelf guilty, the burghers of the ſtreet aſſemble: one of the magiſtrates pleads in his behalf, and another againſt him; the court of juſtice give their opinion upon the point of law; and the majority of citizens poſſeſſing houſes in the principal ſtreet, determine the penalty. In capital caſes there is no pardon, according to the letter of the law, unleſs it can be obtained within 24 hours from the ſovereign council of Berne, though it generally happens that eight days are allowed for this purpoſe. When the criminal is ſeized within the juriſdiction of the town, the fact is tried, and the burghers pronounce ſentence, from which there is no appeal; but if he happens to be taken in the diſtrict of the bailiff, there is an appeal to the government of Berne.

LAVORI (TERRA DI), a province of Italy, in the kingdom of Naples, bounded on the weſt by the Campagna of Rome, and by Farther Abruzzo; on the north by the Citerior Abruzzo, and by the county of Moliſſa; on the eaſt by the Ultra Principata; and on the ſouth by the Principata Citra. It is about 63 miles in length and 35 in breadth; and is fertile in corn, excellent vines, and other fruits. There are alſo ſeveral mineral ſprings and mines of ſulphur; Naples is the capital town.

Part I. Of the NATURE of LAWS in general.

Laws
neral.
1
ition;
ral,

LAW, in its moſt general and comprehenſive ſenſe, ſignifies a rule of action ; and is applied indiſcriminately to all kinds of action, whether animate or inanimate, rational or irrational. Thus we ſay, the laws of motion, of gravitation, of optics, of mechanics, as well as the law of nature and of nations. And it is that rule of action which is preſcribed by ſome ſuperior, and which the inferior is bound to obey.

Thus when the Supreme Being formed the univerſe, and created matter out of nothing, he impreſſed certain principles upon that matter, from which it can never depart, and without which it would ceaſe to be. When he put that matter into motion, he eſtabliſhed certain laws of motion, to which all moveable bodies muſt conform. And, to deſcend from the greateſt operations to the ſmalleſt, when a workman forms a clock, or other piece of mechaniſm, he eſtabliſhes at his own pleaſure certain arbitrary laws for its direction ; as, that the hand ſhall deſcribe a given ſpace in a given time ; to which law as long as the work conforms, ſo long it continues in perfection, and anſwers the end of its formation.

If we farther advance, from mere inactive matter to vegetable and animal life, we ſhall find them ſtill governed by laws ; more numerous indeed, but equally fixed and invariable. The whole progreſs of plants, from the ſeed to the root, and from thence to the ſeed again ; the method of animal nutrition, digeſtion, ſecretion, and all other branches of vital economy ;—are not left to chance, or the will of the creature itſelf, but are performed in a wondrous involuntary manner, and guided by unerring rules laid down by the great Creator.

2
icular.

This then is the general ſignification of law, a rule of action dictated by ſome ſuperior being : and, in thoſe creatures that have neither the power to think nor to will, ſuch laws muſt be invariably obeyed, ſo long as the creature itſelf ſubſiſts ; for its exiſtence depends on that obedience. But laws, in their more confined ſenſe, and in which it is our preſent buſineſs to conſider them, denote the rules, not of action in general, but of *human* action or conduct : that is, the precepts by which man, the nobleſt of all ſublunary beings, a creature endowed with both reaſon and freewill, is commanded to make uſe of thoſe faculties in the general regulation of his behaviour.

Of Laws
in general.

Man, conſidered as a creature, muſt neceſſarily be ſubject to the laws of his Creator, for he is entirely a dependent being. A being, independent of any other; has no rule to purſue but ſuch as he preſcribes to himſelf : but a ſtate of dependance will inevitably oblige the inferior to take the will of him on whom he depends as the rule of his conduct ; not indeed in every particular, but in all thoſe points wherein his dependance conſiſts. This principle therefore has more or leſs extent and effect, in proportion as the ſuperiority of the one and the dependence of the other is greater or leſs, abſolute or limited. And conſequently, as man depends abſolutely upon his Maker for every thing, it is neceſſary that he ſhould in all points conform to his Maker's will.

3
Law of
nature.

This will of his Maker is called the *law of nature.* For as God, when he created matter, and endued it with a principle of mobility, eſtabliſhed certain rules for the perpetual direction of that motion ; ſo, when he created man, and endued him with freewill to conduct himſelf in all parts of life, he laid down certain immutable laws of human nature, whereby that freewill is in ſome degree regulated and reſtrained, and gave him alſo the faculty of reaſon to diſcover the purport of thoſe laws.

Conſidering the Creator only as a being of infinite power, he was able unqueſtionably to have preſcribed whatever laws he pleaſed to his creature man, however unjuſt or ſevere. But as he is alſo a Being of infinite wiſdom, he has laid down only ſuch laws as were founded in thoſe relations of juſtice that exiſted in the nature of things antecedent to any poſitive precept. Theſe are the eternal immutable laws of good and evil, to which the Creator himſelf in all his diſpenſations conforms ; and which he has enabled human reaſon to diſcover, ſo far as they are neceſſary for the conduct of human actions. Such, among others, are theſe principles : That we ſhould live honeſtly, ſhould hurt nobody, and ſhould render to every one his due ; to which three general precepts Juſtinian has reduced the whole doctrine of law.

But if the diſcovery of theſe firſt principles of the law of nature depended only upon the due exertion of right reaſon, and could not otherwiſe be obtained than by a chain of metaphyſical diſquiſitions, mankind would have wanted ſome inducement to have quickened their inquiries, and the greater part of the world would have reſted content in mental indolence, and ignorance its inſeparable companion. As therefore the Creator is a being, not only of infinite power and wiſdom, but alſo of infinite goodneſs, he has been pleaſed ſo to contrive the conſtitution and frame of humanity, that we ſhould want no other prompter to inquire after and purſue the rule of right, but only our own ſelf-love, that univerſal principle of action. For he has ſo intimately connected, ſo inſeparably interwoven, the laws of eternal juſtice with the happineſs of each individual, that the latter cannot be attained but by obſerving the former; and if the former be punctually obeyed, it cannot but induce the latter. In conſequence of which mutual connection of juſtice and human felicity, he has not perplexed the law of nature with a multitude of abſtracted rules and precepts, referring merely to the fitneſs or unfitneſs of things, as ſome have vainly ſurmiſed ; but has graciouſly reduced the rule of obedience to this one paternal precept, "that man ſhould purſue his own happineſs." This is the foundation of what we call *ethics*, or *natural law* *. For the ſeveral articles into which it is branched in our ſyſtems, amount to no more than demonſtrating, that this or that action tends to man's real happineſs; and therefore very juſtly concluding, that the performance of it is a part of the law of nature; or, on the other hand, that this or that action is deſtructive of man's real happineſs, and therefore that the law of nature forbids it.

---

* See *Morality.*

This law of nature, being coëval with mankind, and dictated by God himſelf, is of courſe ſuperior in obligation to any other. It is binding all over the globe, in all countries, and at all times: no human laws are of any validity, if contrary to this; and ſuch of them as are valid derive all their force, and all their authority, mediately or immediately, from this original.

But in order to apply this to the particular exigencies of each individual, it is ſtill neceſſary to have recourſe to reaſon: whoſe office it is to diſcover, as was before obſerved, what the law of nature directs in every circumſtance of life; by conſidering, what method will tend the moſt effectually to our own ſubſtantial happineſs. And if our reaſon were always, as in our firſt anceſtor before his tranſgreſſion, clear and perfect, unruffled by paſſions, unclouded by prejudice, unimpaired by diſeaſe or intemperance, the taſk would be pleaſant and eaſy; we ſhould need no other guide but this. But every man now finds the contrary in his own experience; that his reaſon is corrupt, and his underſtanding full of ignorance and error.

4
Law of revelation.

This has given manifold occaſion for the benign interpoſition of Divine Providence; which, in compaſſion to the frailty, the imperfection, and the blindneſs of human reaſon, hath been pleaſed, at ſundry times and in divers manners, to diſcover and enforce its laws by an immediate and direct revelation. The doctrines thus delivered, we call the *revealed* or *divine law*, and they are to be found only in the Holy Scriptures. Theſe precepts, when revealed, are found upon compariſon to be really a part of the original law of nature, as they tend in all their conſequences to man's felicity. But we are not from thence to conclude, that the knowledge of theſe truths was attainable by reaſon in its preſent corrupted ſtate; ſince we find, that, until they were revealed, they were hid from the wiſdom of ages. As then the moral precepts of this law are indeed of the ſame original with thoſe of the law of nature, ſo their intrinſic obligation is of equal ſtrength and perpetuity. Yet undoubtedly the revealed law is of infinitely more authenticity than that moral ſyſtem which is framed by ethical writers, and denominated the *natural law:* becauſe one is the law of nature, expreſsly declared ſo to be by God himſelf; the other is only what, by the aſſiſtance of human reaſon, we imagine to be that law. If we could be as certain of the latter as we are of the former, both would have an equal authority: but till then they can never be put in any competition together.

Upon theſe two foundations, the law of nature and the law of revelation, depend all human laws; that is to ſay, no human laws ſhould be ſuffered to contradict theſe. There are, it is true, a great number of indifferent points, in which both the divine law and the natural leave a man at his own liberty; but which are found neceſſary, for the benefit of ſociety, to be reſtrained within certain limits. And herein it is that human laws have their greateſt force and efficacy: for, with regard to ſuch points as are not indifferent, human laws are only declaratory of, and act in ſubordination to, the former. To inſtance in the caſe of murder: this is expreſsly forbidden by the divine, and demonſtrably by the natural, law; and from theſe prohibitions ariſes the true unlawfulneſs of this crime. Thoſe human laws that annex a puniſhment to it, do not at all increaſe its moral guilt, or ſuperadd any freſh obligation in *foro conſcientiæ* to abſtain from its perpetration. Nay, if any human law ſhould allow or enjoin us to commit it, we are bound to tranſgreſs that human law, or elſe we muſt offend both the natural and the divine. But with regard to matters that are in themſelves indifferent, and are not commanded or forbidden by thoſe ſuperior laws; ſuch, for inſtance, as exporting of wool into foreign countries; here the inferior legiſlature has ſcope and opportunity to interpoſe, and to make that action unlawful which before was not ſo.

5
Law of nations.

If man were to live in a ſtate of nature, unconnected with other individuals, there would be no occaſion for any other laws than the law of nature and the law of God. Neither could any other law poſſibly exiſt: for a law always ſuppoſes ſome ſuperior who is to make it; and in a ſtate of nature we are all equal, without any other ſuperior but him who is the Author of our being. But man was formed for ſociety; and, as is demonſtrated by the writers on this ſubject, is neither capable of living alone, nor indeed has the courage to do it. However, as it is impoſſible for the whole race of mankind to be united in one great ſociety, they muſt neceſſarily divide into many; and form ſeparate ſtates, commonwealths, and nations, entirely independent of each other, and yet liable to a mutual intercourſe. Hence ariſes a third kind of law to regulate this mutual intercourſe, called *the law of nations:* which, as none of theſe ſtates will acknowledge a ſuperiority in the other, cannot be dictated by either; but depends entirely upon the rules of natural law, or upon mutual compacts, treaties, leagues, and agreements, between theſe ſeveral communities: in the conſtruction alſo of which compacts we have no other rule to reſort to but the law of nature; being the only one to which both communities are equally ſubject: and therefore the civil law very juſtly obſerves, that *quod naturalis ratio inter omnes homines conſtituit, vocatur jus gentium.*

6
Municipal or civil law.

To the conſideration, then, of the law of nature, the revealed law, and the law of nations, ſucceeds that of the municipal or civil law; that is, the rule by which particular diſtricts, communities, or nations, are governed; being thus defined by Juſtinian, "*jus civile eſt quod quiſque ſibi populus conſtituit.*" We call it *municipal* law, in compliance with common ſpeech; for though, ſtrictly, that expreſſion denotes the particular cuſtoms of one ſingle *municipium* or free town, yet it may with ſufficient propriety be applied to any one ſtate or nation which is governed by the ſame laws and cuſtoms.

7
Defined.

Municipal law, thus underſtoood, is properly defined to be "a rule of civil conduct preſcribed by the ſupreme power in a ſtate, commanding what is right, and prohibiting what is wrong." Let us endeavour to explain its ſeveral properties, as they ariſe out of this definition.

8
Its firſt property.

And, firſt, it is a *rule:* not a tranſient ſudden order from a ſuperior to or concerning a particular perſon; but ſomething permanent, uniform and univerſal. Therefore a particular act of the legiſlature to confiſcate the goods of Titius, or to attaint him of high treaſon, does not enter into the idea of a municipal law: for the operation of this act is ſpent upon Titius only, and has no relation to the community in general; it is rather a ſentence than a law. But an act to declare that the crime of which Titius is accuſed ſhall be deemed high treaſon; this has permanency, uniformity, and univerſality, and therefore is properly a *rule*. It is alſo called a *rule*, to diſtinguiſh it from *advice* or *counſel*, which we are at liberty to follow or not as we ſee proper, and to judge upon the reaſonableneſs or unreaſonableneſs of the thing adviſed: whereas our obedience to the law depends not upon *our approbation*, but upon the *Maker's will*. Counſel is only matter of perſuaſion, law is matter of injunction; counſel acts only upon the willing, law upon the unwilling alſo.

It is alſo called a *rule*, to diſtinguiſh it from a *compact* or *agreement*; for a compact is a promiſe proceeding from us, law is a command directed to us. The language of a compact is, "I will, or will not, do this;" that of a law is, "Thou ſhalt, or ſhalt not, do it." It is true there is an obligation which a compact carries with it, equal in point of conſcience to that of a law; but then the original of the obligation is different. In compacts, we ourſelves determine and promiſe what ſhall be done, before we are obliged to do it; in laws, we are obliged to act without ourſelves determining or promiſing any thing at all. Upon theſe accounts law is defined to be "a rule."

9 Second property.

Municipal law is alſo "a rule of *civil conduct*." This diſtinguiſhes municipal law from the natural or revealed: the former of which is the rule of moral conduct; and the latter not only the rule of moral conduct, but alſo of faith. Theſe regard man as a creature; and point out his duty to God, to himſelf, and to his neighbour, conſidered in the light of an individual. But municipal or civil law regards him alſo as a citizen, and bound to other duties towards his neighbour, than thoſe of mere nature and religion: duties, which he has engaged in by enjoying the benefits of the common union; and which amount to no more, than that he do contribute, on his part, to the ſubſiſtence and peace of the ſociety.

10 Third property.

It is likewiſe "a rule *preſcribed*." Becauſe a bare reſolution, confined in the breaſt of the legiſlator, without manifeſting itſelf by ſome external ſign, can never be properly a law. It is requiſite that this reſolution be notified to the people who are to obey it. But the manner in which this notification is to be made, is matter of very great indifference. It may be notified by univerſal tradition and long practice, which ſuppoſes a previous publication, and is the caſe of the common law of England and of Scotland. It may be notified *viva voce*, by officers appointed for that purpoſe; as is done with regard to proclamations, and ſuch acts of parliament as are appointed to be publicly read in churches and other aſſemblies. It may, laſtly, be notified by writing, printing, or the like; which is the general courſe taken with all the acts of parliament. Yet, whatever way is made uſe of, it is incumbent on the promulgators to do it in the moſt public and perſpicuous manner; not like Caligula, who (according to Dio Caſſius) wrote his laws in a very ſmall character, and hung them up upon high pillars, the more effectually to enſnare the people. There is ſtill a more unreaſonable method than this, which is called making of laws *ex poſt facto*; when after an action (indifferent in itſelf) is committed, the legiſlator then for the firſt time declares it to have been a crime, and inflicts a puniſhment upon the perſon who has committed it. Here it is impoſſible that the party could foreſee, that an action, innocent when it was done, ſhould be afterwards converted to guilt by a ſubſequent law: he had therefore no cauſe to abſtain from it; and all puniſhment for not abſtaining muſt of conſequence be cruel and unjuſt. All laws ſhould be therefore made to commence *in futuro*, and be notified before their commencement; which is implied in the term "preſcribed." But when this rule is in the uſual manner notified or preſcribed, it is then the ſubject's buſineſs to be thoroughly acquainted therewith; for if ignorance, of what he might know, were admitted as a legitimate excuſe, the laws would be of no effect, but might always be eluded with impunity.

11 Fourth property.

But further: Municipal law is "a rule of civil conduct preſcribed *by the ſupreme power in a ſtate*." For legiſlature, as was before obſerved, is the greateſt act of ſuperiority that can be exerciſed by one being over another. Wherefore it is requiſite to the very eſſence of a law, that it be made by the ſupreme power. Sovereignty and legiſlature are indeed convertible terms; one cannot ſubſiſt without the other.

This will naturally lead us into a ſhort inquiry concerning the nature of ſociety and civil government; and the natural inherent right that belongs to the ſovereignty of a ſtate, wherever that ſovereignty be lodged, of making and enforcing laws.

12 Civil ſociety.

The only true and natural foundations of ſociety are the wants and fears of individuals. Not that we can believe, with ſome theoretical writers, that there ever was a time when there was no ſuch thing as ſociety; and that, from the impulſe of reaſon, and through a ſenſe of their wants and weakneſſes, individuals met together in a large plain, entered into an original contract, and choſe the talleſt man preſent to be their governor. This notion, of an actually exiſting unconnected ſtate of nature, is too wild to be ſeriouſly admitted: and beſides, it is plainly contradictory to the revealed accounts of the primitive origin of mankind, and their preſervation 2000 years afterwards; both which were effected by the means of ſingle families. Theſe formed the firſt ſociety among themſelves, which every day extended its limits; and when it grew too large to ſubſiſt with convenience in that paſtoral ſtate wherein the patriarchs appear to have lived, it neceſſarily ſubdivided itſelf by various migrations into more. Afterwards, as agriculture increaſed, which employs and can maintain a much greater number of hands, migrations became leſs frequent; and various tribes, which had formerly ſeparated, reunited again; ſometimes by compulſion and conqueſt, ſometimes by accident, and ſometimes perhaps by compact. But though ſociety had not its formal beginning from any convention of individuals, actuated by their wants and their fears; yet it is the ſenſe of their weakneſs and imperfection that keeps mankind together; that demonſtrates the neceſſity of this union; and that therefore is the ſolid and natural foundation, as well as the cement, of ſociety. And this is what we mean by the original contract of ſociety; which, though perhaps in no inſtance it has ever been formally expreſſed at the firſt inſtitution of a ſtate, yet in nature and reaſon muſt always be underſtood and implied in the very act of aſſociating together: namely, that the whole ſhould protect all its parts, and that every part ſhould pay obedience to the will of the whole; or, in other words, that the community ſhould guard the rights of each individual member, and that (in return for this protection) each individual ſhould ſubmit to the laws of the community; without which ſubmiſſion of all, it was impoſſible that protection could be certainly extended to any.

13 Government.

For when ſociety is once formed, government reſults of courſe, as neceſſary to preſerve and to keep that ſociety in order. Unleſs ſome ſuperior be conſtituted, whoſe commands and deciſions all the members are bound to obey, they would ſtill remain as in a ſtate of nature, without any judge upon earth to define their ſeveral rights, and redreſs their ſeveral wrongs. But as all the members of ſociety are naturally equal, it may be aſked, In whoſe hands are the reins of government to be entruſted? To this the general anſwer is eaſy; but the application of it to particular caſes has occaſioned one half of thoſe miſchiefs which are apt to proceed from miſguided political zeal. In general, all mankind will agree, that government ſhould be repoſed in ſuch perſons, in whom thoſe qualities are moſt likely to be found, the perfection of which is among the attributes of him who is emphatically ſtyled the *Supreme Being*; the three grand requiſites, namely, of wiſdom, of goodneſs, and of power: wiſdom, to diſcern the real intereſt of the community; goodneſs, to endeavour always to purſue that real intereſt; and ſtrength or power to carry this knowledge and intention into action. Theſe are the natural foundations of ſovereignty, and theſe are the requiſites that ought to be found in every well conſtituted frame of government.

How the ſeveral forms of government we now ſee in the world at firſt actually began, is matter of great uncertainty, and has occaſioned infinite diſputes. It is not our buſineſs or intention to enter into any of them. However they began, or by what right ſoever they ſubſiſt, there is and muſt be in all of them a ſupreme, irreſiſtible, abſolute, uncontrolled authority, in which the *jura ſummi imperii*, or the rights of ſovereignty, reſide. And this authority is placed in thoſe hands, wherein (according to the opinion of the founders of ſuch reſpective ſtates, either expreſsly given or collected from their tacit approbation) the qualities requiſite for ſupremacy, wiſdom, goodneſs, and power, are the moſt likely to be found.

14 Different forms thereof.

The political writers of antiquity will not allow more than three regular forms of government: the firſt, when the ſovereign power is lodged in an aggregate aſſembly conſiſting of all the members of a community which is called a *democracy*; the ſecond, when it is lodged in a council compoſed of ſelect members, and then it is ſtyled an *ariſtocracy*; the laſt, when it is entruſted in the hands of a ſingle perſon, and then it takes the name of a *monarchy*. All other ſpecies of government, they ſay, are either corruptions of, or reducible to, theſe three.

By the ſovereign power, as was before obſerved, is meant the making of laws; for wherever that power reſides, all others muſt conform to and be directed by it, whatever appearance the outward form and adminiſtration of the government may put on. For it is at any time in the option of the legiſlature to alter that form and adminiſtration by a new edict or rule, and to put the execution of the laws into whatever hands it pleaſes: and all the other powers of the ſtate muſt obey the legiſlative power in the execution of their ſeveral functions, or elſe the conſtitution is at an end.

In a democracy, where the right of making laws reſides in the people at large, public virtue or goodneſs of intention is more likely to be found than either of the other qualities of government. Popular aſſemblies are frequently fooliſh in their contrivance, and weak in their execution; but generally mean to do the thing that is right and juſt, and have always a degree of patriotiſm or public ſpirit. In ariſtocracies there is more wiſdom to be found than in the other forms of government; being compoſed, or intended to be compoſed, of the moſt experienced citizens: but there is leſs honeſty than in a republic, and leſs ſtrength than in a monarchy. A monarchy is indeed the moſt powerful of any, all the ſinews of government being knit and united together in the hand of the prince; but then there is imminent danger of his employing that ſtrength to improvident or oppreſſive purpoſes.

Thus theſe three ſpecies of government have all of them their ſeveral perfections and imperfections. Democracies are uſually the beſt calculated to direct the end of a law; ariſtocracies, to invent the means by which that end ſhall be obtained; and monarchies, to carry thoſe means into execution. And the ancients, as was obſerved, had in general no idea of any other permanent form of government but theſe three: for though Cicero declares himſelf of opinion, "*eſſe optime conſtitutam rempublicam, quæ ex tribus generibus illis, regali, optimo, et populari, ſit modice confuſa*;" yet Tacitus treats this notion of a mixed government, formed out of them all, and partaking of the advantages of each, as a viſionary whim, and one that, if effected, could never be laſting or ſecure.

15 Britiſh conſtitution.

But, happily for mankind, the Britiſh conſtitution has long remained, and we truſt will long continue, a ſtanding exception to the truth of this obſervation. For, as with them the executive power of the laws is lodged in a ſingle perſon, they have all the advantages of ſtrength and diſpatch that are to be found in the moſt abſolute monarchy: and, as the legiſlature of that kingdom is entruſted to three diſtinct powers, entirely independent of each other; firſt, the king; ſecondly, the lords ſpiritual and temporal, which is an ariſtocratical aſſembly of perſons ſelected for their piety, their birth, their wiſdom, their valour, or their property; and, thirdly, the houſe of commons, freely choſen by the people from among themſelves, which makes it a kind of democracy; as this aggregate body, actuated by different ſprings and attentive to different intereſts, compoſes the Britiſh parliament, and has the ſupreme diſpoſal of every thing, there can no inconvenience be attempted by either of the three branches, but may be withſtood by one of the other two, each branch being armed with a negative power ſufficient to repel any innovation which it ſhall think inexpedient or dangerous.

“Here, then, is lodged the ſovereignty of the Britiſh conſtitution; and lodged as beneficially as is poſſible for ſociety. For in no other ſhape could we be ſo certain of finding the three great qualities of government ſo well and ſo happily united. If the ſupreme power were lodged in any one of the three branches ſeparately, we muſt be expoſed to the inconveniences of either abſolute monarchy, ariſtocracy, or democracy; and ſo want two of the three principal ingredients of good polity, either virtue, wiſdom, or power. If it were lodged in any two of the branches; for inſtance, in the king and houſe of lords; our laws might be providently made and well executed, but they might not always have the good of the people in view: if lodged in the king and commons, we ſhould want that circumſpection and mediatory caution, which the wiſdom of the peers is to afford: if the ſupreme rights of legiſlature were lodged in the two houſes only, and the king had no negative upon their proceedings, they might be tempted to encroach upon the royal prerogative, or perhaps to aboliſh the kingly office, and thereby weaken (if not totally deſtroy) the ſtrength of the executive power. But the conſtitutional government of this iſland is ſo admirably tempered and compounded, that nothing can endanger or hurt it, but deſtroying the equilibrium of power between one branch of the legiſlature and the reſt. For if ever it ſhould happen, that the independence of any one of the three ſhould be loſt, or that it ſhould become ſubſervient to the views of either of the other two, there would ſoon be an end of our conſtitution. The legiſlature would be changed from that which was originally ſet up by the general conſent and fundamental act of the ſociety: and ſuch a change, however effected, is, according to Mr Locke (who perhaps carries his theory too far), at once an entire diſſolution of the bands of government; and the people are thereby reduced to a ſtate of anarchy, with liberty to conſtitute to themſelves a new legiſlative power.”

16 Having thus curſorily conſidered the three uſual ſpecies of government, and our own ſingular conſtitution ſelected and compounded from them all, we proceed to obſerve, that, as the power of making laws conſtitutes the ſupreme authority, ſo wherever the ſupreme authority in any ſtate reſides, it is the right of that authority to make laws; that is, in the words of our definition, *to preſcribe the rule of civil action.* And this may be diſcovered from the very end and inſtitution of civil ſtates. For a ſtate is a collective body, compoſed of a multitude of individuals, united for their ſafety and convenience, and intending to act together as one man. If it therefore is to act as one man, it ought to act by one uniform will. But, inaſmuch as political communities are made up of many natural perſons, each of whom has his particular will and inclination, theſe ſeveral wills cannot by any natural union be joined together, or tempered and diſpoſed into a laſting harmony, ſo as to conſtitute and produce that one uniform will of the whole. It can therefore be no otherwiſe produced than by a political union; by the conſent of all perſons to ſubmit their own private wills to the will of one man, or of one or more aſſemblies of men, to whom the ſupreme authority is entruſted; and this will of that one man, or aſſemblage of men, is in different ſtates, according to their different conſtitutions, underſtood to be law.

Thus far as to the right of the ſupreme power to make laws: but farther, it is its duty likewiſe. For ſince the reſpective members are bound to conform themſelves to the will of the ſtate, it is expedient that they receive directions from the ſtate declaratory of that its will. But as it is impoſſible, in ſo great a multitude, to give injunctions to every particular man, relative to each particular action, therefore the ſtate eſtabliſhes general rules, for the perpetual information and direction of all perſons in all points, whether of poſitive or negative duty: and this, in order that every man may know what to look upon as his own, what as another's; what abſolute and what relative duties are required at his hands; what is to be eſteemed honeſt, diſhoneſt, or indifferent; what degree every man retains of his natural liberty, and what he has given up as the price of the benefits of ſociety; and after what manner each perſon is to moderate the uſe and exerciſe of thoſe rights which the ſtate aſſigns him, in order to promote and ſecure the public tranquillity.

17 Second branch of the definition, illuſtrated.

From what has been advanced, the truth of the former branch of our definition is (we truſt) ſufficiently evident; that “municipal law is a rule of civil conduct, preſcribed *by the ſupreme power in a ſtate.*” We proceed now to the latter branch of it; that it is a rule ſo preſcribed, “commanding what is right, and prohibiting what is wrong.”

Now, in order to do this completely, it is firſt of all neceſſary that the boundaries of right and wrong be eſtabliſhed and aſcertained by law. And when this is once done, it will follow of courſe, that it is likewiſe the buſineſs of the law, conſidered as a rule of civil conduct, to enforce theſe rights, and to reſtrain or redreſs theſe wrongs. It remains therefore only to conſider, in what manner the law is ſaid to aſcertain the boundaries of right and wrong; and the methods which it takes to command the one and prohibit the other.

For this purpoſe, every law may be ſaid to conſiſt of ſeveral parts; one, declaratory; whereby the rights to be obſerved, and the wrongs to be eſchewed, are clearly defined and laid down: another, directory; whereby the ſubject is inſtructed and enjoined to obſerve thoſe rights, and to abſtain from the commiſſion of thoſe wrongs: a third, remedial; whereby a method is pointed out to recover a man's private rights, or redreſs his private wrongs: to which may be added a fourth, uſually termed the *ſanction* or *vindicatory* branch of the law; whereby it is ſignified what evil or penalty ſhall be incurred by ſuch as commit any public wrongs, and tranſgreſs or neglect their duty.

18 Declaratory part of the law.

With regard to the firſt of theſe, the *declaratory* part of the municipal law; this depends not ſo much upon the law of revelation or of nature, as upon the wiſdom and will of the legiſlator. This doctrine, which before was ſlightly touched, deſerves a more particular explication. Thoſe rights, then, which God and nature have eſtabliſhed, and are therefore called *natural rights,* ſuch as are life and liberty, need not the aid of human laws to be more effectually inveſted in every man than they are; neither do they receive any additional ſtrength when declared by the municipal laws to be inviolable. On the contrary, no human legiſlature has power to abridge or deſtroy them, unleſs the owner ſhall himſelf commit ſome act that amounts to a forfeiture. Neither do divine or natural *duties* (ſuch as, for inſtance, the worſhip of God, the maintenance of children, and the like) receive any ſtrong ſanction from being alſo declared to be duties by the law of the land. The caſe is the ſame as to crimes and miſdemeanours, that are forbidden by the ſuperior laws, and therefore ſtyled *mala in ſe*, ſuch as murder, theft, and perjury; which contract no additional turpitude from being declared unlawful by the inferior legiſlature. For that legiſlature in all theſe caſes acts only, as was before obſerved, in ſubordination to the great Lawgiver, tranſcribing and publiſhing his precepts. So that, upon the whole, the declaratory part of the municipal law has no force or operation at all, with regard to actions that are naturally and intrinſically right or wrong.

But with regard to things in themſelves indifferent, the caſe is entirely altered. Theſe become either right or wrong, juſt or unjuſt, duties or miſdemeanors, according as the municipal legiſlator ſees proper, for promoting the welfare of the ſociety, and more effectually carrying on the purpoſes of civil life. Thus our own common law has declared, that the goods of the wife do inſtantly upon marriage become the property and right of the huſband; and our ſtatute law has declared all monopolies a public offence: yet that right, and this offence, have no foundation in nature; but are merely created by the law, for the purpoſes of civil ſociety. And ſometimes, where the thing itſelf has its riſe from the law of nature, the particular circumſtances and mode of doing it become right or wrong, as the laws of the land ſhall direct. Thus, for inſtance, in civil duties; obedience to ſuperiors is the doctrine of revealed as well as natural religion: but who thoſe ſuperiors ſhall be, and in what circumſtances, or to what degrees they ſhall be obeyed, is the province of human laws to determine. And ſo, as to injuries or crimes, it muſt be left to our own legiſlature to decide, in what caſes the ſeizing another's cattle ſhall amount to the crime of robbery; and where it ſhall be a juſtifiable action, as when a landlord takes them by way of diſtreſs for rent.

19 Directory part. Thus much for the declaratory part of the municipal law: and the *directory* ſtands much upon the ſame footing; for this virtually includes the former, the declaration being uſually collected from the direction. The law that ſays, "Thou ſhalt not ſteal," implies a declaration that ſtealing is a crime. And we have ſeen, that, in things naturally indifferent, the very eſſence of right and wrong depends upon the direction of the laws to do or to omit them.

20 Remedial part. The *remedial* part of a law is ſo neceſſary a conſequence of the former two, that laws muſt be very vague and imperfect without it. For in vain would rights be declared, in vain directed to be obſerved, if there were no method of recovering and aſſerting thoſe rights when wrongfully with-held or invaded. This is what we mean properly, when we ſpeak of the protection of the law. When, for inſtance, the declaratory part of the law has ſaid, "that the field or inheritance which belonged to Titius's father is veſted by his death in Titius," and the directory part has "forbidden any one to enter on another's property without the leave of the owner;" if Gaius after this will preſume to take poſſeſſion of the land, the remedial part of the law will then interpoſe its office; will make Gaius reſtore the poſſeſſion to Titius, and alſo pay him damages for the invaſion.

With regard to the ſanction of laws, or the evil that may attend the breach of public duties; it is obſerved, that human legiſlators have for the moſt part choſen to make the ſanction of their laws rather vindicatory than remuneratory, or to conſiſt rather in puniſhments than in actual particular rewards: Becauſe, in the firſt place, the quiet enjoyment and protection of all our civil rights and liberties, which are the ſure and general conſequence of obedience to the municipal law, are in themſelves the beſt and moſt valuable of all rewards: becauſe alſo, were the exerciſe of every virtue to be inforced by the propoſal of particular rewards, it were impoſſible for any ſtate to furniſh ſtock enough for ſo profuſe a bounty: and farther, becauſe the dread of evil is a much more forcible principle of human actions than the proſpect of good. For which reaſons, though a prudent beſtowing of rewards is ſometimes of exquiſite uſe, yet we find that thoſe civil laws, which enforce and enjoin our duty, do ſeldom, if ever, propoſe any privilege or gift to ſuch as obey the law; but do conſtantly come armed with a penalty denounced againſt tranſgreſſors, either expreſsly defining the nature and quantity of the puniſhment, or elſe leaving it to the diſcretion of the judges, and thoſe who are intruſted with the care of putting the laws in execution.

21 Vindicatory parts. Of all the parts of a law the moſt effectual is the *vindicatory*. For it is but loſt labour to ſay, "Do this, or avoid that," unleſs we alſo declare, "This ſhall be the conſequence of your non-compliance." We muſt therefore obſerve, that the main ſtrength and force of a law conſiſts in the penalty annexed to it. Herein is to be found the principal obligation of human laws.

Legiſlators and their laws are ſaid to *compel* and *oblige*: not that, by any natural violence, they ſo conſtrain a man as to render it impoſſible for him to act otherwiſe than as they direct, which is the ſtrict ſenſe of obligation; but becauſe, by declaring and exhibiting a penalty againſt offenders, they bring it to paſs that no man can eaſily chooſe to tranſgreſs the law; ſince, by reaſon of the impending correction, compliance is in a high degree preferable to diſobedience. And, even where rewards are propoſed as well as puniſhments threatened, the obligation of the law ſeems chiefly to conſiſt in the penalty: for rewards, in their nature, can only perſuade and allure; nothing is compulſory but puniſhment.

It is true, it hath been holden, and very juſtly, by the principal of our ethical writers, that human laws are binding upon men's conſciences. But if that were the only or moſt forcible obligation, the good only would regard the laws, and the bad would ſet them at defiance. And, true as this principle is, it muſt ſtill be underſtood with ſome reſtriction. It holds, we apprehend, as to *rights*; and that, when the law has determined the field to belong to Titius, it is a matter of conſcience no longer to with-hold or to invade it. So alſo in regard to *natural duties*, and ſuch offences as are *mala-*

mala in ſe: here we are bound in conſcience, becauſe we are bound by ſuperior laws, before thoſe human laws were in being, to perform the one, and abſtain from the other. But in relation to thoſe laws which enjoin only poſitive duties, and forbid only ſuch things as are not *mala in ſe*, but *mala prohibita* merely, without any intermixture of moral guilt, annexing a penalty to non-compliance; here ſeems to be conſcience no farther concerned, than by directing a ſubmiſſion to the penalty, in caſe of our breach of thoſe laws: for otherwiſe the multitude of penal laws in a ſtate would not only be looked upon as an impolitic, but would alſo be a very wicked, thing; if every ſuch law were a ſnare for the conſcience of the ſubject. But in theſe caſes the alternative is offered to every man; "either abſtain from this, or ſubmit to ſuch a penalty:" and his conſcience will be clear, which ever ſide of the alternative he thinks proper to embrace. Thus, by the ſtatutes for preſerving the game in Britain, a penalty is denounced againſt every unqualified perſon that kills a hare, and againſt every perſon who poſſeſſes a partridge in Auguſt. And ſo too, by other ſtatutes, pecuniary penalties are inflicted for exerciſing trades without ſerving an apprenticeſhip thereto, for erecting cottages without annexing four acres of land to each, for not burying the dead in woollen, for not performing ſtatute-work on the public roads, and for innumerable other poſitive miſdemeanors. Now theſe prohibitory laws do not make the tranſgreſſion a moral offence, or ſin: the only obligation in conſcience is to ſubmit to the penalty, if levied. It muſt, however, be obſerved, that we are here ſpeaking of laws that are ſimply and purely penal, where the thing forbidden or enjoined is wholly a matter of indifference, and where the penalty inflicted is an adequate compenſation for the civil inconvenience ſuppoſed to ariſe from the offence. But where diſobedience to the law involves in it alſo any degree of public miſchief or private injury, there it falls within our former diſtinction, and is alſo an offence againſt conſcience.

We have now gone through the definition laid down of a municipal law; and have ſhown that it is "a rule—of civil conduct—preſcribed—by the ſupreme power in a ſtate—commanding what is right, and prohibiting what is wrong:" in the explication of which we have endeavoured to interweave a few uſeful principles, concerning the nature of civil government, and the obligation of human laws. Before we conclude this part, it may not be amiſs to add a few obſervations concerning the interpretations of laws.

22
Of the interpretation of laws.

When any doubt aroſe upon the conſtruction of the Roman laws, the uſage was to ſtate the caſe to the emperor in writing, and take his opinion upon it. This was certainly a bad method of interpretation. To interrogate the legiſlature to decide particular diſputes, is not only endleſs, but affords great room for partiality and oppreſſion. The anſwers of the emperor were called his reſcripts, and theſe had in ſucceeding caſes the force of perpetual laws; though they ought to be carefully diſtinguiſhed, by every rational civilian, from thoſe general conſtitutions which had only the nature of things for their guide. The emperor Macrinus, as his hiſtorian Capitolinus informs us, had once reſolved to aboliſh theſe reſcripts, and retain only the general edicts: he could not bear that the haſty and crude anſwers of ſuch princes as Commodus and Caracalla ſhould be reverenced as laws. But Juſtinian thought otherwiſe, and he has preſerved them all. In like manner the canon laws, or decretal epiſtles of the popes, are all of them reſcripts in the ſtricteſt ſenſe. Contrary to all true forms of reaſoning, they argue from particulars to generals.

The faireſt and moſt rational method to interpret the will of the legiſlator, is by exploring his intentions at the time when the law was made, by ſigns the moſt natural and probable. And theſe ſigns are either the words, the context, the ſubject-matter, the effects and conſequence, or the ſpirit and reaſon of the law. Let us take a ſhort view of them all.

23 1. *Words* are generally to be underſtood in their uſual and moſt known ſignification; not ſo much regarding the propriety of grammar, as their general and popular uſe. Thus the law mentioned by Puffendorf, which forbad a layman to lay hands on a prieſt, was adjudged to extend to him who had hurt a prieſt with a weapon. Again: Terms of art, or technical terms, muſt be taken according to the acceptation of the learned in each art, trade, and ſcience. So in the act of ſettlement, where the crown of England is limited "to the princeſs of Sophia, and the heirs of her body, being Proteſtants, it becomes neceſſary to call in the aſſiſtance of lawyers, to aſcertain the preciſe idea of the words "heirs of her body;" which in a legal ſenſe compriſe only certain of her lineal deſcendants. Laſtly, where words are clearly repugnant in two laws, the latter law takes place of the elder; *leges poſteriores priores contrarias abrogant*, is a maxim of univerſal law, as well as of our own conſtitutions. And accordingly it was laid down by a law of the twelve tables at Rome, *Quod populus poſtremum juſſit, id jus ratum eſto.*

24 2. If words happen to be ſtill dubious, we may eſtabliſh their meaning from the *context*; with which it may be of ſingular uſe to compare a word or a ſentence, whenever they are ambiguous, equivocal, or intricate. Thus the proëme, or preamble, is often called in to help the conſtruction of an act of parilament. Of the ſame nature and uſe is the compariſon of a law with other laws that are made by the ſame legiſlator, that have ſome affinity with the ſubject, or that expreſsly relate to the ſame point. Thus, when the law of England declares murder to be felony without benefit of clergy, we muſt reſort to the ſame law of England to learn what the benefit of clergy is: and, when the common law cenſures ſimoniacal contracts, it affords great light to the ſubject to conſider what the canon law has adjudged to be ſimony.

25 3. As to the *ſubject-matter*, words are always to be underſtood as having a regard thereto; for that is always ſuppoſed to be in the eye of the legiſlator, and all his expreſſions directed to that end. Thus, when a law of Edward III. forbids all eccleſiaſtical perſons to purchaſe proviſions at Rome, it might ſeem to prohibit the buying of grain and other victual; but when we conſider that the ſtatute was made to repreſs the uſurpations of the papal ſee, and that the nominations to benefices by the Pope were called *proviſions*, we ſhall ſee that the reſtraint is intended to be laid upon ſuch proviſions only.

26 4. As to the effects and *conſequence*, the rule is,

That where words bear either none, or a very abſurd ſignification, if literally underſtood, we muſt a little deviate from the received ſenſe of them. Therefore the Bolognian law, mentioned by Puffendorf, which enacted "that whoever drew blood in the ſtreets ſhould be puniſhed with the utmoſt ſeverity," was held after long debate not to extend to the ſurgeon who opened the vein of a perſon that fell down in the ſtreet with a fit.

27 5. But, laſtly, the moſt univerſal and effectual way of diſcovering the true meaning of a law, when the words are dubious, is by conſidering the *reaſon* and *ſpirit* of it, or the cauſe which moved the legiſlator to enact it. For when this reaſon ceaſes, the law itſelf ought likewiſe to ceaſe with it. An inſtance of this is given in a caſe put by Cicero, or whoever was the author of the rhetorical treatiſe inſcribed to Herennius. There was a law, That thoſe who in a ſtorm forſook the ſhip ſhould forfeit all property therein, and the ſhip and lading ſhould belong entirely to thoſe who ſtaid in it. In a dangerous tempeſt, all the mariners forſook the ſhip, except only one ſick paſſenger, who by reaſon of his diſeaſe was unable to get out and eſcape. By chance the ſhip came ſafe to port. The ſick man kept poſſeſſion, and claimed the benefit of the law. Now here all the learned agree, that the ſick man is not within the reaſon of the law; for the reaſon of making it was, to give encouragement to ſuch as ſhould venture their lives to ſave the veſſel: but this is a merit which he could never pretend to, who neither ſtaid in the ſhip upon that account, nor contributed any thing to its preſervation.

[28] 34 Equity. From this method of interpreting laws by the reaſon of them, ariſes what we call *equity*: which is thus defined by Grotius, "the correction of that, wherein the law (by reaſon of its univerſality) is deficient." For ſince in laws all caſes cannot be foreſeen or expreſſed, it is neceſſary, that, when the general decrees of the law come to be applied to particular caſes, there ſhould be ſomewhere a power veſted of defining thoſe circumſtances, which (had they been foreſeen) the legiſlator himſelf would have expreſſed. And theſe are the caſes which, according to Grotius, "*lex non exacte definit, ſed arbitrio boni viri permittit.*"

Equity thus depending, eſſentially, upon the particular circumſtances of each individual caſe, there can be no eſtabliſhed rules and fixed precepts of equity laid down, without deſtroying its very eſſence, and reducing it to a poſitive law. And, on the other hand, the liberty of conſidering all caſes in an equitable light muſt not be indulged too far; leſt thereby we deſtroy all law, and leave the deciſion of every queſtion entirely in the breaſt of the judge. And law, without equity, though hard and diſagreeable, is much more deſirable for the public good, than equity without law; which would make every judge a legiſlator, and introduce almoſt infinite confuſion: as there would then be almoſt as many different rules of action laid down in our courts, as there are differences of capacity and ſentiment in the human mind.

35 Plan of the two following parts. HAVING thus conſidered the nature of laws in general, we ſhall proceed to give a view of the particular law; 1. Of England; 2. Of Scotland. The Engliſh law, however, being too extenſive to admit of detail in a body, we can only here give ſuch a ſketch of it as may be ſufficient to ſhow the connection of its parts; but the principal of theſe parts themſelves are explained at large, under their proper names, in the general alphabet.—A contrary method is followed with regard to the law of Scotland. This being leſs extenſive, is given in a body, with all its parts not only in regular connection, but ſufficiently explained; theſe parts, again, not being explained in the order of the alphabet, but marked with numerical references to their explanations in the ſyſtem.

Part II. THE LAW OF ENGLAND.

INTRODUCTION.

THE municipal law of England, or the rule of civil conduct preſcribed to the inhabitants of that kingdom, may with ſufficient propriety be divided into two kinds: the *lex non ſcripta*, the unwritten or common law; and the *lex ſcripta*, the written or ſtatute law.

36 Common law. The *lex non ſcripta*, or unwritten law, includes not only general cuſtoms, or the common law properly ſo called; but alſo the particular cuſtoms of certain parts of the kingdom, and likewiſe theſe particular laws that are by cuſtom obſerved only in certain courts and juriſdictions.

In calling theſe parts of the law *leges non ſcriptæ*, we would not be underſtood as if all thoſe laws were at preſent merely oral, or communicated from the former ages to the preſent ſolely by word of mouth. It is true indeed, that in the profound ignorance of letters which formerly overſpread the whole weſtern world, all laws were entirely traditional; for this plain reaſon, that the nations among which they prevailed had but little idea of writing. Thus the Britiſh as well as the Gallic druids committed all their laws as well as learning to memory; and it is ſaid of the primitive Saxons here, as well as their brethren on the continent, that *leges ſola memoria et uſu retinebant*. But, with us at preſent, the monuments and evidences of our legal cuſtoms are contained in the records of the ſeveral courts of juſtice, in books of reports and judicial deciſions, and in the treatiſes of learned ſages of the profeſſion, preſerved and handed down to us from the times of higheſt antiquity. However, we therefore ſtyle theſe parts of our law *leges non ſcriptæ*, becauſe their original inſtitution and authority are not ſet down in writing, as acts of parliament are; but they receive their binding power, and the force of laws, by long and immemorial uſage, and by their univerſal reception throughout the kingdom; in like manner as Aulus Gellius defines the *jus non ſcriptum* to be that which is *tacito et illiterato hominum conſenſu et moribus expreſſum*.

Our ancient lawyers, and particularly Forteſcue, inſiſt with abundance of warmth, that theſe cuſtoms are as old as the primitive Britons, and continued down through the ſeveral mutations of government and inhabitants, to the preſent time, unchanged and unadulterated. This may be the caſe as to ſome. But in general, as Mr Selden in his notes obſerves, this aſſertion muſt be underſtood with many grains of allowance; and ought only to ſignify, as the truth ſeems to be, that there never was any formal exchange of one ſyſtem of laws for another: though doubtleſs, by the intermixture of adventitious nations, the Romans, the Picts, the Saxons, the Danes, and the Normans, they muſt have inſenſibly introduced and incorporated many of their own cuſtoms with thoſe that were before eſtabliſhed; thereby, in all probability, improving the texture and wiſdom of the whole, by the accumulated wiſdom of divers particular countries. Our laws, ſaith lord Bacon, are mixed as our language; and as our language is ſo much the richer, the laws are the more complete.

And indeed our antiquarians and firſt hiſtorians do all poſitively aſſure us, that our body of laws is of this compounded nature. For they tell us, that in the time of Alfred the local cuſtoms of the ſeveral provinces of the kingdom were grown ſo various, that he found it expedient to compile his dome book, or *liber judicialis*, for the general uſe of the whole kingdom. This book is ſaid to have been extant ſo late as the reign of Edward IV. but is now unfortunately loſt. It contained, we may probably ſuppoſe, the principal maxims of the common law, the penalties for miſdemeanors, and the forms of judicial proceedings. Thus much may at leaſt be collected from that injunction to obſerve it, which we find in the laws of king Edward the elder, the ſon of Alfred. *Omnibus qui reipublicæ præſunt etiam atque etiam mando, ut omnibus æquos ſe præbeant judices, perinde ac in judiciali libro ſcriptum habetur: nec quiquam formident quin jus commune audacter liberèque dicant.*

But the irruption and eſtabliſhment of the Danes in England, which followed ſoon after, introduced new cuſtoms, and cauſed this code of Alfred in many provinces to fall into diſuſe, or at leaſt to be mixed and debaſed with other laws of a coarſer alloy. So that, about the beginning of the 11th century there were three principal ſyſtems of laws prevailing in different diſtricts. 1. The *Mercen Lage*, or Mercian laws, which were obſerved in many of the inland counties, and thoſe bordering on the principality of Wales, the retreat of the ancient Britons; and therefore very probably intermixed with the Britiſh or Druidical cuſtoms. 2. The *Weſt Saxon Lage*, or laws of the Weſt Saxons, which obtained in the counties to the ſouth and weſt of the iſland, from Kent to Devonſhire. Theſe were probably much the ſame with the laws of Alfred abovementioned, being the municipal law of the far moſt conſiderable part of his dominions, and particularly including Berkſhire, the ſeat of his peculiar reſidence. 3. The *Dane Lage*, or Daniſh law, the very name of which ſpeaks its original and compoſition. This was principally maintained in the reſt of the midland counties, and alſo on the eaſtern coaſt, the part moſt expoſed to the viſits of that piratical people. As for the very northern provinces, they were at that time under a diſtinct government.

Out of theſe three laws, Roger Hoveden and Ranulphus Ceſtrenſis inform us, king Edward the confeſſor extracted one uniform law, or digeſt of laws, to be obſerved throughout the whole kingdom; though Hoveden and the author of an old manuſcript chronicle aſſure us likewiſe, that this work was projected and begun by his grandfather king Edgar. And indeed a general digeſt of the ſame nature has been conſtantly found expedient, and therefore put in practice by other great nations, which were formed from an aſſemblage of little provinces, governed by peculiar cuſtoms. As in Portugal, under king Edward, about the beginning of the 15th century. In Spain, under Alonzo X. who about the year 1250 executed the plan of his father St Ferdinand, and collected all the provincial cuſtoms into one uniform law, in the celebrated code entitled *las partidas*. And in Sweden, about the ſame era, a univerſal body of common law was compiled out of the particular cuſtoms eſtabliſhed by the laghman of every province, and entitled the *land's lagh*, being analogous to the common law of England.

Both theſe undertakings, of king Edgar and Edward the Confeſſor, ſeem to have been no more than a new edition, or freſh promulgation, of Alfred's code or dome-book, with ſuch additions and improvements as the experience of a century and an half had ſuggeſted. For Alfred is generally ſtyled by the ſame hiſtorians the *legum Anglicanarum conditor*, as Edward the confeſſor is the *reſtitutor*. Theſe, however, are the laws which Engliſh hiſtories ſo often mention under the name of the *laws of Edward the Confeſſor*; which our anceſtors ſtruggled ſo hardly to maintain, under the firſt princes of the Norman line; and which ſubſequent princes ſo frequently promiſed to keep and to reſtore, as the moſt popular act they could do, when preſſed by foreign emergencies or domeſtic diſcontents. Theſe are the laws, that ſo vigorouſly withſtood the repeated attacks of the civil law; which eſtabliſhed in the 12th century a new Roman empire over the moſt of the ſtates on the continent: ſtates that have loſt, and perhaps upon that account, their political liberties; while the free conſtitution of England, perhaps upon the ſame account, has been rather improved than debaſed. Theſe, in ſhort, are the laws which gave riſe and origin to that collection of maxims and cuſtoms which is now known by the name of the *common law*. 38 Common law. A name either given to it, in contradiſtinction to other laws, as the ſtatute law, the civil law, the law merchant, and the like; or, more probably, as a law common to all the realm, the *jus commune* or *folcright*, mentioned by king Edward the Elder, after the abolition of the ſeveral provincial cuſtoms and particular laws before mentioned.

But though this is the moſt likely foundation of this collection of maxims and cuſtoms; yet the maxims and cuſtoms, ſo collected, are of higher antiquity than memory or hiſtory can reach: nothing being more difficult than to aſcertain the preciſe beginning and firſt ſpring of an ancient and long-eſtabliſhed cuſtom. Whence it is, that in our law the goodneſs of a cuſtom depends upon its having been uſed time out of mind; or, in the ſolemnity of our legal phraſe, time whereof the memory of man runneth not to the contrary. This it is that gives it its weight and authority; and of this nature are the maxims and cuſtoms which compoſe the common law, or *lex non ſcripta*, of England.

This unwritten, or common law, is properly diſtinguiſhable into three kinds: 1. General cuſtoms; which are the univerſal rule of the whole kingdom, and form the common law in its ſtricter and more uſual ſignification. 2. Particular cuſtoms; which for the moſt part affect only the inhabitants of particular diſtricts. 3. Certain particular laws; which by cuſtom are adopted and uſed by ſome particular courts, of pretty general and extenſive juriſdiction.

39 Firſt branch of the unwritten law: General cuſtoms.

I. As to general cuſtoms, or the common law properly ſo called; this is that law, by which proceedings and determinations in the king's ordinary courts of juſtice are guided and directed. This, for the moſt part, ſettles the courſe in which lands deſcend by inheritance; the manner and form of acquiring and transferring property; the ſolemnities and obligation of contracts; the rules of expounding wills, deeds, and acts of parliament; the reſpective remedies of civil injuries; the ſeveral ſpecies of temporal offences, with the manner and degree of puniſhment, and an infinite number of minuter particulars, which diffuſe themſelves as extenſively as the ordinary diſtribution of common juſtice requires. Thus, for example, that there ſhall be four ſuperior courts of record, the chancery, the king's bench, the common pleas, and the exchequer;—that the eldeſt ſon alone is heir to his anceſtor;—that property may be acquired and transferred by writing;—that a deed is of no validity unleſs ſealed and delivered;—that wills ſhall be conſtrued more favourably, and deeds more ſtrictly;—that money lent upon bond is recoverable by action of debt;—that breaking the public peace is an offence and puniſhable by fine and impriſonment:—all theſe are doctrines that are not ſet down in any written ſtatute or ordinance; but depend merely upon immemorial uſage, that is, upon common law, for their ſupport.

Some have divided the common law into two principal grounds or foundations: 1. Eſtabliſhed cuſtoms; ſuch as that, where there are three brothers, the eldeſt brother ſhall be heir to the ſecond, in excluſion of the youngeſt, and, 2. Eſtabliſhed rules and maxims; as, "that the king can do no wrong, that no man ſhall be bound to accuſe himſelf," and the like. But theſe ſeem to be one and the ſame thing. For the authority of theſe maxims reſts entirely upon general reception and uſage; and the only method of proving that this or that maxim is a rule of the common law, is by ſhowing that it hath been always the cuſtom to obſerve it.

But here a very natural, and very material, queſtion ariſes: How are theſe cuſtoms or maxims to be known, and by whom is their validity to be determined? The anſwer is, By the judges in the ſeveral courts of juſtice. They are the depoſitory of the laws; the living oracles who muſt decide in all caſes of doubt, and who are bound by an oath to decide according to the law of the land. Their knowledge of that law is derived from experience and ſtudy; from the *viginti annorum lucubrationes*, which Forteſcue mentions; and from being long perſonally accuſtomed to the judicial deciſions of their predeceſſors. And indeed theſe judicial deciſions are the principal and moſt authoritative evidence, that can be given, of the exiſtence of ſuch a cuſtom as ſhall form a part of the common law. The judgment itſelf, and all the proceedings previous thereto, are carefully regiſtered and preſerved under the name of *records*, in public repoſitories ſet apart for that particular purpoſe; and to them frequent recourſe is had, when any critical queſtion ariſes, in the determination of which former precedents may give light or aſſiſtance. And therefore, even ſo early as the conqueſt, we find the *præteritorum memoria eventorum* reckoned up as one of the chief qualifications of thoſe who were held to be *legibus patriæ optime inſtituti*. For it is an eſtabliſhed rule, To abide by former precedents, where the ſame points come again in litigation: as well to keep the ſcale of juſtice even and ſteady, and not liable to waver with every new judge's opinion; as alſo becauſe the law in that caſe being ſolemnly declared and determined, what before was uncertain, and perhaps indifferent, is now become a permanent rule, which it is not in the breaſt of any ſubſequent judge to alter or vary from according to his private ſentiments: he being ſworn to determine, not according to his own private judgement, but according to the known laws and cuſtoms of the land; not delegated to pronounce a new law, but to maintain and expound the old one. Yet this rule admits of exception, where the former determination is moſt evidently contrary to reaſon; much more if it be contrary to the divine law. But, even in ſuch caſes, the ſubſequent judges do not pretend to make a new law, but to vindicate the old one from miſrepreſentation. For if it be found that the former deciſion is manifeſtly abſurd or unjuſt, it is declared, not that ſuch a ſentence was bad law, but that it was not law; that is, that it is not the eſtabliſhed cuſtom of the realm, as has been erroneouſly determined. And hence it is that our lawyers are with juſtice ſo copious in their encomiums on the reaſon of the common law; that they tell us, that the law is the perfection of reaſon, that it always intends to conform thereto, and that what is not reaſon is not law. Not that the particular reaſon of every rule in the law can at this diſtance of time be always preciſely aſſigned; but it is ſufficient that there be nothing in the rule flatly contradictory to reaſon, and then the law will preſume it to be well founded. And it hath been an ancient obſervation in the laws of England, that whenever a ſtanding rule of law, of which the reaſon perhaps could not be remembered or diſcerned, hath been wantonly broke in upon by ſtatutes or new reſolutions, the wiſdom of the rule hath in the end appeared from the inconveniences that have followed the innovation.

The doctrine of the law then is this: That precedents and rules muſt be followed, unleſs flatly abſurd or unjuſt: for though their reaſon be not obvious at firſt view, yet we owe ſuch a deference to former times, as not to ſuppoſe they acted wholly without conſideration. To illuſtrate this doctrine by examples. It has been determined, time out of mind, that a brother of the half blood ſhall never ſucceed as heir to the eſtate of his half brother, but it ſhall rather eſcheat to the king or other ſuperior lord. Now this is a poſitive law, fixed and eſtabliſhed by cuſtom; which cuſtom is evinced by judicial deciſions; and therefore can never be departed from by any modern judge without a breach of his oath and the law. For herein there is nothing repugnant to natural juſtice; though the artificial reaſon of it, drawn from the feodal law may not be quite obvious to every body. And therefore, on account of a ſuppoſed hardſhip upon the half brother, a modern judge might wiſh it had been otherwiſe ſettled; yet it is not in his power to alter it. But if any court were now to determine, that an elder brother of the half blood might enter upon and ſeize any lands that were purchaſed by his younger brother, no ſubſequent judges would ſcruple to declare that ſuch prior determination was unjuſt, was unreaſonable, and therefore was not law. So that the law, and the opinion of the judge, are not always convertible terms, or one and the ſame thing; ſince it ſometimes may happen that the judge may miſtake the law. Upon the whole, however, we may take it as a general rule, "That the deciſions of courts of juſtice are the evidence of what is common law;" in the ſame manner as in the civil law, what the emperor had once determined was to ſerve for a guide for the future.

The deciſions therefore of courts are held in the higheſt regard, and are not only preſerved as authentic records in the treaſuries of the ſeveral courts, but are handed out to public view in the numerous volumes of reports which furniſh the lawyer's library. Theſe reports are hiſtories of the ſeveral caſes, with a ſhort ſummary of the proceedings, which are preſerved at large in the record; the arguments on both ſides, and the reaſons the court gave for its judgment; taken down in ſhort notes by perſons preſent at the determination. And theſe ſerve as indexes to, and alſo to explain, the records; which always, in matters of conſequence and nicety, the judges direct to be ſearched. The reports are extant in a regular ſeries from the reign of King Edward II. incluſive; and from his time to that of Henry VIII. were taken by the prothonotaries, or chief ſcribes of the court, at the expence of the crown, and publiſhed annually, whence they are known under the denomination of the *year-books*. And it is much to be wiſhed that this beneficial cuſtom had, under proper regulations, been continued to this day; for though King James I. at the inſtance of lord Bacon, appointed two reporters, with a handſome ſtipend for this purpoſe; yet that wiſe inſtitution was ſoon neglected, and from the reign of Henry VIII. to the preſent time this taſk has been executed by many private and cotemporary hands; who ſometimes through haſte and inaccuracy, ſometimes through miſtake and want of ſkill, have publiſhed very crude and imperfect (perhaps contradictory) accounts of one and the ſame determination. Some of the moſt valuable of the ancient reports are thoſe publiſhed by lord chief juſtice Coke; a man of infinite learning in his profeſſion, though not a little infected with the pedantry and quaintneſs of the times he lived in, which appear ſtrongly in all his works. However, his writings are ſo highly eſtimated, that they are generally cited without the author's name (A).

Beſides theſe reporters, there are alſo other authors, to whom great veneration and reſpect are paid by the ſtudents of the common law. Such are Glanvil and Bracton, Britton and Fleta, Littleton and Fitzherbert, with ſome others of ancient date, whoſe treatiſes are cited as authority; and are evidence that caſes have formerly happened in which ſuch and ſuch points were determined, which are now become ſettled and firſt principles. One of the laſt of theſe methodical writers in point of time, whoſe works are of any intrinſic authority in the courts of juſtice, and do not entirely depend on the ſtrength of their quotations from older authors, is the ſame learned judge we have juſt mentioned, Sir Edwark Coke; who hath written four volumes of Inſtitutes, as he is pleaſed to call them, though they have little of the inſtitutional method to warrant ſuch a title. The firſt volume is a very extenſive comment upon a little excellent treatiſe of tenures, compiled by judge Littleton in the reign of Edward IV. This comment is a rich mine of valuable common-law learning, collected and heaped together from the ancient reports and year-books, but greatly defective in method (B). The ſecond volume is a comment upon many old acts of parliament, without any ſyſtematical order; the third a more methodical treatiſe of the pleas of the crown; and the fourth an account of the ſeveral ſpecies of courts (C).

And thus much for the firſt ground and chief corner-ſtone of the laws of England; which is general immemorial cuſtom, or common law, from time to time declared in the deciſions of the courts of juſtice; which deciſions are preſerved among the public records, explained in the reports, and digeſted for general uſe in the authoritive writings of the venerable ſages of the law.

The Roman law, as practiſed in the times of its liberty, paid alſo a great regard to cuſtom; but not ſo much as our law: it only then adopting it when the written law was deficient. Though the reaſons alleged in the digeſt will fully juſtify our practice in making it of equal authority with, when it is not contradicted by, the written law. "for ſince (ſays Julianus) the written law binds us for no other reaſon but becauſe it is approved by the judgment of the people, therefore thoſe laws which the people have approved without writing ought alſo to bind every body. For where is the difference, whether the people declare their aſſent to a law by ſuffrage, or by a uniform courſe of acting accordingly?" Thus did they reaſon while Rome had ſome remains of her freedom; but, when the imperial tyranny came to be fully eſtabliſhed, the civil laws ſpeak a very different language. *Quod principi placuit legis habet vigorem, cum populus ei et in eum omne ſuum imperium et poteſtatem conſerat*, ſays Ulpian. *Imperator ſolus et canditor et interpres legis exiſtimatur*, ſays the code. And again, *Sacrilegii inſtar eſt reſcripto principis obviari.* And indeed it is one of the characteriſtic marks of Britiſh liberty, that the common law depends

---

(A) His reports, for inſtance, are ſtyled κατ εξοχην, "the reports;" and in quoting them we uſually ſay, 1 or 2 Rep. not 1 or 2 Coke's Rep. as in citing other authors. The reports of judge Croke are alſo cited in a peculiar manner, by the name of thoſe princes in whoſe reigns the caſes reported in his three volumes were determined; viz. queen Elizabeth, king James, and king Charles I.; as well as by the number of each volume. For ſometimes we call them 1, 2, and 3, Cro.; but more commonly Cro. Eliz. Cro. Jac. and Cro. Car.

(B) It is uſually cited either by the name of Co. Litt. or as 1 Inſt.

(C) Theſe are cited as 2, 3, or 4 Inſt. without any author's name. An honorary diſtinction, which, we obſerved, is paid to the works of no other writer; the generality of reports and other tracts being quoted in the name of the compiler, as 2 Ventris, 4 Leonard, 1 Siderfin, and the like.

depends upon cuſtom; which carries this internal evidence of freedom along with it, that it probably was introduced by the voluntary conſent of the people.

40 Second branch of the unwritten laws: Particular cuſtoms.

II. The ſecond branch of the unwritten laws of England are particular cuſtoms, or laws which affect only the inhabitants of particular diſtricts.

Theſe particular cuſtoms, or ſome of them, are without doubt the remains of that multitude of local cuſtoms before-mentioned, out of which the common law, as it now ſtands, was collected at firſt by king Alfred, and afterwards by king Edgar and Edward the confeſſor: each diſtrict mutually ſacrificing ſome of its own ſpecial uſages, in order that the whole kingdom might enjoy the benefit of one uniform and univerſal ſyſtem of laws. But, for reaſons that have been now long forgotten, particular counties, cities, towns, manors, and lordſhips, were very early indulged with the privilege of abiding by their own cuſtoms, in contradiſtinction to the reſt of the nation at large: which privilege is confirmed to them by ſeveral acts of parliament.

Such is the cuſtom of gavelkind in Kent and ſome other parts of the kingdom (though perhaps it was alſo general till the Norman conqueſt); which ordains, among other things, that not the eldeſt ſon only of the father ſhall ſucceed to his inheritance, but all the ſons alike; and that, though the anceſtor be attainted and hanged, yet the heir ſhall ſucceed to his eſtate, without any eſcheat to the lord.—Such is the cuſtom that prevails in divers ancient boroughs, and therefore called *borough-engliſh*, that the youngeſt ſon ſhall inherit the eſtate, in preference to all his elder brothers.—Such is the cuſtom in other boroughs, that a widow ſhall be entitled, for her dower, to all her huſband's lands; whereas at the common law ſhe ſhall be endowed of one third part only.—Such alſo are the ſpecial and particular cuſtoms of manors, of which every one has more or leſs, and which bind all the copyhold tenants that hold of the ſaid manors.—Such likewiſe is the cuſtom of holding divers inferior courts, with power of trying cauſes, in cities and trading towns; the right of holding which, when no royal grant can be ſhown, depends entirely upon immemorial and eſtabliſhed uſage.—Such, laſtly, are many particular cuſtoms within the city of London, with regard to trade, apprentices, widows, orphans, and a variety of other matters. All theſe are contrary to the general law of the land, and are good only by ſpecial uſage; though the cuſtoms of London are alſo confirmed by act of parliament.

To this head may moſt properly be referred a particular ſyſtem of cuſtoms uſed only among one ſet of the king's ſubjects, called the *cuſtom of merchants*, or *lex mercatoria*: which, however different from the general rules of the common law, is yet ingrafted into it, and made a part of it; being allowed, for the benefit of trade, to be of the utmoſt validity in all commercial tranſactions; for it is a maxim of law, that *cuilibet in ſua arte credendum eſt*.

41 The rules relating to particular cuſtoms regard either the *proof* of their exiſtence; their *legality* when proved; or their uſual method of *allowance*. And firſt we will conſider the rules of *proof*.

As to gavelkind, and borough-engliſh, the law takes particular notice of them; and there is no occaſion to prove, that ſuch cuſtoms actually exiſt, but only that the lands in queſtion are ſubject thereto. All other private cuſtoms muſt be particularly pleaded: and as well the exiſtence of ſuch cuſtoms muſt be ſhown, as that the thing in diſpute is within the cuſtom alleged. The trial in both caſes (both to ſhow the exiſtence of the cuſtom, as, "that in the manor of Dale lands ſhall deſcend only to the heirs male, and never to the heirs female;" and alſo to ſhow "that the lands in queſtion are within that manor") is by a jury of 12 men, and not by the judges; except the ſame particular cuſtom has been before tried, determined, and recorded, in the ſame court.

The cuſtoms of London differ from all others in point of trial: for if the exiſtence of the cuſtom be brought in queſtion, it ſhall not be tried by a jury, but by certificate from the lord mayor and aldermen by the mouth of their recorder; unleſs it be ſuch a cuſtom as the corporation is itſelf intereſted in, as a right of taking toll, &c. for then the law permits them not to certify on their own behalf.

When a cuſtom is actually proved to exiſt, the next inquiry is into the legality of it; for if it is not a good cuſtom, it ought to be no longer uſed. *Malus uſus abolendus eſt*, is an eſtabliſhed maxim of the law. To make a particular cuſtom good, the following are neceſſary requiſites.

1. That it have been uſed ſo long, that the memory of man runneth not to the contrary. So that, if any one can ſhow the beginning of it, it is no good cuſtom. For which reaſon, no cuſtom can prevail againſt an expreſs act of parliament, ſince the ſtatute itſelf is a proof of a time when ſuch a cuſtom did not exiſt.

2. It muſt have been *continued*. Any interruption would cauſe a temporary ceaſing: the revival gives it a new beginning, which will be within time of memory, and thereupon the cuſtom will be void. But this muſt be underſtood with regard to an interruption of the right; for an interruption of the poſſeſſion only, for 10 or 20 years, will not deſtroy the cuſtom. As if the inhabitants of a pariſh have a cuſtomary right of watering their cattle at a certain pool, the cuſtom is not deſtroyed though they do not uſe it for 10 years, it only becomes more difficult to prove: but if the right be any how diſcontinued for a day, the cuſtom is quite at an end.

3. It muſt have been *peaceable*, and acquieſced in; not ſubject to contention and diſpute. For as cuſtoms owe their original to common conſent, their being immemorially diſputed, either at law or otherwiſe, is a proof that ſuch conſent was wanting.

4. Cuſtoms muſt be *reaſonable*; or rather, taken negatively, they muſt not be unreaſonable. Which is not always, as Sir Edward Coke ſays, to be underſtood of every unlearned man's reaſon; but of artificial and legal reaſon, warranted by authority of law. Upon which account a cuſtom may be good, though the particular reaſon of it cannot be aſſigned; for it ſufficeth, if no good legal reaſon can be aſſigned againſt it. Thus a cuſtom in a pariſh, that no man ſhall put his beaſts into the common till the third of October, would be good; and yet it would be hard to ſhow the reaſon why that day in particular is fixed upon, rather than the day before or after. But a cuſtom, that no cattle

ſhall be put in till the lord of the manor has firſt put in his, is unreaſonable, and therefore bad: for peradventure the lord will never put in his; and then the tenants will loſe all their profits.

5. Cuſtoms ought to be *certain*. A cuſtom, that lands ſhall deſcend to the moſt worthy of the owner's blood, is void; for how ſhall this worth be determined? but a cuſtom to deſcend to the next male of the blood excluſive of females, is certain, and therefore good. A cuſtom to pay two pence an acre in lieu of tithes, is good; but to pay ſometimes two pence and ſometimes three pence, as the occupier of the land pleaſes, is bad for its certainty. Yet a cuſtom, to pay a year's improved value for a fine on a copyhold eſtate, is good; though the value is a thing uncertain: for the value may at any time be aſcertained; and the maxim of law is, *Id certum eſt, quod certum reddi poteſt.*

6. Cuſtoms, though eſtabliſhed by conſent, muſt be (when eſtabliſhed) *compulſory*: and not left to the option of every man, whether he will uſe them or no. Therefore a cuſtom, that all the inhabitants ſhall be rated toward the maintenance of a bridge, will be good; but a cuſtom, that every man is to contribute thereto at his own pleaſure, is idle and abſurd, and indeed no cuſtom at all.

7. Laſtly, cuſtoms muſt be *conſiſtent* with each other. One cuſtom cannot be ſet up in oppoſition to another. For if both are really cuſtoms, then both are of equal antiquity, and both eſtabliſhed by mutual conſent: which to ſay of contradictory cuſtoms, is abſurd. Therefore, if one man preſcribes that by cuſtom he has a right to have windows looking into another's garden; the other cannot claim a right by cuſtom to ſtop up or obſtruct thoſe windows: for theſe two contradictory cuſtoms cannot both be good, nor both ſtand together. He ought rather to deny the exiſtence of the former cuſtom.

Next, as to the *allowance* of ſpecial cuſtoms. Cuſtoms, in derogation of the common law, muſt be conſtrued ſtrictly. Thus, by the cuſtom of gavelkind, an infant of 15 years may by one ſpecies of conveyance (called *a deed of feoffment*) convey away his lands in fee ſimple, or for ever. Yet this cuſtom does not impower him to uſe any other conveyance, or even to leaſe them for ſeven years: for the cuſtom muſt be ſtrictly purſued. And, moreover, all ſpecial cuſtoms muſt ſubmit to the king's prerogative. Therefore, if the king purchaſes lands of the nature of gavelkind, where all the ſons inherit equally; yet, upon the king's demiſe, his eldeſt ſon ſhall ſucceed to thoſe lands alone. And thus much for the ſecond part of the *leges non ſcriptæ*, or thoſe particular cuſtoms which affect particular perſons or diſtricts only.

42
Third branch of the unwritten law.

III. The third branch of them are thoſe peculiar laws which by cuſtom are adopted and uſed only in certain peculiar courts and juriſdictions. And by theſe are underſtood the civil and canon laws.

It may ſeem a little improper, at firſt view, to rank theſe laws, under the head of *leges non ſcriptæ*, or unwritten laws, ſeeing they are ſet forth by authority in their pandects, their codes, and their inſtitutions; their councils, decrees, and decretals; and enforced by an immenſe number of expoſitions, deciſions, and treatiſes of the learned in both branches of the law. But this is done after the example of Sir Matthew Hale, becauſe it is moſt plain, that it is not on account of their being written laws, that either the canon law, or the civil law, have any obligation within this kingdom: neither do their force and efficacy depend upon their own intrinſic authority; which is the caſe of our written laws or acts of parliament. They bind not the ſubjects of England, becauſe their materials were collected from popes or emperors; were digeſted by Juſtinian, or declared to be authentic by Gregory. Theſe conſiderations give them no authority here: for the legiſlature of England doth not, nor ever did, recognize any foreign power, as ſuperior or equal to it in this kingdom; or as having the right to give law to any the meaneſt of its ſubjects. But all the ſtrength that either the papal or imperial laws have obtained in this realm (or indeed in any other kingdom in Europe) is only becauſe they have been admitted and received by immemorial uſage and cuſtom in ſome particular caſes, and ſome particular courts; and then they form a branch of the *leges non ſcriptæ*, or cuſtomary law: or elſe, becauſe they are in ſome other caſes introduced by conſent of parliament, and then they owe their validity to the *leges ſcriptæ*, or ſtatute law. This is expreſsly declared in thoſe remarkable words of the ſtatute 25 Hen. VIII. c. 21. addreſſed to the king's royal majeſty.—"This your grace's realm, recognizing no ſuperior under God but only your grace, hath been and is free from ſubjection to any man's laws, but only to ſuch as have been deviſed, made, and ordained within this realm for the wealth of the ſame; or to ſuch other as, by ſufferance of your grace and your progenitors, the people of this your realm have taken at their free liberty, by their own conſent, to be uſed among them; and have bound themſelves by long uſe and cuſtom to the obſervance of the ſame: not as to the obſervance of the laws of any foreign prince, potentate, or prelate; but as to the cuſtomed and ancient laws of this realm, originally eſtabliſhed as laws of the ſame, by the ſaid ſufferance, conſents, and cuſtoms; and none otherwiſe."

43
Civil law.

1. By the civil law, abſolutely taken, is generally underſtood the civil or municipal law of the Roman empire, as compriſed in the inſtitutes, the code, and the digeſt of the emperor Juſtinian, and the novel conſtitutions of himſelf and ſome of his ſucceſſors; of which it may not be amiſs to give a ſhort and general account.

The Roman law (founded firſt upon the regal conſtitutions of their ancient kings, next upon the 12 tables of the decemviri, then upon the laws or ſtatutes enacted by the ſenate or people, the edicts of the prætor, and the *reſponſa prudentum* or opinions of learned lawyers, and laſtly upon the imperial decrees or conſtitutions of ſucceſſive emperors) had grown to ſo great a bulk, or, as Livy expreſſes it, *tam immenſus aliarum ſuper alias acervatarum legum cumulus*, that they were computed to be many camels load by an author who preceded Juſtinian. This was in part remedied by the collections of three private lawyers, Gregorius, Hermogenes, and Papirius; and then by the emperor Theodoſius the younger, by whoſe orders a code was compiled, A. D. 438, being a methodical collection of all the imperial conſtitutions then in force: which Theodoſian code was the only book of civil law received as authentic in the weſtern part of Europe, till many centuries after; and to this it is probable that the Franks and Goths might frequently pay ſome regard, in framing legal conſtitutions for their newly erected kingdoms. For Juſtinian commanded only in the eaſtern remains of the empire; and it was under his auſpices, that the preſent body of civil law was compiled and finiſhed by Tribonian and other lawyers, about the year 533.

44 This conſiſts of, 1. The inſtitutes; which contain the elements or firſt principles of the Roman law, in four books. 2. The digeſts or pandects, in 50 books; containing the opinions and writings of eminent lawyers, digeſted in a ſyſtematical method. 3. A new code, or collection of imperial conſtitutions; the lapſe of a whole century having rendered the former code of Theodoſius imperfect. 4. The novels, or new conſtitutions, poſterior in time to the other books, and amounting to a ſupplement to the code; containing new decrees of ſucceſſive emperors, as new queſtions happened to ariſe. Theſe form the body of Roman law, or *corpus juris civilis*, as publiſhed about the time of Juſtinian: which, however, fell ſoon into neglect and oblivion, till about the year 1130, when a copy of the digeſts was found at Amalfi in Italy; which accident, concurring with the policy of the Roman eccleſiaſtics, ſuddenly gave new vogue and authority to the civil law, introduced it into ſeveral nations, and occaſioned that mighty inundation of voluminous comments, with which this ſyſtem of law, more than any other, is now loaded.

45
Canon law. 2. The canon law is a body of Roman eccleſiaſtical law, relative to ſuch matters as that church either has, or pretends to have, the proper juriſdiction over. This is compiled from the opinions of the ancient Latin fathers, the decrees of general councils, the decretal epiſtles and bulls of the holy ſee. All which lay in the ſame diſorder and confuſion as the Roman civil law: till, about the year 1151, one Gratian and Italian monk, animated by the diſcovery of Juſtinian's pandects, reduced the eccleſiaſtical conſtitutions alſo into ſome method, in three books; which he entitled *Concordia diſcordantium canonum*, but which are generally known by the name of *Decretum Gratiani*. Theſe reached as low as the time of Pope Alexander III. The ſubſequent papal decrees, to the pontificate of Gregory IX. were publiſhed in much the ſame method under the auſpices of that pope, about the year 1230, in five books; entitled *Decretalia Gregorii noni*. A ſixth book was added by Boniface VIII. About the year 1298, which is called *Sextus Decretalium*. The Clementine conſtitutions, or decrees of Clement V. were in like manner authenticated in 1317 by his ſucceſſor John XXII.; who alſo publiſhed 20 conſtitutions of his own, called *Extravagantes Joannis*: all which in ſome meaſure anſwer to the novels of the civil law. To theſe have been ſince added ſome decrees of later popes in five books, called *Extravagantes Communes*: And all theſe together, Gratian's decree, Gregory's decretals, the ſixth decretal, the Clementine conſtitutions, and the Extravagants of John and his ſucceſſors, form the *corpus juris canonici*, or body of the Roman canon law.

Beſides theſe pontifical collections, which during the times of popery were received as authentic in England, as well as in other parts of Chriſtendom, there is alſo a kind of national canon law, compoſed of legatine and provincial conſtitutions, and adapted only to the exigencies of this church and kingdom. The legatine conſtitutions were eccleſiaſtical laws, enacted in national ſynods, held under the cardinals Otho and Othobon, legates from Pope Gregory IX. and Pope Clement IV. in the reign of King Henry III. about the years 1220 and 1268. The provincial conſtitutions are principally the decrees of provincial ſynods, held under divers archbiſhops of Canterbury, from Stephen Langton in the reign of Henry III. to Henry Chichele in the reign of Henry V.; and adopted alſo by the province of York in the reign of Henry VI. At the dawn of the reformation, in the reign of King Henry VIII. it was enacted in parliament, that a review ſhould be had of the canon law; and till ſuch review ſhould be made, all canons, conſtitutions, ordinances and ſynodals provincial, being then already made, and not repugnant to the law of the land or the king's prerogative, ſhould ſtill be uſed and executed. And, as no ſuch review has yet been perfected, upon this ſtatute now depends the authority of the canon law in England.

As for the canons enacted by the clergy under James I. in the year 1603, and never confirmed in parliament, it has been ſolemly adjudged upon the principles of law and the conſtitution, that where they are not merely declaratory of the ancient canon law, but are introductory of new regulations, they do not bind the laity, whatever regard the clergy may think proper to pay them.

46 There are four ſpecies of courts, in which the civil and canon laws are permitted under different reſtrictions to be uſed. 1. The courts of the archbiſhops and biſhops, and their derivative officers; uſually called *courts Chriſtian, (curiæ Chriſtianitatis)*, or the *eccleſiaſtical courts*. 2. The military courts. 3. The courts of admiralty. 4. The courts of the two univerſities. In all, their reception in general, and the different degrees of that reception, are grounded entirely upon cuſtom; corroborated in the latter inſtance by act of parliament, ratifying thoſe charters which confirm the cuſtomary law of the univerſities. The more minute conſideration of them will fall under their proper articles. It will ſuffice at preſent to remark a few particulars relative to them all, which may ſerve to inculcate more ſtrongly the doctrine laid down concerning them.

1. And firſt, the courts of common law have the ſuperintendency over theſe courts; to keep them within their juriſdictions; to determine wherein they exceed them; to reſtrain and prohibit ſuch exceſs; and (in caſe of contumacy) to puniſh the officer who executes, and in ſome caſes the judge who enforces, the ſentence ſo declared to be illegal.

2. The common law has reſerved to itſelf the expoſition of all ſuch acts of parliament, as concern either the extent of theſe courts, or the matters depending before them. And therefore, if theſe courts either refuſe to allow theſe acts of parliament, or will expound them in any other ſenſe than what the common law puts upon them, the king's courts at Weſtminſter will grant prohibitions to reſtrain and controul them.

3. An appeal lies from all theſe courts to the king, in the laſt reſort; which proves that the juriſdiction

exerciſed in them is derived from the crown of England, and not from any foreign potentate, or intrinſic authority of their own.—And, from theſe three ſtrong marks and enſigns of ſuperiority, it appears beyond a doubt, that the civil and canon laws, though admitted in ſome caſes by cuſtom in ſome courts, are only ſubordinate and *leges ſub graviori lege;* and that thus admitted, reſtrained, altered, new-modelled, and amended, they are by no means with us a diſtinct independent ſpecies of law, but are inferior branches of the cuſtomary or unwritten laws of England, properly called the *kings eccleſiaſtical, the king's military, the king's maritime, or the king's academical, laws.*

47 The written laws.

Let us next proceed to the *leges ſcriptæ*, the written laws of the kingdom; which are ſtatutes, acts, or edicts, made by the king's majeſty, by and with the advice of the lords ſpiritual and temporal and commons in parliament aſſembled. The oldeſt of theſe now extant, and printed in our ſtatute books, is the famous *magna charta*, as confirmed in parliament 9 Hen. III. though doubtleſs there were many acts before that time, the records of which are now loſt, and the determinations of them perhaps at preſent currently received for the maxims of the old common law.

The manner of making theſe ſtatutes being explained under the article Bill and Parliament, we ſhall here only take notice of the different kinds of ſtatutes; and of ſome general rules with regard to their conſtruction (d).

48 Kinds of ſtatutes.

Firſt, as to their ſeveral kinds. Statutes are either *general* or *ſpecial*, public or private. A general or public act is an univerſal rule that regards the whole community: and of this the courts of law are bound to take notice judicially and *ex officio*, without the ſtatute being particularly pleaded, or formally ſet forth, by the party who claims an advantage under it. Special or private acts are rather exceptions than rules, being thoſe which only operate upon particular perſons and private concerns; ſuch as the Romans entitled *ſenatus decreta*, in contradiſtinction to the *ſenatus-conſulta*, which regarded the whole community; and of theſe the judges are not bound to take notice, unleſs they be formally ſhewn and pleaded. Thus, to ſhew the diſtinction, the ſtatute 13 Eliz. c. 10. to prevent ſpiritual perſons from making leaſes for longer terms than 21 years or three lives, is a public act; it being a rule preſcribed to the whole body of ſpiritual perſons in the nation: but an act to enable the biſhop of Cheſter to make a leaſe to A. B. for 60 years, is an exception to this rule; it concerns only the parties and the biſhop's ſucceſſors, and is therefore a private act.

Statutes alſo are either *declaratory* of the common law, or *remedial* of ſome defects therein. Declaratory, where the old cuſtoms of the kingdom is almoſt fallen into diſuſe, or become diſputable; in which caſe the parliament has thought proper, *in perpetuum rei teſtimonium*, and for avoiding all doubts and difficulties, to declare what the common law is and ever hath been. Thus the ſtatute of treaſons, 25 Edw. III. cap. 2. doth not make any new ſpecies of treaſons: but only, for the benefit of the ſubject, declares and enumerates thoſe ſeveral kinds of offence which before were treaſon at the common law. Remedial ſtatutes are thoſe which are made to ſupply ſuch defects, and abridge ſuch ſuperfluities, in the common law, as ariſe either from the general imperfection of all human laws, from change of time and circumſtances, from the miſtakes and unadviſed determinations of unlearned judges, or from any other cauſe whatſoever. And this being done, either by enlarging the common law where it was too narrow and circumſcribed, or by reſtraining it where it was too lax and luxuriant, hath occaſioned another ſubordinate diviſion of remedial acts of parliament into *enlarging* and *reſtraining* ſtatutes. To inſtance again in the caſe of treaſon. Clipping the current coin of the kingdom was an offence not ſufficiently guarded againſt by the common law: therefore it was thought expedient by ſtatute 5 Eliz. c. 11. to make it high treaſon, which it was not at the common law: ſo that this was an *enlarging* ſtatute. At common law, alſo, ſpiritual corporations might leaſe out their eſtates for any term of years, till prevented by the ſtatute 13 Eliz. before-mentioned: this was therefore a *reſtraining* ſtatute.

49 Conſtruction of ſtatutes.

Secondly, the rules to be obſerved with regard to the conſtruction of ſtatutes are principally theſe which follow.

1. There are three points to be conſidered in the conſtruction of all remedial ſtatutes; the old law, the miſchief, and the remedy: that is, how the common law ſtood at the making of the act; what the miſchief was, for which the common law did not provide; and what

---

(d) The method of citing theſe acts of parliament is various. Many of the ancient ſtatutes are called after the name of the place where the parliament was held that made them; as the ſtatutes of Merton and Marleberge, of Weſtminſter, Gloceſter, and Wincheſter. Others are denominated entirely from their ſubject; as the ſtatutes of Wales and Ireland, the *articuli cleri*, and the *prerogativa regis*. Some are diſtinguiſhed by their initial words, a method of citing very ancient: being uſed by the Jews, in denominating the books of the pentateuch; by the Chriſtian church, in diſtinguiſhing their hymns and divine offices; by the Romaniſts, in deſcribing their papal bulls; and in ſhort by the whole body of ancient civilians and canoniſts, among whom this method of citation generally prevailed, not only with regard to chapters, but inferior ſections alſo; in imitation of all which we ſtill call ſome of the old ſtatutes by their initial words, as the ſtatute of *Quia emptores*, and that of *Circumſpecte agatis*. But the moſt uſual method of citing them, eſpecially ſince the time of Edward II. is by naming the year of the king's reign in which the ſtatute was made, together with the chapter or particular act, according to its numeral order; as, 9 Geo. II. c. 4. For all the acts of one ſeſſion of parliament taken together make properly but one ſtatute: and therefore, when two ſeſſions have been held in one year, we uſually mention ſtat. 1. or 2. Thus the bill of rights is cited, as 1 W. & M. ſt. 2 c. 2. ſignifying that it is the ſecond chapter or act of the ſecond ſtatute or the laws made in the ſecond ſeſſions of parliament held in the firſt year of king William and queen Mary.

what remedy the parliament hath provided to cure this miſchief. And it is the buſineſs of the judges ſo to conſtrue the act, as to ſuppreſs the miſchief and advance the remedy. Let us inſtance again in the ſame reſtraining ſtatute of 13 Eliz. c. 10. By the common law, eccleſiaſtical corporations might let as long leaſes as they thought proper: the miſchief was, that they let long and unreaſonable leaſes, to the impoveriſhment of their ſucceſſors: the remedy applied by the ſtatute was by making void all leaſes by eccleſiaſtical bodies for longer terms than three lives or 21 years. Now in the conſtruction of this ſtatute it is held, that leaſes, though for a longer term, if made by a biſhop, are not void during the biſhop's continuance in his ſee; or, if made by a dean and chapter, they are not void during the continuance of the dean; for the act was made for the benefit and protection of the ſucceſſor. The miſchief is therefore ſufficiently ſuppreſſed by vacating them after the determination of the intereſt of the granters; but the leaſes, during their continuance, being not within the miſchief, are not within the remedy.

2. A ſtatute, which treats of things or perſons of an inferior rank, cannot by any *general words* be extended to thoſe of a ſuperior. So a ſtatute, treating of "deans, prebendaries, parſons, vicars, *and others having ſpiritual promotion*," is held not to extend to biſhops, though they have ſpiritual promotion; deans being the higheſt perſons named, and biſhops being of a ſtill higher order.

3. Penal ſtatutes muſt be conſtrued ſtrictly. Thus the ſtatute 1 Edw. VI. c. 12. having enacted that thoſe who are convicted of ſtealing *horſes* ſhould not have the benefit of clergy, the judges conceived that this did not extend to him who ſhould ſteal but one *horſe*, and therefore procured a new act for that purpoſe in the following year. And, to come nearer to our own times, by the ſtatute 14 Geo. II. c. 6. ſtealing ſheep *or other cattle*, was made felony without benefit of clergy. But theſe general words, "or other cattle," being looked upon as much too looſe to create a capital offence, the act was held to extend to nothing but mere ſheep. And therefore, in the next ſeſſions, it was found neceſſary to make another ſtatute, 15 Geo. II. c. 34. extending the former to bulls, cows, oxen, ſteers, bullocks, heifers, calves, and lambs, by name.

4. Statutes againſt frauds are to be liberally and beneficially expounded. This may ſeem a contradiction to the laſt rule; moſt ſtatutes againſt frauds being in their conſequences penal. But this difference is here to be taken: where the ſtatute acts upon the offender, and inflicts a penalty, as the pillory or a fine, it is then to be taken ſtrictly; but when the ſtatute acts upon the offence, by ſetting aſide the fraudulent tranſaction, here it is to be conſtrued liberally. Upon this footing the ſtatute of 13 Eliz. c. 5. which voids all gifts of goods, &c. made to defraud creditors *and others*, was held to extend by the general words to a gift made to defraud the queen of a forfeiture.

5. One part of a ſtatute muſt be ſo conſtrued by another, that the whole may (if poſſible) ſtand: *ut res magis valeat quam pereat*. As if land be veſted in the king and his heirs by act of parliament, ſaving the right of A; and A has at that time a leaſe of it for three years; here A ſhall hold it for his term of three years, and afterwards it ſhall go to the king. For this interpretation furniſhes matter for every clauſe of the ſtatute to work and operate upon. But,

6. A ſaving, totally repugnant to the body of the act, is void. If therefore an act of parliament veſts land in the king and his heirs, ſaving the right of all perſons whatſoever; or veſts the land of A in the king, ſaving the right of A: in either of theſe caſes the ſaving is totally repugnant to the body of the ſtatute, and (if good) would render the ſtatute of no effect or operation; and therefore the ſaving is void, and the land veſts abſolutely in the king.

7. Where the common law and a ſtatute differ, the common law gives place to the ſtatute; and an old ſtatute gives place to a new one. And this upon the general principle laid down in the laſt ſection, that *leges poſteriores priores contrarias abrogant*. But this is to be underſtood only when the latter ſtatute is couched in negative terms, or by its matter neceſſarily implies a negative. As if a former act ſays, that a juror upon ſuch a trial ſhall have twenty pounds a-year, and a new ſtatute comes and ſays he ſhall have twenty merks; here the latter ſtatute, though it does not expreſs, yet neceſſarily implies, a negative, and virtually repeals the former. For if twenty merks be made qualification ſufficient, the former ſtatute which requires twenty pounds is at an end. But if both the acts be merely affirmative, and the ſubſtance ſuch that both may ſtand together, here the latter does not repeal the former, but they ſhall both have a concurrent efficacy. If by a former law an offence be indictable at the quarter-ſeſſions, and a latter law makes the ſame offence indictable at the aſſizes; here the juriſdiction of the ſeſſions is not taken away, but both have a concurrent juriſdiction, and the offender may be proſecuted at either: unleſs the new ſtatute ſubjoins expreſs negative words; as, that the offence ſhall be indictable at the aſſizes, *and not elſewhere*.

8. If a ſtatute, that repeals another, is itſelf repealed afterwards, the firſt ſtature is hereby revived, without any formal words for that purpoſe. So when the ſtatutes of 26 and 35 Hen. VIII. declaring the king to be the ſupreme head of the church, were repealed by a ſtatute 1 and 2 Philip and Mary, and this latter ſtatute was afterwards repealed by an act of 1 Eliz. there needed not any expreſs words of revival in queen Elizabeth's ſtatute, but theſe acts of king Henry were impliedly and virtually revived.

9. Acts of parliament derogatory from the power of ſubſequent parliaments bind not. So the ſtatute 11 Hen. VII. c. 1. which directs, that no perſon for aſſiſting a king *de facto* ſhall be attainted of treaſon by act of parliament or otherwiſe, is held to be good only as to common proſecutions for high treaſon; but will not reſtrain or clog any parliamentary attainder. Becauſe the legiſlature, being in truth the ſovereign power, is always of equal, always of abſolute authority: it acknowledges no ſuperior upon earth, which the prior legiſlature muſt have been if its ordinances could bind the preſent parliament. And upon the ſame principle Cicero, in his letters to Atticus, treats with a proper contempt theſe reſtraining clauſes, which endeavour to tie up the hands of ſucceeding legiſlatures.

giſlatures. "When you repeal the law itſelf (ſays he), you at the ſame time repeal the prohibitory clauſe which guards againſt ſuch repeal."

10. Laſtly, acts of parliament that are impoſſible to be performed are of no validity: and if there ariſe out of them collaterally any abſurd conſequences, manifeſtly contradictory to common reaſon, they are with regard to thoſe collateral conſequences void. We lay down the rule with theſe reſtrictions: though we know it is generally laid down more largely, that acts of parliament contrary to reaſon are void. But if the parliament will poſitively enact a thing to be done which is unreaſonable, we know of no power that can control it: and the examples uſually alleged in ſupport of this ſenſe of the rule do none of them prove, that where the main object of a ſtatute is unreaſonable, the judges are at liberty to reject it: for that were to ſet the judicial power above that of the legiſlature, which would be ſubverſive of all government. But where ſome collateral matter ariſes out of the general words, and happens to be unreaſonable; there the judges are in decency to conclude that this conſequence was not foreſeen by the parliament, and therefore they are at liberty to expound the ſtatute by equity, and only *quoad hoc* diſregard it. Thus if an act of parliament gives a man power to try all cauſes that ariſe within his manor of Dale; yet, if a cauſe ſhould ariſe in which he himſelf is a party, the act is conſtrued not to extend to that, becauſe it is unreaſonable that any man ſhould determine his own quarrel. But, if we could conceive it poſſible for the parliament to enact, that he ſhould try as well his own cauſes as thoſe of other perſons, there is no court that has power to defeat the intent of the legiſlature, when couched in ſuch evident and expreſs words as leave no doubt whether it was the intent of the legiſlature or not.

Theſe are the ſeveral grounds of the laws of England: over and above which, equity is alſo frequently called in to aſſiſt, to moderate, and to explain them. What equity is, and how impoſſible in its very eſſence to be reduced to ſtated rules, hath been ſhewn above. It may be ſufficient, therefore, to add in this place, that, beſides the liberality of ſentiment with which the common-law judges interpret acts of parliament, and ſuch rules of the unwritten law as are not of a poſitive kind, there are alſo courts of equity eſtabliſhed for the benefit of the ſubject, to detect latent frauds and concealments, which the proceſs of the courts of law is not adapted to reach; to enforce the execution of ſuch matters of truſt and confidence, as are binding in conſcience, though not cognizable in a court of law; to deliver from ſuch dangers as are owing to misfortune or overſight; and to give a more ſpecific relief, and more adapted to the circumſtances of the caſe, than can always be obtained by the generality of the rules of the poſitive or common law. This is the buſineſs of the courts of equity, which however are only converſant in matters of property. For the freedom of the conſtitution will not permit, that in criminal caſes a power ſhould be lodged in any judge to conſtrue the law otherwiſe than according to the letter. This caution, while it admirably protects the public liberty, can never bear hard upon individuals. A man cannot ſuffer *more* puniſhment than the law aſſigns, but he may ſuffer *leſs*. The laws cannot be ſtrained by partiality to inflict a penalty beyond what the letter will warrant; but, in caſes where the letter induces any apparent hardſhip, the crown has the power to pardon.

The objects of the laws of England are, 1. The rights of perſons. 2. The rights of things. 3. Private wrongs. 4. Public wrongs.

CHAP. I.

Of the RIGHTS *of* PERSONS.

SECT. I. *Of the abſolute rights of individuals.* [xiv.]

(1.) THE objects of the *Laws* of England are, 1. *Rights*, 2. *Wrongs*.

(2.) *Rights* are the rights of *perſons*, or the rights of *things*.

(3.) The rights of *perſons* are ſuch as concern, and are annexed to, the perſons of men: and, when the perſon *to* whom they are due is regarded, they are called (ſimply) *rights*; but, when we conſider the perſon *from* whom they are due, they are then denominated *duties*.

(4.) *Perſons* are either *natural*, that is, ſuch as they are formed by nature; or *artificial*, that is, created by human policy, as bodies politic or *corporations*.

(5.) The rights of *natural* perſons are, 1. *Abſolute*, or ſuch as belong to individuals. 2. *Relative*, or ſuch as regard members of ſociety.

(6.) The *abſolute rights of individuals*, regarded by the municipal laws (which pay no attention to *duties*, of the abſolute kind), compoſe what is called political or civil *liberty*.

(7. Political or civil *liberty* is the natural liberty of mankind, ſo far reſtrained by human laws as is neceſſary for the good of ſociety.

(8.) The abſolute rights or civil liberties of Engliſhmen, as frequently declared in parliament, are principally three; the right of *perſonal ſecurity*, of *perſonal liberty*, and of *private property*.

(9.) The right of *perſonal ſeccurity* conſiſts in the legal enjoyment of life, limb, body, health, and reputation.

(10.) The right of *perſonal liberty* conſiſts in the free power of loco-motion, without illegal reſtraint or baniſhment.

(11.) The right of *private property* conſiſts in every man's free uſe and diſpoſal of his own lawful acquiſitions, without injury or illegal diminution.

(12.) Beſides theſe three *primary* rights, there are others which are *ſecondary* and ſubordinate; *viz.* (to preſerve the former from unlawful attacks) 1. The conſtitution and power of parliaments; 2. The limitation of the king's prerogative;—And (to vindicate them when actually violated) 3. The regular adminiſtration of public juſtice; 4. The right of petitioning for redreſs of grievances; 5. The right of having and uſing arms for ſelf defence.

SECT. II. *Of the parliament.* [xiv.]

(1.) THE *relations* of perſons are, 1. *Public*. 2. *Private*. The *public* relations are thoſe of *magiſtrates* and *people. Magiſtrates* are *ſuperior* or *ſubordinate.* And of *ſupreme* magiſtrates, in England, the *parliament* is the ſupreme *legiſlative*, the *king* the ſupreme *executive.*

(2.) *Parliaments*, in ſome ſhape, are of as high antiquity in England as the Saxon government; and have ſubſiſted in their preſent form, at leaſt five hundred years

(3.) The parliament is aſſembled by the king's writs, and its ſitting muſt not be intermitted above three years.

(4.) Its conſtituent parts are the king's majeſty, the lords ſpiritual and temporal, and the commons repreſented by their members: each of which parts has a negative, or neceſſary, voice in making laws.

(5.) With regard to the *general* law of parliament; its power is abſolute: each houſe is the judge of its own privileges; and all the members of either houſe are intitled to the privilege of ſpeech, of perſon, of their domeſtics, and of their lands and goods.

(6.) The *peculiar* privileges of the lords (beſides their judicial capacity), are to hunt in the king's foreſts; to be attended by the ſages of the law; to make proxies; to enter proteſts; and to regulate the election of the 16 peers of North-Britain.

(7.) The *peculiar* privileges of the commons are to frame taxes for the ſubject; and to determine the merits of their own elections, with regard to the qualifications of the electors and elected, and the proceedings at elections themſelves.

(8.) Bills are uſually twice read in each houſe, committed, engroſſed, and then read a third time; and when they have obtained the concurrence of both houſes, and received the royal aſſent, they become *acts* of parliament.

(9.) The houſes may adjourn themſelves; but the king only can prorogue the parliament.

(10.) Parliaments are diſſolved, 1. At the king's will. 2. By the demiſe of the crown, that is, within ſix months after. 3. By length of time, or having ſat for the ſpace of ſeven years.

[xlvi.] SECT. III. *Of the king and his title.*

(1.) THE ſupreme *executive* power of England is lodged in a ſingle perſon; the king or queen.

(2.) This royal perſon may be conſidered with regard to, 1. His title. 2. His royal family. 3. His councils. 4. His duties. 5. His prerogative. 6. His revenue.

(3.) With regard to his *title;* the crown of England, by the poſitive conſtitution of the kingdom, hath ever been deſcendible, and ſo continues.

(4.) The crown is deſcendible in a courſe peculiar to itſelf.

(5.) This courſe of deſcent is ſubject to limitation by parliament.

(6.) Notwithſtanding ſuch limitations, the crown retains its deſcendible quality, and becomes hereditary in the prince to whom it is limited.

(7.) King Egbert, King Canute, and King William I. have been ſucceſſively conſtituted the common ſtocks, or anceſtors, of this deſcent.

(8.) At the revolution, the convention of eſtates, or repreſentative body of the nation, declared, that the miſconduct of King James II. amounted to an abdication of the government, and that the throne was thereby *vacant.*

(9.) In conſequence of this vacancy, and from a regard to the ancient line, the convention appointed the next Proteſtant heirs of the blood royal of King Charles I. to fill the vacant throne, in the old order of ſucceſſion; with a temporary exception, or preference, to the perſon of King William III.

(10.) On the impending failure of the proteſtant line of King Charles I. (whereby the throne might again have become vacant) the king and parliament extended the ſettlement of the crown to the Proteſtant line of King James I. viz. to the Princeſs Sophia of Hanover, and the heirs of her body, being Proteſtants: And ſhe is now the common ſtock, from whom the heir of the crown muſt deſcend.

SECT. IV. *Of the king's royal family.* [xlvii.]

(1.) THE king's royal *family* conſiſts, firſt, of the *queen:* who is regnant, conſort, or dowager.

(2.) The queen *conſort* is a public perſon, and hath many perſonal prerogatives and diſtinct revenues.

(3.) The Prince and Princeſs of Wales, and the Princeſs-royal, are peculiarly regarded by the law.

(4.) The other princes of the blood-royal are only intitled to precedence.

SECT V. *Of the councils belonging to the king.* [xlviii.]

(1.) THE *king's councils* are, 1. The *parliament.* 2. The great council of *peers.* 3. The *judges,* for matters of law. 4. The *privy* council.

(2.) In *privy-counſellors* may be conſidered, 1. Their creation. 2. Their qualifications. 3. Their duties. 4. Their powers. 5. Their privileges. 6. Their diſſolution.

SECT. VI. *Of the king's duties.* [xlix.]

(1.) THE *king's duties* are to govern his people according to law, to execute judgment in mercy, and to maintain the eſtabliſhed religion. Theſe are his part of the original contract between himſelf and the people; founded in the nature of ſociety, and expreſſed in his oath at the coronation.

SECT. VII. *Of the king's prerogative.* l.

(1.) PREROGATIVE is that ſpecial power and preeminence which the king hath above other perſons, and out of the ordinary courſe of law, in right of his regal dignity.

(2.) Such *prerogatives* are either *direct*, or *incidental.* The *incidental*, ariſing out of other matters, are conſidered as they ariſe: We now treat only of the *direct.*

(3.) The *direct* prerogatives regard, 1. The *king's dignity*, or royal character; 2. His *authority*, or regal power; 3. His *revenue*, or royal income.

(4.) The *king's dignity* conſiſts in the legal attributes of, 1. Perſonal ſovereignty. 2. Abſolute perfection. 3. Political perpetuity.

(5.) In the *king's authority*, or regal power, conſiſts the executive part of government.

(6.) In *foreign* concerns; the *king*, as the repreſentative of the nation, has the right or *prerogative*, 1. Of ſending and receiving ambaſſadors. 2. Of making treaties. 3. Of proclaiming war or peace. 4. Of iſſuing repriſals. 5. Of granting ſafe conducts.

(7.) In *domeſtic* affairs; the *king* is, firſt, a conſtituent part of the ſupreme legiſlative power; hath a negative upon all new laws; and is bound by no ſtatute, unleſs ſpecially named therein.

(8.) He is alſo conſidered as the general of the kingdom, and may raiſe fleets and armies, build forts, appoint havens, erect beacons, prohibit the exportation of arms and ammunition, and confine his ſubjects within the realm, or recall them from foreign parts.

(9.) The *king* is alſo the fountain of juſtice, and general conſervator of the peace; and therefore may erect courts (wherein he hath a legal ubiquity), proſecute offenders, pardon crimes, and iſſue proclamations.

(10.) He is likewiſe the fountain of honour, of office, and of privilege.

(11.) He is alſo the arbiter of *domeſtic* commerce; (not of *foreign*, which is regulated by the law of merchants); and is therefore intitled to the erection of public marts, the regulation of weights and meaſures, and the coinage or legitimation of money.

(12.) The *king* is, laſtly, the ſupreme head of the church; and, as ſuch, convenes, regulates, and diſſolves ſynods, nominates biſhops, and receives appeals in all eccleſiaſtical cauſes.

li. Sect. VIII. *Of the king's revenue.*

(1.) The *king's revenue* is either *ordinary* or *extraordinary*. And the *ordinary* is, 1. *Eccleſiaſtical*. 2. *Temporal*.

(2.) The *king's eccleſiaſtical* revenue conſiſts in, 1. The cuſtody of the temporalties of vacant biſhoprics. 2. Corodies and penſions. 3. Extra-parochial tithes. 4. The firſt fruits and tenths of benefices.

(3.) The *king's* ordinary *temporal* revenue conſiſts in, 1. The demeſne lands of the crown. 2. The hereditary exciſe; being part of the conſideration for the purchaſe of his feodal profits, and the prerogatives of purveyance and pre-emption. 3. An annual ſum iſſuing from the duty on wine-licences; being the reſidue of the ſame conſideration. 4. His foreſts. 5. His courts of juſtice 6. Royal fiſh. 7. Wrecks, and things jetſam, flotſam, and ligan. 8. Royal mines. 9. Treaſure trove. 10. Waifs. 11. Eſtrays. 12. Forfeitures for offences, and deodands. 13. Eſcheats of lands. 14. Cuſtody of ideots and lunatics.

(4.) The *king's extraordinary revenue*, conſiſts in aids, ſubſidies, and ſupplies, granted him by the commons in parliament.

(5.) Heretofore theſe were uſually raiſed by grants of the (nominal) *tenth* or *fifteenth* part of the moveables in every townſhip; or by ſcutages, hydages, and talliages; which were ſucceeded by *ſubſidies* aſſeſſed upon individuals, with reſpect to their lands and goods.

(6.) A new ſyſtem of taxation took place about the time of the revolution: our modern taxes are therefore 1. *Annual*. 2. *Perpetual*.

(7.) The *annual taxes* are, 1. The land-tax, or the ancient ſubſidy raiſed upon a new aſſeſſment. 2. The malt-tax, being an annual exciſe on malt, mum, cyder, and perry.

(8.) The *perpetual* taxes are, 1. The cuſtoms, or tonnage and poundage of all merchandiſe exported or imported. 2. The exciſe duty, or inland impoſition on a great variety of commodities. 3. The ſalt-duty, or exciſe on ſalt. 4. The poſt-office, or duty for the carriage of letters. 5. The ſtamp-duty on paper, parchment, &c. 6. The duty on houſes and windows. 7. The duty on licences for hackney coaches and chairs. 8. The duty on offices and penſions.

(9.) Part of this revenue is applied to pay the intereſt of the national debt, till the principal is diſcharged by parliament.

(10.) The produce of theſe ſeveral taxes were originally ſeparate and *ſpecific funds*, to anſwer *ſpecific loans* upon their reſpective credits; but are now conſolidated by parliament into three principal funds, the *aggregate*, *general*, and *South-ſea* funds, to anſwer *all* the debts of the nation: the public faith being alſo ſuperadded, to ſupply deficiencies, and ſtrengthen the ſecurity of the whole.

(11.) The ſurpluſſes of theſe funds, after paying the intereſt of the national debt, are carried together, and denominated the *ſinking* fund: which, unleſs otherwiſe appropriated by parliament, is annually to be applied towards paying off ſome part of the principal.

(12.) But, previous to this, the *aggregate* fund is now charged with an annual ſum for the *civil liſt*; which is the immediate proper revenue of the crown, ſettled by parliament on the king at his acceſſion, for defraying the charges of civil government.

lii. Sect. IX. *Of ſubordinate magiſtrates.*

(1.) SUBORDINATE magiſtrates, of the moſt general uſe and authority, are, 1. *Sheriffs*. 2. *Coroners*. 3. *Juſtices* of the *Peace*. 4. *Conſtables*. 5. *Surveyors* of the *highways*. 6. *Overſeers* of the *poor*.

(2.) The *ſheriff* is the keeper of each county, annually nominated in due form by the king; and is (within his county) a judge, a conſervator of the peace, a miniſterial officer, and the king's bailiff.

(3.) *Coroners* are permanent officers of the crown in each county, elected by the freeholders; whoſe office it is to make enquiry concerning the death of the king's ſubjects, and certain revenues of the crown; and alſo, in particular caſes, to ſupply the office of ſheriff.

(4.) *Juſtices* of the *peace* are magiſtrates in each county, ſtatutably qualified, and commiſſioned by the king's majeſty: with authority to conſerve the peace; to hear and determine felonies, and other miſdemeanors; and to do many other acts committed to their charge by particular ſtatutes.

(5.) *Conſtables* are officers of hundreds and townſhips, appointed at the leet, and empowered to preſerve the peace, to keep watch and ward, and to apprehend offenders.

(6.) *Surveyors* of the *highways* are officers appointed annually in every pariſh; to remove annoyances in and to direct the reparation of the public roads.

(7.) *Overſeers* of the *poor* are officers appointed annually in every pariſh; to relieve ſuch impotent, and employ ſuch ſturdy poor, as are *ſettled* in each pariſh, —by birth,—by parentage,—by marriage,—or by

40 days reſidence; accompanied with, 1. Notice. 2. Renting a tenement of ten pounds annual value. 3. Paying their aſſeſſed taxations. 4. Serving an annual office. 5. Hiring and ſervice for a year. 6. Apprenticeſhip for ſeven years. Having a ſufficient eſtate in the pariſh.

liii. SECT. X. *Of the people, whether aliens, denizens, or natives.*

(1.) THE *people* are either *aliens*, that is, born out of the dominions, or allegiance, of the crown of Great Britain; or *natives*, that is, born within it.

(2.) Allegiance is the duty of all ſubjects; being the reciprocal tie of the people to the prince, in return for the protection he affords them; and, in *natives*, this duty of allegiance is natural and perpetual; in *aliens*, is local and temporary only.

(3.) The rights of *natives* are alſo natural and perpetual: thoſe of *aliens*, local and temporary only; unleſs they be made denizens by the king, or naturaliſed by parliament.

liv. SECT. XI. *Of the clergy.*

(1.) THE people, whether aliens, denizens, or natives, are alſo either *clergy*, that is, all perſons in holy orders, or in eccleſiaſtical offices; or *laity*, which comprehends the reſt of the nation.

(2.) The *clerical* part of the nation, thus defined, are, 1. Archbiſhops and biſhops; who are elected by their ſeveral chapters, at the nomination of the crown, and afterwards confirmed and conſecrated by each other. 2. Deans and chapters. 3. Arch-deacons. 4. Rural deans. 5. Parſons (under which are included appropriators) and vicars; to whom there are generally requiſite, holy orders, preſentation, inſtitution, and induction. 6. Curates. To which may be added, 7. Church-wardens. 8. Pariſh-clerks and ſextons.

lv. SECT. XII. *Of the civil ſtate.*

(1.) THE *laity* are diviſible into three ſtates; *civil*, *military*, and *maritime*.

(2.) The *civil* ſtate (which includes all the nation, except the clergy, the army, and the navy, and many individuals among them alſo), may be divided into the *nobility* and the *commonalty*.

(3.) The *nobility* are dukes, marquiſes, earls, viſcounts, and barons. Theſe had anciently duties annexed to their reſpective honours: they are created either by writ, that is by ſummons to parliament; or by the king's letters-patent, that is, by royal grant: and they enjoy many privileges excluſive of their ſenatorial capacity.

(4.) The *commonalty* conſiſt of knights of the garter, knights bannerets, baronets, knights of the bath, knights bachelors, eſquires, gentlemen, yeomen, tradeſmen, artificers, and labourers.

lvi. SECT. XIII. *Of the military and maritime ſtates.*

(1.) THE *military* ſtate, by the ſtanding conſtitutional law, conſiſts of the militia of each county, raiſed from among the people by lot, officered by the principal landholders, and commanded by the lord lieutenant.

(2.) The more diſciplined occaſional troops of the kingdom are kept on foot only from year to year by parliament; and, during that period, are governed by martial law, or arbitrary articles of war, formed at the pleaſure of the crown.

(3.) The *maritime* ſtate conſiſts of the officers and mariners of the Britiſh navy; who are governed by expreſs and permanent laws, or the articles of the navy, eſtabliſhed by act of parliament.

lvii. SECT. XIV. *Of maſter and ſervant.*

(1.) THE *private*, economical, *relations* of perſons are thoſe of, 1. *Maſter* and *ſervant*. 2. *Huſband* and *wife*. 3. *Parent* and *child*. 4. *Guardian* and *ward*.

(2.) The firſt relation may ſubſiſt between a *maſter* and four ſpecies of *ſervants*; (for ſlavery is unknown in our laws): *viz.* 1. Menial ſervants; who are *hired*. 2. Apprentices, who are *bound* by indentures. 3. Labourers; who are caſually *employed*. 4. Stewards, bailiffs, and factors; who are rather in a *miniſterial* ſtate.

(3.) From this relation reſult divers powers to the maſter, and emoluments to the ſervant.

(4.) The maſter hath a property in the ſervice of his ſervant; and muſt be anſwerable for ſuch acts as the ſervant does by his expreſs, or implied, command.

lviii. SECT. XV. *Of huſband and wife.*

(4.) THE ſecond private relation is that of *marriage*; which includes the reciprocal rights and duties of *huſband* and *wife*.

(2.) *Marriage* is duly contracted between perſons, 1. Conſenting: 2. Free from canonical impediments, which make it *voidable*: 3. Free alſo from the civil impediments,—of prior marriage,—of want of age,—of non-conſent of parents or guardians, where requiſite,—and of want of reaſon; either of which make it totally *void*. And it muſt be celebrated by a clergyman in due form and place.

(3.) Marriage is diſſolved, 1. By death. 2. By divorce in the ſpiritual court; not *a menſa et thoro* only, but *a vinculo matrimonii*, for canonical cauſe exiſting previous to the contract. 3. By act of parliament, as for adultery.

(4.) By marriage the huſband and wife become one perſon in law; which unity is the principal foundation of their reſpective rights, duties, and diſabilities.

lix. SECT. XVI. *Of parent and child.*

(1.) THE third, and moſt univerſal private relation, is that of *parent* and *child*.

(2.) *Children* are, 1. *Legitimate*; being thoſe who are born in lawful wedlock, or within a competent time after. 2. *Baſtards* being thoſe who are not ſo.

(3.) The duties of parents to *legitimate* children are, 1. Maintenance. 2. Protection. 3. Education.

(4.) The power of parents conſiſts principally in correction, and conſent to marriage. Both may after death be delegated by will to a guardian; and the former alſo, living the parent, to a tutor or maſter.

(5.) The duties of *legitimate* children to parents are obedience, protection, and maintenance.

(6.) The duty of parents to *baſtards* is only that of maintenance.

(7.) The rights of a *baſtard* are ſuch only as he can acquire; for he is incapable of inheriting any thing.

lx. Sect. XVII. *Of guardian and ward.*

(1.) The fourth private relation is that of *guardian* and *ward*, which is plainly derived from the laſt; theſe being, during the continuance of their relation, reciprocally ſubject to the ſame rights and duties.

(2.) *Guardians* are of divers ſorts: 1. Guardians by nature, or the parents. 2. Guardians for nurture, aſſigned by the eccleſiaſtical courts. 3. Guardians in ſocage, aſſigned by the common law. 4. Guardians by ſtatute, aſſigned by the father's will. All ſubject to the ſuperintendance of the court of chancery.

(3.) *Full age* in male or female for all purpoſes is the age of 21 years (different ages being allowed for different purpoſes); till which age the perſon is an *infant*.

(4.) An *infant*, in reſpect of his tender years, hath various privileges, and various diſabilities, in law; chiefly with regard to ſuits, crimes, eſtates, and contracts.

lxi. Sect. XVIII. *Of corporations.*

(1.) Bodies politic, or *corporations*, which are *artificial* perſons, are eſtabliſhed for preſerving in perpetual ſucceſſion certain rights; which, being conferred on *natural* perſons only, would fail in proceſs of time.

(2.) Corporations are, 1. *Aggregate*, conſiſting of many members. 2. *Sole*, conſiſting of one perſon only.

(3.) Corporations are alſo either *ſpiritual*, erected to perpetuate the rights of the church; or *lay*. And the lay are, 1. *Civil;* erected for many temporal purpoſes. 2. *Eleemoſynary;* erected to perpetuate the charity of the founder.

(4.) Corporations are uſually erected and named, by virtue of the king's royal charter; but may be created by act of parliament.

(5.) The powers incident to all corporations are, 1. To maintain perpetual ſucceſſion. 2. To act in their corporate capacity like an individual. 3. To hold lands, ſubject to the ſtatutes of mortmain. 4. To have a common ſeal. 5. To make by-laws. Which laſt power, in ſpiritual or eleemoſynary corporations, may be executed by the king or the founder.

(6.) The duty of corporations is to anſwer the ends of their inſtitution.

(7.) To enforce this duty, all corporations may be *viſited:* ſpiritual corporations by the ordinary; lay corporations by the founder, or his repreſentatives; *viz.* the civil by the king (who is the *fundator incipiens* of all) repreſented in his court of king's bench; the eleemoſynary by the endower (who is the *fundator perficiens* of ſuch), or by his heirs or aſſigns.

(8.) Corporations may be diſſolved, 1. By act of parliament. 2. By the natural death of all their members. 3. By ſurrender of their franchiſes. 4. By forfeiture of their charter.

CHAP. II. lxii.

Of the Rights *of* Things.

Sect. I. *Of Property in general.* lxiii.

(1.) All *dominion* over external objects has its original from the gift of the Creator to man in general.

(2.) The *ſubſtance* of things was, at firſt, common to all mankind; yet a temporary property, in the *uſe* of them, might even then be acquired, and continued, by *occupancy*.

(3.) In proceſs of time a permanent property was eſtabliſhed in the *ſubſtance*, as well as the *uſe*, of things; which was originally acquired by *occupancy* only.

(4.) Leſt this property ſhould determine by the owner's dereliction or death, whereby the thing would again become common, ſocieties have eſtabliſhed *conveyances*, *wills*, and *heirſhips*, in order to continue the property of the firſt occupant: and, where by accident ſuch property becomes diſcontinued or unknown, the thing uſually reſults to the *ſovereign* of the ſtate, by virtue of the municipal law.

(5.) But of ſome things, which are incapable of permanent ſubſtantial dominion, there ſtill ſubſiſts only the ſame tranſient uſufructuary property, which originally ſubſiſted in all things.

Sect. II. *Of real property; and, firſt, of corporeal hereditaments.* lxiv.

(1.) In this *property*, or excluſive dominion, conſiſt the *rights* of *things;* which are, 1. Things *real.* 2. Things *perſonal.*

(2.) In things *real* may be conſidered, 1. Their ſeveral *kinds*. 2. The *tenures* by which they may be holden. 3. The *eſtates* which may be acquired therein. 4. The *title*, or the means of acquiring and loſing them.

(3.) All the ſeveral *kinds* of things real are reducible to one of theſe three, viz. *lands*, *tenements*, or *hereditaments;* whereof the ſecond includes the firſt, and the third includes the firſt and ſecond.

(4.) *Hereditaments*, therefore, or whatever may come to be inherited (being the moſt comprehenſive denomination of things real), are either *corporeal* or *incorporeal*.

(5.) *Corporeal* hereditaments conſiſt wholly of *lands*, in their largeſt legal ſenſe; wherein they include not only the face of the earth, but every other object of ſenſe adjoining thereto, and ſubſiſting either above or beneath it.

Sect. III. *Of incorporeal hereditaments.* lxv.

(1.) Incorporeal hereditaments are rights iſſuing out of things corporeal, or concerning, or annexed to, or exerciſable within the ſame.

(2.) Incorporeal hereditaments are, 1. *Advowſons.* 2. *Tithes.* 3. *Commons.* 4. *Ways.* 5. *Offices.* 6. *Dignities.* 7. *Franchiſes.* 8. *Corodies* or *penſions.* 9. *Annuities.* 10. *Rents.*

(3.) An *advowſon* is a right of preſentation to an eccleſiaſtical benefice; either appendant, or in groſs. This may be, 1. Preſentative. 2. Collative. 3. Donative.

(4.) *Tithes* are the tenth part of the increaſe yearly ariſing from the profits and ſtock of lands, and the perſonal induſtry of mankind. Theſe, by the ancient and poſitive law of the land, are due of common right to the parſon, or (by endowment) to the vicar; unleſs ſpecially diſcharged, 1. By real compoſition. 2. By preſcription, either *de modo decimandi*, or *de non decimando*.

(5.) *Common* is a profit which a man hath in the lands of another; being, 1. Common of paſture; which is either appendant, appurtenant, becauſe of vicinage, or in groſs. 2. Common of piſcary. 3. Common of turbary. 4. Common of eſtovers, or botes.

(6.) *Ways* are a right of paſſing over another man's ground.

(7.) *Offices* are the right to exerciſe a public or private employment.

(8.) For *dignities*, which are titles of honour, ſee Chap. I. Sect. 12.

(9.) *Franchiſes* are a royal privilege, or branch of the king's prerogative, ſubſiſting in the hands of a ſubject.

(10.) *Corodies* are allotments for one's ſuſtenance; which may be converted into *penſions*, ſee Chap. I. Sect. 8.

(11.) An *annuity* is a yearly ſum of money, charged upon the perſon, and not upon the lands of the granter.

(12.) *Rents* are a certain profit iſſuing yearly out of lands and tenements; and are reducible to, 1. Rent-ſervice. 2. Rent-charge. 3. Rent-ſeck.

lxvi. SECT IV. *Of the Feodal Syſtem.*

(1.) THE doctrine of *tenures* is derived from the *feodal* law; which was planted in Europe by its northern conquerors at the diſſolution of the Roman empire.

(2.) Pure and *proper feuds* were parcels of land allotted by a chief to his followers, to be held on the condition of perſonally rendering due military ſervice to their lord.

(3.) Theſe were granted by inveſtiture; were held under the bond of fealty; were inheritable only by deſcendants; and could not be transferred without the mutual conſent of the lord and vaſſal.

(4.) *Improper feuds* were derived from the other; but differed from them in their original, their ſervices and renders, their deſcent, and other circumſtances.

(5.) The lands of England were converted into *feuds*, of the improper kind, ſoon after the Norman conqueſt; which gave riſe to the grand maxim of tenure, viz. That all lands in the kingdom are *holden*, mediately or immediately, of the king.

lxvii. SECT. V. *Of the ancient Engliſh Tenures.*

(1.) THE diſtinction of tenures conſiſted in the nature of their ſervice: as, 1. *Chivalry*, or *knight-ſervice*; where the ſervice was free, but uncertain. 2. *Free ſocage*; where the ſervice was free, and certain. 3. Pure *villenage*; where the ſervice was baſe, and uncertain. 4. *Privileged villenage*, or *villein ſocage*; where the ſervice was baſe, but certain.

(2.) The moſt univerſal ancient tenure was that in *chivalry*, or by *knight-ſervice*; in which the tenant of every knight's fee was bound, if called upon, to attend his lord to the wars. This was granted by livery, and perfected by homage and fealty; which uſually drew after them ſuit of court.

(3.) The other fruits and conſequences of the tenure by knight-ſervice were, 1. Aid. 2. Relief. 3. Primer ſeiſin. 4. Wardſhip. 5. Marriage. 6. Fines upon alienation. 7. Eſcheat.

(4.) *Grand ſerjeanty* differed from chivalry principally in its render, or ſervice; and not in its fruits and conſequences.

(5.) The perſonal ſervice in chivalry was at length gradually changed into pecuniary aſſeſſments, which were called *ſcutage* or *eſcuage*.

(6.) The military tenures (except the ſervices of grand ſerjeanty) were, at the reſtoration of King Charles, totally aboliſhed, and reduced to free ſocage by act of parliament.

SECT. VI. *Of the modern Engliſh Tenures.* lxviii.

(1.) FREE *ſocage* is a tenure by any free, certain, and determinate ſervice.

(2.) This tenure, the relic of Saxon liberty, includes *petit ſerjeanty*, tenure in *burgage*, and *gavelkind*.

(3.) Free ſocage lands partake ſtrongly of the feodal nature, as well as thoſe in chivalry: being holden; ſubject to ſome ſervice, at the leaſt to fealty and ſuit of court; ſubject to relief, to wardſhip, and to eſcheat, but not to marriage; ſubject alſo formerly to aids, primer ſeiſin, and fines for alienation.

(4.) *Pure villenage* was a precarious and ſlaviſh tenure, at the abſolute will of the lord, upon uncertain ſervices of the baſeſt nature.

(5.) From hence, by tacit conſent or encroachment, have ariſen the modern *copyholds*, or tenure by copy of court-roll; in which lands may be ſtill held at the (nominal) will of the lord, (but regulated) according to the cuſtom of the manor.

(6.) Theſe are ſubject, like ſocage lands, to ſervices relief, and eſcheat; and alſo to heriots, wardſhip, and fines upon deſcent and alienation.

(7.) *Privileged villenage*, or *villein ſocage*, is an exalted ſpecies of copyhold tenure, upon baſe, but certain, ſervices; ſubſiſting only in the ancient demeſnes of the crown; whence the tenure is denominated the tenure in *ancient demeſne*.

(8.) Theſe copyholds of ancient demeſne have divers immunities annexed to their tenure; but are ſtill held by copy of court-roll, according to the cuſtom of the manor, though not at the will of the lord,

(9.) *Frankalmoign* is a tenure by ſpiritual ſervices at large, whereby many eccleſiaſtical and eleemoſynary corporations now hold their lands and tenements; being of a nature diſtinct from tenure by divine ſervice in certain.

SECT. VII. *Of freehold eſtates of inheritance.* lxix.

(1.) ESTATES in lands, tenements, and hereditaments, are ſuch intereſt as the tenant hath therein; to aſcertain which, may be conſidered, 1. The *quantity* of *intereſt*. 2. The *time* of *enjoyment*. 3. The *number* and *connections* of the *tenants*.

(2.) Eſtates, with reſpect to their *quantity* of *intereſt*, or duration, are either *freehold*, or *leſs* than *freehold*.

(3.) A *freehold* eſtate, in lands, is ſuch as is created by livery of ſeiſin at common law; or, in tenements of an incorporeal nature, by what is equivalent thereto.

(4.) Freehold eſtates are either eſtates of *inheritance*, or *not* of *inheritance*, viz. for *life* only: and *inheritance* are, 1. *Abſolute*, or *fee ſimple*. 2. *Limited fees*.

(5.) Tenant in *fee ſimple* is he that hath lands, tenements, or hereditaments, to hold to him and his heirs for ever.

(6.) *Limited fees* are, 1. *Qualified* or *baſe*, fees. 2. Fees *conditional* at the common law.

(7.) *Qualified* or *baſe* fees are thoſe which, having a qualification ſubjoined thereto, are liable to be defeated when the qualification is at an end.

(8.) *Conditional* fees, at the common law, were ſuch as were granted to the donee, and the heirs of his body, in excluſion of collateral heirs.

(9.) Theſe were held to be fees, granted on condition that the donee had iſſue of his body; which condition being once performed by the birth of iſſue, the donee might immediately aliene the land: but the ſtatute *de donis* being made to prevent ſuch alteration, thereupon from the diviſion of the fee (by conſtruction of this ſtatute) into a particular eſtate and a reverſion, the conditional fees began to be called *fees-tail*.

(10.) All tenements real, or ſavouring of the realty, are ſubject to entails.

(11.) Eſtates tail may be, 1. general, or ſpecial; 2. male or female; 3. given in frank marriage.

(12.) Incident to eſtates tail are, 1. Waſte. 2. Dower. 3. Curteſy. 4. Bar;—by fine, recovery, or lineal warranty with aſſets.

(13.) Eſtates tail are now, by many ſtatutes and reſolutions of the courts, almoſt brought back to the ſtate of conditional fees at the common law.

lxx. Sect. VIII. *Of freeholds, not of inheritance.*

(1.) Freeholds, *not* of *inheritance*, or for *life* only, are, 1. *Conventional*, or created by the act of the parties. 2. *Legal*, or created by operation of law.

(2.) *Conventional* eſtates for *life* are created by an expreſs grant for term of one's own life, or *pur auter vie*; or by a general grant, without expreſſing any term at all.

(3.) Incident to this, and all other eſtates for life, are eſtovers, and emblements: and to eſtates *per auter vie* general occupancy was alſo incident; as ſpecial occupancy ſtill is, if *ceſtuy que vie* ſurvives the tenant.

(4.) *Legal* eſtates for *life* are, 1. Tenancy in *tail*, after *poſſibility* of iſſue *extinct*. 2. Tenancy by the *curteſy* of England. 3. Tenancy in *dower*.

(5.) Tenancy in *tail*, after *poſſibility* of iſſue *extinct*, is where an eſtate is given in ſpecial tail; and, before iſſue had, a perſon dies from whoſe body the iſſue was to ſpring; whereupon the tenant (if ſurviving) becomes tenant in *tail*, after *poſſibility* of iſſue *extinct*.

(6.) This eſtate partakes both of the incidents to an eſtate tail, and thoſe of an eſtate for life.

(7.) Tenancy by the *curteſy* of England is where a man's wife is ſeiſed of an eſtate of inheritance; and he by her has iſſue, born alive, which was capable of inheriting her eſtate; in which caſe he ſhall, upon her death, hold the tenements for his own life, as tenant by the *curteſy*.

(8.) Tenancy in *dower* is where a woman's huſband is ſeiſed of an eſtate of inheritance, of which her iſſue might by any poſſibility have been heir; and the huſband dies: the woman is thereupon intitled to *dower*, or one third part of the lands and tenements, to hold for her natural life.

(9.) Dower is either by the common law; by ſpecial cuſtom; *ad oſtium eccleſiæ*; or, *ex aſſenſu patris*.

(10.) Dower may be forfeited or barred, particularly by an eſtate in *jointure*.

Sect. IX. *Of eſtates leſs than freehold.* lxxi.

(1.) Estates *leſs* than *freehold* are, 1. Eſtates for *years*. 2. Eſtates at *will*. 3. Eſtates at *ſufferance*.

(2.) An eſtate for *years* is where a man, ſeized of lands and tenements, letteth them to another for a certain period of time, which transfers the intereſt of the term; and the leſſee enters thereon, which gives him poſſeſſion of the term, but not legal ſeiſin of the land.

(3.) Incident to this eſtate are eſtovers; and alſo emblements, if it determines before the full end of the term.

(4.) An eſtate at *will* is where lands are let by one man to another, to hold at the will of both parties; and the leſſee enters thereon.

(5.) *Copyholds* are eſtates held at the will of the lord, (regulated) according to the cuſtom of the manor.

(6.) An eſtate at *ſufferance* is where one comes into poſſeſſion of land by lawful title, but keeps it afterwards without any title at all.

Sect. X. *Of eſtates upon condition.* lxxii.

(1.) Estates (whether freehold or otherwiſe) may alſo be held upon *condition*; in which caſe their exiſtence depends on the happening, or not happening, of ſome uncertain event.

(2.) Theſe eſtates are, 1. On condition *implied*. 2. On condition *expreſſed*. 3. Eſtates in *gage*. 4. Eſtates by *ſtatute*, merchant or ſtaple. 5. Eſtates by *elegit*.

(3.) Eſtates on condition *implied* are where a grant of an eſtate has, from its eſſence and conſtitution, a condition inſeparably annexed to it; though none be expreſſed in words.

(4.) Eſtates on condition *expreſſed* are where an expreſs qualification or proviſion is annexed to the grant of an eſtate.

(5.) On the performance of theſe conditions either expreſſed or implied (if *precedent*) the eſtate may be veſted or enlarged; or, on the breach of them (if *ſubſequent*) an eſtate already veſted may be defeated.

(6.) Eſtates in *gage*, *in vadio*, or in pledge, are eſtates granted as a ſecurity for money lent; being,

1. *In vivo vadio*, or *living gage;* where the profits of land are granted till a debt be paid, upon which payment the granter's eſtate will revive. 2. *In mortuo vadio*, in *dead*, or *mort gage;* where an eſtate is granted, on condition to be void at a day certain, if the granter then repays the money borrowed; on failure of which, the eſtate becomes abſolutely dead to the granter.

(7.) Eſtates by *ſtatute*-merchant, or *ſtatute*-ſtaple, are alſo eſtates conveyed to creditors, in purſuance of certain ſtatutes, till their profits ſhall diſcharge the debt.

(8.) Eſtates by *elegit* are where, in conſequence of a judicial writ ſo called, lands are delivered by the ſheriff to a plaintiff, till their profits ſhall ſatisfy a debt adjudged to be due by law.

lxxiii. SECT. XI. *Of eſtates in poſſeſſion, remainder, and reverſion.*

(1.) ESTATES, with reſpect to their *time* of *enjoyment*, are either in immediate *poſſeſſion*, or in *expectancy;* which eſtates in *expectancy* are created at the ſame time, and are parcel of the ſame eſtates, as thoſe upon which they are expectant. Theſe are, 1. *Remainders.* 2. *Reverſions.*

(2.) A *remainder* is an eſtate limited to take effect, and be enjoyed, after another *particular* eſtate is determined.

(3.) Therefore, 1. There muſt be a precedent particular eſtate, in order to ſupport a remainder. 2. The remainder muſt paſs out of the granter, at the creation of the particular eſtate. 3. The remainder muſt veſt in the grantee, during the continuance, or at the determination, of the particular eſtate.

(4.) Remainders are, 1. Veſted; where the eſtate is fixed to remain to a *certain* perſon, after the particular eſtate is ſpent. 2. Contingent; where the eſtate is limited to take effect, either to an *uncertain* perſon, or upon an *uncertain* event.

(5.) An *executory deviſe* is ſuch a diſpoſition of lands, by will, that an eſtate ſhall not veſt thereby at the death of the deviſor, but only upon ſome future contingency, and without any precedent particular eſtate to ſupport it.

(6.) A *reverſion* is the reſidue of an eſtate left in the granter, to commence in poſſeſſion after the determination of ſome *particular* eſtate granted: to which are incident fealty, and rent.

(7.) Where two eſtates, the one leſs, the other greater, the one in poſſeſſion, the other in expectancy, meet together in one and the ſame perſon, and in one and the ſame right, the leſs is *merged* in the greater.

lxxiv. SECT. XII. *Of eſtates, in ſeveralty, joint tenancy, coparcenary, and common.*

(1.) ESTATES, with reſpect to the *number* and *connections* of their *tenants*, may be held, 1. *In ſeveralty.* 2. In *joint-tenancy.* 3. In *coparcenary.* 4. In *common.*

(2.) An eſtate in *ſeveralty* is where one tenant holds it in his own ſole right, without any other perſon being joined with him.

(3.) An eſtate in *joint-tenancy* is where an eſtate is granted to two or more perſons; in which caſe the law conſtrues them to be *joint-tenants*, unleſs the words of the grant expreſsly exclude ſuch conſtruction.

(4.) Joint-tenants have an unity of intereſt, of title, of time, and of poſſeſſion: they are raiſed *per my & per tout:* and therefore upon the deceaſe of one joint-tenant, the whole intereſt remains to the ſurvivor.

(5.) Joint-tenancy may be diſſolved, by deſtroying one of its four conſtituent unities.

(6.) An eſtate in *coparcenary* is where an eſtate of inheritance deſcends from the anceſtor to two or more perſons; who are called *parceners*, and all together make but one heir.

(7.) Parceners have an unity of intereſt, title, and poſſeſſion; but are only ſeized *per my*, and not *per tout:* wherefore there is no ſurvivorſhip among parceners.

(8.) Incident to this eſtate is the law of *hotchpot*.

(9.) Coparcenary may alſo be diſſolved, by deſtroying any of its three conſtituent unities.

(10.) An eſtate in *common* is where two or more perſons hold lands, poſſibly by diſtinct titles, and for diſtinct intereſts; but by unity of poſſeſſion, becauſe none knoweth his own ſeveralty.

(11.) Tenants in common have therefore an unity of poſſeſſion, (without ſurvivorſhip; being ſeized *per my*, and not *per tout;*) but no neceſſary unity of title, time, or intereſt.

(12.) This eſtate may be created, 1. By diſſolving the conſtituent unities of the two former; 2. By expreſs limitation in a grant: and may be deſtroyed, 1. By uniting the ſeveral titles in one tenant; 2. By partition of the land.

SECT. XIII. *Of the title to things real, in general.* lxxv.

(1.) A *title* to things real is the means whereby a man cometh to the juſt poſſeſſion of his property.

(2.) Herein may be conſidered, 1. A mere or naked poſſeſſion. 2. The right of poſſeſſion; which is, 1*ſt*, an apparent, 2*dly*, an actual right. 3. The mere right of property. 4. The conjunction of actual poſſeſſion with both theſe rights; which conſtitutes a perfect *title*.

SECT. XIV. *Of title by deſcent.* lxxvi.

(1.) THE *title* to things real may be reciprocally acquired or loſt, 1. By *deſcent*. 2. By *purchaſe*.

(2.) *Deſcent* is the means whereby a man, on the death of his anceſtor, acquires a title to his eſtate, in right of repreſentation, as his *heir* at law.

(3.) To underſtand the doctrine of deſcents, we muſt form a clear notion of *conſanguinity;* which is the connection, or relation, of perſons deſcended from the ſame ſtock or common anceſtor; and it is, 1. *Lineal*, where one of the kinſmen is lineally deſcended from the other. 2. *Collateral*, where they are lineally deſcended, not one from the other, but both from the ſame common anceſtor.

(4.) The rules of deſcent, or *canons*, of *inheritance*, obſerved by the laws of England, are theſe:

1*ſt*, Inheritances ſhall lineally *deſcend* to the *iſſue* of the perſon laſt actually ſeiſed, *in infinitum;* but ſhall never lineally *aſcend.*

2d, The *male* iſſue ſhall be admitted before the *female.*

3d, Where there are two or more males in equal degree, the *eldeſt* only ſhall inherit; but the females *all* together.

4th, The lineal deſcendants, *in infinitum*, of any perſon deceaſed ſhall *repreſent* their anceſtor; that is, ſhall ſtand in the ſame place as the perſon himſelf would have done, had he been living.

5th, On failure of *lineal* deſcendants, or iſſue, of the perſon laſt ſeiſed, the inheritance ſhall deſcend to the blood of the *firſt purchaſer;* ſubject to the three preceding rules. To evidence which blood, the two following rules are eſtabliſhed.

6th, The collateral heir of the perſon laſt ſeiſed muſt be his next collateral kinſman, of the *whole* blood.

7th, In collateral inheritances, the *male ſtocks* ſhall be preferred to the *female;* that is, kindred derived from the blood of the male anceſtors ſhall be admitted before thoſe from the blood of the female: unleſs where the lands have, in fact, deſcended from a female.

lxxvii. SECT. XV. *Of title by purchaſe, and firſt by eſcheat.*

(1.) PURCHASE, or perquiſition, is the poſſeſſion of an eſtate which a man hath by his own act or agreement; and not by the mere act of law, or deſcent from any of his anceſtors. This includes, 1. *Eſcheat.* 2. *Occupancy.* 3. *Preſcription.* 4. *Forfeiture.* 5. *Alienation.*

(2.) *Eſcheat* is where, upon deficiency of the tenant's *inheritable blood*, the eſtate falls to the lord of the fee.

(3.) *Inheritable blood* is wanting to, 1. Such as are not related to the perſon laſt ſeiſed. 2. His maternal relations in paternal inheritances, and *vice verſa.* 3. His kindred of the half blood. 4. Monſters. 5. Baſtards. 6. Aliens, and their iſſue. 7. Perſons attained of treaſon or felony. 8. Papiſts, in reſpect of themſelves only, by the ſtatute law.

lxxviii. SECT. XVI. *Of title by occupancy.*

(1.) OCCUPANCY is the taking poſſeſſion of thoſe things which before had no owner.

(2.) Thus, at the common law, where tenant *pur auter vie* died during the life of *ceſtuy que vie*, he, who could firſt enter, might lawfully retain the poſſeſſion; unleſs by the original grant the heir was made a *ſpecial* occupant.

(3.) The law of *derelictions* and *alluvions* has narrowed the title by occupancy.

lxxix. SECT. XVII. *Of title by preſcription.*

(1.) PRESCRIPTION (as diſtinguiſhed from *cuſtom*) is a *perſonal* immemorial uſage of enjoying a right in ſome incorporeal hereditament, by a man, and either his anceſtors or thoſe whoſe eſtate of inheritance he hath: of which the firſt is called *preſcribing in his anceſtors*, the latter in a *que eſtate.*

SECT. XVIII. *Of title by forfeiture.* lxxx.

(1.) FORFEITURE is a puniſhment annexed by law to ſome illegal act, or negligence, in the owner of things real; whereby the eſtate is transferred to another, who is uſually the party injured.

(2.) Forfeitures are occaſioned, 1. By *crimes.* 2 By *alienation*, contrary to law. 3. By *lapſe.* 4. By *ſimony.* 5. By *nonperformance* of *conditions.* 6. By *waſte.* 7. By *breach* of *copyhold cuſtoms.* 8. By *bankruptcy.*

(3.) Forfeitures for *crimes*, or miſdemeanors, are for, 1. Treaſon. 2. Felony. 3. Miſpriſion of treaſon. 4. *Præmunire.* 5. Aſſaults on a judge, and batteries, ſitting the courts. 6. Popiſh recuſancy, &c.

(4.) *Alienations*, or conveyances, which induce a forfeiture, are, 1. Thoſe in mortmain, made to corporations contrary to the ſtatute law. 2. Thoſe made to aliens. 3. Thoſe made by particular tenants, when larger than their eſtates will warrant.

(5.) *Lapſe* is a forfeiture of the right of preſentation to a vacant church, by neglect of the patron to preſent within ſix kalendar months.

(6.) *Simony* is the corrupt preſentation of any one to an eccleſiaſtical benefice, whereby that turn becomes forfeited to the crown.

(7.) For forfeiture by *nonperformance* of *conditions*, ſee Sect. 10.

(8.) *Waſte* is a ſpoil, or deſtruction, in any corporeal hereditaments, to the prejudice of him that hath the inheritance.

(9.) *Copyhold* eſtates may have alſo other peculiar cauſes of forfeiture, according to the cuſtom of the manor.

(10.) *Bankruptcy* is the act of becoming a *bankrupt;* that is, a trader who ſecretes himſelf, or does certain other acts tending to defraud his creditors, (See Sect. 22.)

(11.) By bankruptcy all the eſtates of the bankrupt are transferred to the aſſignees of his commiſſioners, to be ſold for the benefit of his creditors.

SECT. XIX. *Of title by alienation.* lxxxi.

(1.) ALIENATION, conveyance, or purchaſe in its more limited ſenſe, is a means of transferring real eſtates, wherein they are voluntarily reſigned by one man, and accepted by another.

(2.) This formerly could not be done by a tenant, without *licence* from his lord; nor by a lord, without *attornment* of his tenant.

(3.) All perſons are *capable* of purchaſing; and all that are in poſſeſſion of any eſtates, are *capable* of conveying them: unleſs under peculiar diſabilities by law; as being attainted, *non compotes*, infants, under dureſs, feme-coverts, aliens, or papiſts.

(4.) Alienations are made by *common aſſurances;* which are, 1. By *deed*, or matter in *pais.* 2. By matter of *record.* 3. By ſpecial *cuſtom.* 4. By *deviſe.*

SECT. XX. *Of alienation by deed.* lxxxii.

(1.) IN aſſurances by *deed* may be conſidered, 1. Its *general nature.* 2. Its *ſeveral ſpecies.*

(2.) A deed, in *general*, is the ſolemn act of the parties; being uſually a writing ſealed and delivered; and it may be, 1. A deed indented, or indenture. 2. deed-poll.

(3.) The *requiſites* of a deed are, 1. Sufficient *parties*, and proper *ſubject-matter*. 2. A good and ſufficient *conſideration*. 3. *Writing* on paper, or parchment, duly ſtamped. 4. Legal and orderly *parts:* (which are uſually, 1ſt, the premiſes; 2dly, the *habendum;* 3dly, the *tenendum;* 4thly, the *reddendum;* 5thly, the conditions; 6thly, the warrantry, which is either lineal or collateral; 7thly, the covenants; 8thly, the concluſion, which includes the date). 5. *Reading* it, if deſired. 6. *Sealing*, and, in many caſes, *ſigning* it alſo. 7. *Delivery*. 8. *Atteſtation*.

(4.) A deed may be *avoided*, 1. By the want of any of the requiſites beforementioned. 2. By ſubſequent matter; as, 1ſt, Raſure, or alteration. 2dly, Defacing its ſeal. 3dly, Cancelling it. 4thly, Diſagreement of thoſe whoſe conſent is neceſſary. 5thly, Judgment of a court of juſtice.

(5.) Of the ſeveral *ſpecies* of deeds, ſome ſerve to *convey* real property, ſome only to *charge* and *diſcharge* it.

(6.) Deeds which ſerve to *convey* real property, or *couveyances*, are either by *common law*, or by *ſtatute*. And, of conveyances by *common law*, ſome are *original* or primary, others *derivative* or ſecondary.

(7.) *Original* conveyances are, 1. *Feoffments*. 2. *Gifts*. 3. *Grants*. 4. *Leaſes*. 5. *Exchanges*. 6. *Partitions*. *Derivative* are, 7. *Releaſes*. 8. *Confirmations*. 9. *Surrenders*. 10. *Aſſignments*. 11. *Defeazances*.

(8.) A *feoffment* is the transfer of any *corporeal* hereditament to another, perfected by *livery* of *ſeiſin*, or delivery of bodily poſſeſſion from the feoffer to the feoffee; without which no freehold eſtate therein can be created at common law.

(9.) A *gift* is properly the conveyance of lands in tail.

(10.) A *grant* is the regular method, by common law, of conveying *incorporeal* hereditaments.

(11.) A *leaſe* is the demiſe, granting, or letting to farm of any tenement, uſually for a leſs term than the leſſor hath therein; yet ſometimes poſſibly for a greater; according to the regulations of the reſtraining and enabling ſtatutes.

(12.) An *exchange* is the mutual conveyance of equal intereſts, the one in conſideration of the other.

(13.) A *partition* is the diviſion of an eſtate held in joint-tenancy, in coparcenary, or in common, between the reſpective tenants; ſo that each may hold his diſtinct part in ſeveralty.

(14.) A *releaſe* is the diſcharge or conveyance of a man's right, in lands and tenements, to another that hath ſome former eſtate in poſſeſſion therein.

(15.) A *confirmation* is the conveyance of an eſtate or right *in eſſe*, whereby a voidable eſtate is made ſure, or a particular eſtate is increaſed.

(16.) A *ſurrender* is the yielding up of an eſtate for life, or years, to him that hath the immediate remainder or reverſion; wherein the particular eſtate may merge.

(17.) An *aſſignment* is the transfer, or making over to another, of the whole right one has in any eſtate; but uſually in a leaſe, for life or years.

(18.) A *defeazance* is a collateral deed, made at the ſame time with the original conveyance; containing ſome condition, upon which the eſtate may be defeated.

(19.) Conveyances by *ſtatute* depend much on the doctrine of *uſes* and *truſts:* which are a confidence repoſed in the *terre tenant*, or tenant of the land, that he ſhall permit the profits to be enjoyed, according to the directions of *ceſtuy que uſe*, or *ceſtuy que truſt*.

(20.) The ſtatute of uſes, having transferred all uſes into actual poſſeſſion, (or, rather, having drawn the poſſeſſion to the uſe), has given birth to divers other ſpecies of conveyance: 1. A *covenant* to ſtand ſeiſed to *uſe*. 2. A *bargain* and *ſale*, enrolled. 3. A *leaſe* and *releaſe*. 4. A deed to *lead* or *declare* the uſe of other more direct conveyances. 5. A *revocation* of *uſes;* being the execution of a power, reſerved at the creation of the uſe, of recalling at a future time the uſe or eſtate ſo creating. All which owe their preſent operation principally to the ſtatute of uſes.

(21.) Deeds which do not *convey*, but only *charge* real property, and *diſcharge* it, are, 1. *Obligations*. 2. *Recognizances*. 3. *Defeazances* upon both.

Sect. XXI. *Of alienation by matter of record.* lxxxiii.

(1.) Assurances by matter of *record* are where the ſanction of ſome court of record is called in, to ſubſtantiate and witneſs the transfer of real property. Theſe are, 1. *Private acts of parliament*. 2. The *king's grants*. 3. *Fines*. 4. Common *recoveries*.

(2.) *Private acts* of *parliament* are a ſpecies of aſſurances, calculated to give (by the tranſcendent authority of parliament) ſuch reaſonable powers of relief as are beyond the reach of the ordinary courſe of law.

(3.) The *king's grants*, contained in charters or letters patent, are all entered on record, for the dignity of the royal perſon, and ſecurity of the royal revenue.

(4.) A *fine* (ſometimes ſaid to be a feoffment of record) is an amicable compoſition and agreement of an actual, or fictitious, ſuit; whereby the eſtate in queſtion is acknowledged to be the right of one of the parties.

(5.) The *parts* of a fine are, 1. The writ of covenant. 2. The licence to agree. 3. The concord. 4. The note. 5. The foot. To which the ſtatute hath added, 6. Proclamations.

(6.) Fines are of four *kinds:* 1. *Sur cognizance de droit, come ceo que il ad de ſon done*. 2. *Sur cognizance de droit tantum*. 3. *Sur conceſſit*. 4. *Sur done, grant, et render;* which is a double fine.

(7.) The *force* and *effect* of fines (when levied by ſuch as have themſelves any intereſt in the eſtate) are to aſſure the lands in queſtion to the cognizee, by barring the reſpective rights of parties, privies, and ſtrangers.

(8.) A common *recovery* is by an actual, or fictitious, ſuit or action for land, brought againſt the tenant of the freehold; who thereupon vouches another, who undertakes to warrant the tenant's title: but, upon ſuch vouchee's making default, the land is *recovered* by judgment at law againſt the tenant; who, in return, obtains judgment againſt the vouchee to recover lands of equal value in recompenſe.

(9.) The *force* and *effect* of a recovery are to aſſure lands to the recoverer, by barring eſtates tail, and all remainders and reverſions expectant thereon; provided the tenant in tail either ſuffers, or is vouched in, ſuch recovery.

(10.) The *uſes* of a fine or recovery may be directed by, 1. Deeds to *lead* ſuch uſes; which are made previous to the levying or ſuffering them. 2. Deeds to *declare* the uſes; which are made ſubſequent.

lxxxiv. SECT. XXII. *Of alienation by ſpecial cuſtom.*

(1.) ASSURANCES by ſpecial *cuſtom* are confined to the transfer of *copyhold* eſtates.

(2.) This is effected by, 1. *Surrender* by the tenant into the hands of the lord to the uſe of another, according to the cuſtom of the manor. 2. *Preſentment*, by the tenants or homage, of ſuch ſurrender. 3. *Admittance* of the ſurrenderee by the lord, according to the uſes expreſſed in ſuch ſurrender.

(3.) *Admittance* may alſo be had upon original *grants* to the tenant from the lord, and upon *deſcents* to the heir from the anceſtor.

lxxxv. SECT. XXIII. *Of alienation by deviſe.*

(1.) DEVISE is a diſpoſition of lands and tenements, contained in the laſt will and teſtament of the owner.

(2) This was not permitted by the common law, as it ſtood ſince the conqueſt; but was introduced by the ſtatute law, under Henry VIII. ſince made more univerſal by the ſtatute of tenures under Charles II. with the introduction of additional ſolemnities by the ſtatute of frauds and perjuries in the ſame reign.

(3.) The *conſtruction* of all *common aſſurances* ſhould be, 1. Agreeable to the intention. 2. To the words of the parties. 3. Made upon the entire deed. 4. Bearing ſtrongeſt againſt the contractor. 5. Conformable to law. 6. Rejecting the latter of two totally repugnant clauſes in the deed, and the former in a will. 7. Moſt favourable in caſe of a deviſe.

lxxxvi. SECT. XXIV. *Of things perſonal.*

(1.) THINGS *perſonal* are comprehended under the general name of *chattels;* which includes whatever wants either the duration, or the immobility, attending things real.

(2.) In theſe are to be conſidered, 1. Their *diſtribution*. 2. The *property* of them. 3. The *title* to that property.

(3.) As to the *diſtribution* of chattels, they are, 1. Chattels *real*. 2. Chattels *perſonal*.

(4.) Chattels *real* are ſuch quantities of intereſt, in things *immoveable*, as are ſhort of the duration of freeholds; being limited to a time certain, beyond which they cannot ſubſiſt. (See Sect. 7.)

(5.) Chattels *perſonal* are things *moveable;* which may be transferred from place to place, together with the perſon of the owner.

lxxxvii. SECT. XXV. *Of property in things perſonal.*

(1.) PROPERTY, in chattels perſonal, is either in *poſſeſſion*, or in *action*.

(2.) Property in *poſſeſſion*, where a man has the actual enjoyment of the thing, is, 1. *Abſolute*. 2. *Qualified*.

(3.) *Abſolute* property is where a man has ſuch an excluſive right in the thing, that it cannot ceaſe to be his, without his own act or default.

(4.) *Qualified* property is ſuch as is not, in its nature, permanent; but may ſometimes ſubſiſt, and at other times not ſubſiſt.

(5.) This may ariſe, 1. Where the ſubject is incapable of abſolute ownerſhip. 2. From the peculiar circumſtances of the owners.

(6.) Property in *action*, is where a man hath not the actual *occupation* of the thing; but only a *right* to it, ariſing upon ſome contract, and recoverable by an action at law.

(7.) The property of chattels perſonal is liable to remainders, expectant on eſtates for life; to joint-tenancy; and to tenancy in common.

lxxxviii. SECT. XXVI. *Of title to things perſonal by occupancy.*

(1.) THE *title* to things perſonal may be acquired or loſt by, 1. *Occupancy*. 2. *Prerogative*. 3. *Forfeiture*. 4. *Cuſtom*. 5. *Succeſſion*. 6. *Marriage*. 7. *Judgement*. 8. *Gift*, or *grant*. 9. *Contract*. 10. *Bankruptcy*. 11. *Teſtament*. 12. *Adminiſtration*.

(2.) Occupancy ſtill gives the firſt occupant a right to thoſe few things which have no legal owner, or which are incapable of permanent ownerſhip. Such as, 1. Goods of alien enemies. 2. Things found. 3. The benefit of the elements. 4. Animals *feræ naturæ*. 5. Emblements. 6. Things gained by acceſſion; or, 7. By confuſion. 8. Literary property.

lxxxix. SECT. XXVII. *Of title of prerogative, and forfeiture.*

(1.) BY *prerogative* is veſted in the crown, or its grantees, the property of the royal revenue, (ſee Chap. I. Sect. 8.); and alſo the property of all game in the kingdom, with the right of purſuing and taking it.

(2.) By *forfeiture*, for crimes and miſdemeanors, the right of goods and chattels may be transferred from one man to another; either in part or totally.

(3.) Total forfeitures of goods ariſe from conviction of, 1. Treaſon, and miſpriſion thereof. 2. Felony. 3. Excuſable homicide. 4. Outlawry for treaſon or felony. 5. Flight. 6. Standing mute. 7. Aſſaults on a judge: and batteries, ſitting the courts. 8. *Præmunire*. 9. Pretended prophecies. 10. Owling. 11. Reſiding abroad of artificers. 12. Challenges to fight, for debts at play.

xc. SECT. XXVIII. *Of title by cuſtom.*

(1.) By *cuſtom*, obtaining in particular places, a right may be acquired in chattels: the moſt uſual of which cuſtoms are thoſe relating to, 1. *Heriots*. 2. *Mortuaries*. 3. *Heir looms*.

(2.) *Heriots* are either heriot-*ſervice*, which differs little from a rent; or heriot-cuſtom, which is a cuſtomary tribute, of goods and chattels payable to the lord of the fee on the deceaſe of the owner of lands.

(3.) *Mortuaries* are a cuſtomary gift, due to the miniſter in many pariſhes, on the death of his pariſhioners.

(4.) *Heir-looms* are ſuch perſonal chattels, as deſcend by ſpecial cuſtom to the heir, along with the inheritance of his anceſtor.

xci. Sect. XXIX. *Of title by ſucceſſion, marriage, and judgment.*

(1.) By *ſucceſſion* the right of chattels is veſted in corporations *aggregate;* and likewiſe in ſuch corporations *ſole* as are the heads and repreſentatives of bodies aggregate.

(2.) By *marriage* the chattels real and perſonal of the wife are veſted in the huſband, in the ſame degree of property, and with the ſame powers, as the wife when ſole had over them; provided he reduces them to poſſeſſion.

(3.) The wife alſo acquires, by *marriage*, a property in her own *paraphernalia*.

(4). By *judgment*, conſequent on a ſuit at law, a man may in ſome caſes, not only *recover*, but originally *acquire*, a right to perſonal property. As, 1. To penalties recoverable by action popular. 2. To damages. 3. To coſts of ſuit.

xcii. Sect. XXX. *Of title by gift, grant, aud contract.*

(1.) A *gift*, or *grant*, is a voluntary conveyance of a chattel perſonal in poſſeſſion, without any conſideration or equivalent.

(2.) A *contract* is an agreement, upon ſufficient conſideration, to do or not to do a particular thing: and, by ſuch contract, any perſonal property (either in poſſeſſion or in action) may be transferred.

(3.) Contracts may either be expreſs or implied; either executed or executory.

(4.) The *conſideration* of contracts is, 1. A good conſideration. 2. A valuable conſideration; which is, 1. *Do ut des.* 2. *Facio ut facias.* 3. *Facio, ut des.* 4. *Do, ut facias.*

(5.) The moſt uſual *ſpecies* of perſonal contracts are, 1. *Sale* or *exchange.* 2. *Bailment.* 3. *Hiring* or *borrowing.* 4. *Debt.*

(6.) *Sale* or *exchange* is a tranſmutation of property from one man to another, in conſideration of ſome recompenſe in value.

(7.) *Bailment* is the delivery of goods in truſt; upon a contract, expreſs or implied, that the truſt ſhall be faithfully performed by the bailee.

(8.) *Hiring* or *borrowing* is a contract, whereby the poſſeſſion of chattels is transferred for a particular time, on condition that the identical goods (or ſometimes their value) be reſtored at the time appointed: together with (in caſe of *hiring)* a ſtipend or price for the uſe.

(9.) This price, being calculated to anſwer the hazard as well as inconvenience of lending, gives birth to the doctrine of *intereſt*, or *uſury*, upon loans; and, conſequently, to the doctrine of *bottomry* or *reſpondentia*, and *inſurance*.

(10.) *Debt* is any contract, whereby a certain ſum of *money* becomes due to the creditor. This is, 1. A debt of *record*. 2. A debt upon *ſpecial* contract. 3. A debt upon *ſimple* contract; which laſt includes paper credit, or bills of exchange, and promiſſory notes.

Sect. XXXI. *Of title by bankruptcy.*

(1.) Bankruptcy (as defined in Sect. 18.) is the act of becoming a bankrupt.

(2.) Herein may be conſidered, 1. Who may become a bankrupt. 2. The *acts* whereby he may become a bankrupt. 3. The *proceedings* on a commiſſion of bankrupt. 4. How his *property* is transferred thereby.

(3.) Perſons of full age, *uſing* the *trade* of merchandize, by buying, and ſelling, and ſeeking their livelihood thereby, are liable to become bankrupts; for debts of a ſufficient amount.

(4.) A trader, who endeavours to avoid his creditors, or evade their juſt demands, by any of the ways ſpecified in the ſeveral ſtatutes of bankruptcy, doth thereby commit an *act* of bankruptcy.

(5.) The *proceedings* on a commiſſion of bankrupt, ſo far as they affect the bankrupt himſelf, are principally by, 1. Petition. 2. Commiſſion. 3. Declaration of bankruptcy. 4. Choice of aſſignees. 5. The bankrupt's ſurrender. 6. His examination. 7. His diſcovery. 8. His certificate. 9. His allowance. 10. His indemnity.

(6.) the *property* of a bankrupt's perſonal eſtate is, immediately upon the act of bankruptcy, veſted by conſtruction of law in the aſſignees: and they, when they have collected, diſtribute the whole by equal dividends among all the creditors.

Sect. XXXII. *Of title by teſtament, and adminiſtration.* xciii.

(1.) Concerning *teſtaments* and *adminiſtrations*, conſidered jointly, are to be obſerved, 1. Their *original* and *antiquity*. 2. *Who* may make a teſtament. 3. Its *nature* and *incidents*. 4. What are *executors* and *adminiſtrators*. 5. Their *office* and *duty*.

(2.) *Teſtaments* have ſubſiſted in England immemorially; whereby the deceaſed was at liberty to diſpoſe of his perſonal eſtate, reſerving anciently to his wife and children their *reaſonable part* of his effects.

(3.) The goods of *inteſtates* belonged anciently to the king; who granted them to the prelates to be diſpoſed in pious uſes: but, on their abuſe of this truſt in the times of popery, the legiſlature compelled them to delegate their power to *adminiſtrators* expreſly provided by law.

(4.) *All* perſons may make a teſtament unleſs diſabled by, 1. Want of diſcretion. 2. Want of free-will. 3. Criminal conduct.

(5.) *Teſtaments* are the legal declaration of a man's intentions, which he wills to be performed after his death. Theſe are, 1. Written. 2. Nuncupative.

(6.) An *executor* is he, to whom a man by his will commits the execution thereof.

(7.) *Adminiſtrators* are, 1. *Durante minore ætate* of an infant executor or adminiſtrator; or *durante abſentia;* or *pendente lite.* 2. *Cum teſtamento annexo;* when no executor is named, or the executor refuſes to act. 3. General adminiſtrators; in purſuance of the ſtatutes of Edward III. and Henry VIII. 4. Adminiſtrator *de bonis non;* when a former executor or adminiſtrator dies without completing his truſt.

(8.) The *office* and *duty* of executors (and, in many points, of adminiſtrators alſo), are, 1. To bury the deceaſed. 2. To prove the will, or take out adminiſtration. 3. To make an inventory. 4. To collect the goods and chattels. 5. To pay debts; obſerving the rules of priority. 6. To pay legacies, either general or ſpecific; if they be veſted, and not lapſed. 7. To diſtribute the undeviſed ſurplus, according to the ſtatute of diſtributions.

CHAP. III.

Of PRIVATE WRONGS.

xcv. SECT. I. *Of the redreſs of private wrongs, by the mere act of the parties.*

(1.) WRONGS are the privation of *right*; and are, 1. *Private*. 2. *Public*.

(2.) *Private wrongs*, or *civil injuries*, are an infringement, or privation, of the civil rights of individuals, conſidered as individuals.

(3.) The *redreſs* of civil injuries is one principal object of the laws of England.

(4.) This *redreſs* is effected, 1. By the mere *act* of the parties. 2. By the mere *operation* of *law*. 3. By *both* together, or *ſuit* in *courts*.

(5.) *Redreſs*, by the mere *act* of the parties, is that which ariſes, 1. From the *ſole* act of the party injured. 2. From the *joint* act of all the parties.

(6.) Of the firſt ſort are, 1. Defence of one's ſelf, or relations. 2. Recaption of goods. 3. Entry on lands and tenements. 4. Abatement of nuſances. 5. Diſtreſs; for rent, for ſuit or ſervice, for amercements, for damage, or for divers ſtatutable penalties;—made of ſuch things only as are legally diſtrainable;—and taken and diſpoſed of according to the due courſe of law. 6. Seiſing of heriots, &c.

(7.) Of the ſecond ſort are, 1. Accord. 2. Arbitration.

xcvi. SECT. II. *Of redreſs by the mere operation of law.*

REDRESS, effected by the mere *operation* of *law*, is, 1. In the caſe of *retainer*; where a creditor is executor or adminiſtrator, and is thereupon allowed to retain his own debt. 2. In the caſe of *remitter*; where one, who has a *good* title to lands, &c. comes into poſſeſſion by a *bad* one, and is thereupon remitted to his ancient good title, which protects his ill-acquired poſſeſſion.

xcvii. SECT. III. *Of courts in general.*

(1.) REDRESS, that is effected by the *act* both of law and of the *parties*, is by *ſuit* or *action* in the *courts* of juſtice.

(2.) Herein may be conſidered, 1. The *courts* themſelves. 2. The *cognizance* of wrongs or injuries therein. And, of *courts*, 1. Their *nature* and *incidents*. 2. Their ſeveral *ſpecies*.

(3.) A *court* is a place wherein juſtice is judicially adminiſtered, by officers delegated by the crown; being a court either of record, or not of record.

(4.) *Incident* to all courts are a plaintiff, defendant, and judge: and, with us, there are alſo uſually attorneys; and advocates or counſel, *viz*. either barriſters or ſerjeants at law.

xcviii. SECT. IV. *Of the public courts of common law and equity.*

(1.) COURTS of juſtice, with regard to their ſeveral *ſpecies*, are, 1. Of a *public*, or general, juriſdiction throughout the realm. 2. Of a *private*, or ſpecial, juriſdiction.

(2.) *Public* courts of juſtice are, 1. The courts of *common law* and *equity*. 2. The *eccleſiaſtical* courts. 3. The *military* courts. 4. The *maritime* courts.

(3.) The general and public courts of *common law* and *equity* are, 1. The courts of piepoudre. 2. The court-baron. 3. The hundred court. 4. The county court. 5. The court of common pleas. 6. The court of king's bench. 7. The court of exchequer. 8. The court of chancery. (Which two laſt are courts of *equity* as well as *law*.) 9. The courts of exchequer-chamber. 10. The houſe of peers. To which may be added, as auxiliaries, 11. The courts of aſſize and *niſi prius*.

xcix. SECT. V. *Of courts eccleſiaſtical, military, and maritime.*

(1.) ECCLESIASTICAL courts (which were ſeparated from the *temporal* by William the Conqueror), or courts *Chriſtian*, are, 1. The court of the archdeacon. 2. The court of the biſhop's conſiſtory. 3. The court of arches. 4. The court of peculiars. 5. The prerogative court. 6. The court of delegates. 7. The court of review.

(2.) The only permanent *military* court is that of chivalry; the courts martial, annually eſtabliſhed by act of parliament, being only temporary.

(3.) *Maritime* courts are, 1. The court of admiralty and vice-admiralty. 2. The court of delegates. 3. The lords of the privy council, and others, authoriſed by the king's commiſſion, for appeals in prize-cauſes.

c. SECT. VI. *Of courts of a ſpecial juriſdiction.*

COURTS of a ſpecial or private juriſdiction are, 1. The foreſt courts, including the courts of attachments, regard, ſwinemote, and juſtice ſeat. 2. The court of commiſſioners of ſewers. 3. The court of policies of aſſurance. 4. The court of the marſhalſea and the palace court. 5. The courts of the principality of Wales. 6. The court of the duchy chamber of Lancaſter. 7. The courts of the counties palatine, and other royal franchiſes. 8. The ſtannary courts. 9. The courts of London, and other corporations:—To which may be referred the courts of requeſts or courts of conſcience; and the modern regulations of certain courts baron and county courts. 10. The courts of the two univerſities.

ci. SECT. VII. *Of the cogniſance of private wrongs.*

(1.) ALL private wrongs or civil injuries are *cogniſable* either in the courts *eccleſiaſtical*, *military*, *maritime*, or thoſe of *common law*.

(2.) Injuries cogniſable in the *eccleſiaſtical* courts are, 1. *Pecuniary.* 2. *Matrimonial.* 3. *Teſtamentary.*

(3.) *Pecuniary* injuries, here cogniſable, are, 1. *Subtraction* of *tithes.* For which the remedy is by ſuit to compel their payment, or an equivalent; and alſo their double value. 2. *Nonpayment* of eccleſiaſtical *dues.* Remedy: by ſuit for payment. 3. *Spoliation.* Remedy: by ſuit for reſtitution. 4. *Dilapidations.* Remedy: by ſuit for damages. 5. *Non-repair* of the church, &c.; and *non-payment* of church-rates. Remedy: by ſuit to compel them.

(4.) *Matrimonial* injuries are, 1. *Jactitation* of *marriage.* Remedy: by ſuit for perpetual ſilence. 2. *Subtraction* of *conjugal* rights. Remedy: by ſuit for reſtitution. 3. *Inability* for the marriage ſtate. Remedy: by ſuit for divorce. 4. *Refuſal* of decent *maintenance,* to the wife. Remedy: by ſuit for alimony.

(5.) *Teſtamentary* injuries are, 1. *Diſputing* the validity of *wills.* Remedy: by ſuit to eſtabliſh them. 3. *Obſtructing* of *adminiſtrations.* Remedy: by ſuit for the granting them. 3. *Subtraction* of *legacies.* Remedy: by ſuit for payment.

(6.) The courſe of proceedings herein is much conformed to the civil and canon law: but their only compulſive proceſs is that of excommunication; which is enforced by the temporal writ of *ſignificavit,* or *de excommunicato capiendo.*

(7.) Civil injuries, cogniſable in the court *military,* or court of chivalry, are, 1. Injuries in point of *honour.* Remedy: by ſuit for honourable amends. 2. *Encroachments* in *coat-armour,* &c. Remedy: by ſuit to remove them. The proceedings are a ſummary method.

(8.) Civil injuries cogniſable in the courts *maritime,* are injuries, in their nature of common law cogniſance, but ariſing wholly upon the ſea, and not within the precincts of any county. The proceedings are herein alſo much conformed to the civil law.

(9.) All other injuries are cogniſable only in the courts of *common law:* of which in the remainder of this chapter.

(10.) Two of them are, however, commiſſible by theſe and other inferior courts; *viz.* 1. *Refuſal,* or *neglect,* of *juſtice.* Remedies: by writ of *procedendo,* or *mandamus.* 2. *Encroachment* of *juriſdiction.* Remedy: by writ of prohibition.

cii. SECT. VIII. *Of wrongs, and their remedies, reſpecting the rights of perſons.*

(1.) IN treating of the cogniſance of injuries by the courts of *common* law, may be conſidered, 1. The *injuries* themſelves, and their reſpective *remedies.* 2. The *purſuit* of thoſe remedies in the ſeveral courts.

(2.) *Injuries* between ſubject and ſubject, cogniſable by the courts of *common* law, are in general *remedied* by putting the party injured into poſſeſſion of that right whereof he is unjuſtly deprived.

(3.) This is effected, 1. By *delivery* of the *thing* detained to the rightful owner. 2. Where that remedy is either impoſſible or inadequate, by giving the party injured a *ſatisfaction* in *damages.*

(4.) The inſtruments, by which theſe remedies may be obtained, are *ſuits* or *actions*; which are defined to be the legal demand of one's right: and theſe are, 1. Perſonal. 2. Real. 3. Mixed.

(5.) Injuries (whereof ſome are with, others without *force)* are 1. Injuries to the rights of *perſons.* 2. Injuries to the rights of *property.* And the former are, 1. Injuries to the *abſolute.* 2. Injuries to the *relative,* rights of perſons.

(6.) The *abſolute* rights of individuals are, 1. *Perſonal ſecurity.* 2. *Perſonal liberty.* 3. *Private property:* (See Chap. I. Sect. 1.). To which the injuries muſt be correſpondent.

(7.) Injuries to *perſonal ſecurity* are 1. Againſt a man's *life.* 2. Againſt his *limbs.* 3. Againſt his *body.* 4. Againſt his *health.* 5. Againſt his *reputation.*—The firſt muſt be referred to the next chapter.

(8.) Injuries to the *limbs* and *body,* are, 1. *Threats.* 2. *Aſſault.* 3. *Battery.* 4. *Wounding.* 5. *Mayhem.* Remedy: by action of treſpaſs, *vi et armis;* for damages.

(9.) Injuries to *health,* by any unwholeſome practices, are remedied by a ſpecial action of treſpaſs, on the caſe; for damages.

(10.) Injuries to *reputation* are, 1. Slanderous and malicious *words.* Remedy: by action on the caſe; for damages. 2. *Libels.* Remedy: the ſame. 3. Malicious *proſecutions.* Remedy: by action of conſpiracy, or on the caſe; for damages.

(11.) The ſole injury to *perſonal liberty* is *falſe impriſonment.* Remedies: 1. By writ of, 1ſt. Mainprize; 2dly, *Odio et atia;* 3dly, *Homine replegiando.* 4thly, *Habeas corpus;* to remove the wrong. 2. By action of treſpaſs; to recover damages.

(12.) For injuries to *private property,* ſee the next ſection.

(13.) Injuries to *relative* rights affect, 1. *Huſbands.* 2. *Parents.* 3. *Guardians.* 4. *Maſters.*

(14.) Injuries to an *huſband* are, 1. *Abduction,* or taking away his wife. Remedy: by action of treſpaſs, *de uxore rapta et abducta;* to recover poſſeſſion of his wife, and damages. 2. *Criminal converſation* with her. Remedy: by action on the caſe; for damages. 3. *Beating* her. Remedy: by action on the caſe, *per quod conſortium amiſit;* for damages.

(15.) The only injury to a *parent* or *guardian* is the *abduction* of their children or wards. Remedy: by action of treſpaſs, *de filiis, vel cuſtodiis, raptis vel abductis;* to recover poſſeſſion of them, and damages.

(16.) Injuries to a *maſter* are, 1. *Retaining* his ſervants. Remedy: by action on the caſe; for damages. 2. *Beating* them. Remedy: by action on the caſe, *per quod ſervitium amiſit;* for damages.

SECT. IX. *Of injuries to perſonal property.* ciii.

(1.) INJURIES to the rights of *property* are either to thoſe of *perſonal* or *real* property.

(2.) *Perſonal* property is either in *poſſeſſion* or in *action.*

(3.) Injuries to perſonal property in poſſeſſion are, 1. By *diſpoſſeſſion.* 2. By *damage,* while the owner remains in poſſeſſion.

(4.) *Diſpoſſeſſion,* may be effected, 1. By an unlawful *taking.* 2. By an unlawful *detaining.*

(5.) For the unlawful *taking* of goods and chattels perſonal, the remedy is, 1. Actual reſtitution, which (in caſe of a wrongful diſtreſs) is obtained by action of replevin. 3. Satiſfaction in damages: *1ſt*, in caſe of *reſcous*, by action of *reſcous*, poundbreach, or on the caſe; *2dly*, in caſe of other unlawful takings, by action of treſpaſs or trover.

(6.) For the unlawful *detaining* of goods lawfully taken, the remedy is alſo, 1. Actual reſtitution; by action of replevin or detinue. 2. Satiſfaction in damages: by action on the caſe, for trover and converſion.

(7.) For *damage* to perſonal property, while in the owner's poſſeſſion, the remedy is in damages; by action of treſpaſs *vi et armis*, in caſe the act be immediately injurious; or by action of treſpaſs on the caſe, to redreſs conſequential damage.

(8.) Injuries to perſonal property, in *action*, ariſe by breach of *contracts*, 1. *Expreſs*. 2. *Implied*.

(9.) Breaches of *expreſs* contracts are, 1. By *nonpayment* of *debts*. Remedy: *1ſt*, Specific payment; recoverable by action of debt. *2dly*, Damages for nonpayment; recoverable by action on the caſe. 2. By *nonperformance* of *covenants*. Remedy: by action of covenant, *1ſt*, to recover damages, in covenants perſonal; *2dly*, to compel performance, in covenants real. 3. By *nonperformance* of *promiſes*, or *aſſumpſits*. Remedy: by action on the caſe; for damages.

(10.) *Implied* contracts are ſuch as ariſe, 1. From the nature and conſtitution of *government*. 2. From *reaſon* and the conſtruction of law.

(11.) Breaches of contracts, implied, in the nature of *government*, are by the *nonpayment* of money which the laws have directed to be paid. Remedy: by action of debt (which, in ſuch caſes, is frequently a *popular*, frequently a *qui tam*, action); to compel the ſpecific payment;—or, ſometimes, by action on the caſe; for damages.

(12.) Breaches of contracts, implied in *reaſon* and conſtruction of law, are by the *nonperformance* of legal preſumptive *aſſumpſits*: for which the remedy is in damages; by an action on the caſe on the implied *aſſumpſits*, 1. Of a *quantum meruit*. 2. Of a *quantum valebat*. 3. Of money expended for another. 4. Of receiving money to another's uſe. 5. Of an *inſimul computaſſent*, on an account ſtated (the remedy on an account unſtated being by action of account). 6. Of performing one's duty, in any employment, with integrity, diligence, and ſkill. In ſome of which caſes an action of deceit (or on the caſe, in nature of deceit) will lie.

xiv. SECT. X. *Of injuries to real property: and, firſt, of diſpoſſeſſion, or ouſter, of the freehold.*

(1.) INJURIES affecting *real* property are, 1. *Ouſter*. 2. *Treſpaſs*. 3. *Nuſance*. 4. *Waſte*. 5. *Subtraction*. 6. *Diſturbance*.

(2.) *Ouſter* is the amotion of poſſeſſion; and is, 1. From *freeholds*. 2. From *chattels* real.

(3.) Ouſter from *freeholds* is effected by, 1. *Abatement*. 2. *Intruſion*. 3. *Diſſeiſin*. 4. *Diſcontinuance*. 5. *Deforcement*.

(4.) *Abatement* is the entry of a ſtranger, after the death of the anceſtor, before the heir.

(5.) *Intruſion* is the entry of a ſtranger, after a particular eſtate of freehold is determined, before him in remainder or reverſion.

(6.) *Diſſeiſin* is a wrongful putting out of him that is ſeiſed of the freehold.

(7.) *Diſcontinuance* is where tenant in tail, or or the huſband of tenant in fee, makes a larger eſtate of the land than the law alloweth.

(8.) *Deforcement* is any other detainer of the freehold from him who hath the property, but who never had the poſſeſſion.

(9.) The univerſal remedy for all theſe is reſtitution or delivery of poſſeſſion; and, ſometimes, damages for the detention. This is effected, 1. By mere *entry*. 2. By action *poſſeſſory*. 3. By writ of *right*.

(10.) Mere *entry*, on lands, by him who hath the apparent right of poſſeſſion, will (if *peaceable*) diveſt the mere *poſſeſſion* of a wrongdoer. But *forcible* entries are remedied by immediate reſtitution, to be given by a juſtice of the peace.

(11.) Where the wrongdoer hath not only mere poſſeſſion, but alſo an *apparent* right of poſſeſſion, this may be diveſted by him who hath the *actual* right of poſſeſſion, by means of the *poſſeſſory* actions of *writ* of *entry* or *aſſiſe*.

(12.) A writ of *entry* is a real action, which diſproves the title of the tenant, by ſhowing the unlawful means under which he gained or continues poſſeſſion. And it may be brought either againſt the wrongdoer himſelf, or in the degrees called the *per*, the *per* and *cui*, and the *poſt*.

(13.) An *aſſiſe* is a real action, which proves the title of the demandant, by ſhowing his own or his anceſtor's poſſeſſion. And it may be brought either to remedy abatements; *viz.* the aſſize of *mort d'anceſtor*, &c.; Or to remedy recent diſſeiſins; *viz.* the aſſize of *novel diſſeiſin*.

(14.) Where the wrongdoer hath gained the actual right of *poſſeſſion*, he who hath the right of *property* can only be remedied by a writ of *right*, or ſome writ of a ſimilar nature. As, 1. Where ſuch right of poſſeſſion is gained by the *diſcontinuance* of tenant in tail. Remedy, for the right of property: by writ of *formedon*. 2. Where gained by *recovery* in a poſſeſſory action, had againſt tenants of particular eſtates by their own default. Remedy: by writ of *quod ei deforceat*. 3. Where gained by *recovery* in a poſſeſſory action, had upon the merits. 4. Where gained by the *ſtatute* of *limitations*. Remedy, in both caſes: by a mere writ of *right*, the higheſt writ in the law.

SECT. XI. *Of diſpoſſeſſion, or ouſter, of chattels real.* xv.

(1.) OUSTER from *chattels* real is, 1. From eſtates by *ſtatute* and *elegit*. 2. From an eſtate for *years*.

(2.) Ouſter from eſtates by *ſtatute* or *elegit*, is effected by a kind of *diſſeiſin*. Remedy: reſtitution and damages; by aſſiſe of *novel diſſeiſin*.

(3.) Ouſter from an eſtate for years, is effected by a like diſſeiſin, or *ejectment*. Remedy: reſtitution, and damages; 1. By writ of *ejectione firmæ*. 2. By writ of *quare ejecit infra terminum*.

(4.) A writ of *ejectione firmæ*, or action of treſpaſs in ejectment, lieth where lands, &c. are let for a term of years, and the leſſee is ouſted or ejected from his term; in which caſe he ſhall recover poſſeſſion of his term, and damages.

(5.) This is now the uſual method of trying titles to land, inſtead of an action real: *viz.* By, 1. The claimant's making an actual (or ſuppoſed) leaſe upon the land to the plaintiff. 2. The plaintiff's actual (or ſuppoſed) entry thereupon. 3. His actual (or ſuppoſed) ouſter and ejectment by the defendant. For which injury this action is brought either againſt the tenant, or (more uſually) againſt ſome caſual or fictitious ejector; in whoſe ſtead the tenant may be admitted defendant, on condition that the leaſe, entry, and ouſter, be confeſſed, and that nothing elſe be diſputed but the merits of the title claimed by the leſſor of the plaintiff.

(6.) A writ of *quare ejecit infra terminum* is an action of a ſimilar nature; only not brought againſt the wrongdoer or ejector himſelf, but ſuch as are in poſſeſſion under his title.

cvi. Sect. XII. *Of treſpaſs.*

Treſpaſs is an entry upon, and damage done to, another's lands, by one's ſelf, or one's cattle; without any lawful authority, or cauſe of juſtification: which is called a *breach of his cloſe.* Remedy: damages; by action of treſpaſs, *quare clauſum fregit:* beſides that of diſtreſs, damage feaſant. But, unleſs the title to the land came chiefly in queſtion, or the treſpaſs was wilful or malicious, the plaintiff (if the damages be under forty ſhillings) ſhall recover no more coſts than damages.

cvii. Sect. XIII. *Of nuſance.*

(1.) Nuſance, or annoyance, is any thing that worketh damage or inconvenience: and it is either a *public* and *common* nuſance, of which in the next chapter; or, a *private* nuſance, which is any thing done to the hurt or annoyance of, 1. The corporeal; 2. The incorporeal, hereditaments of another.

(2.) The remedies for a private nuſance (beſides that of abatement) are. 1. Damages; by action on the caſe; (which alſo lies for ſpecial prejudice by a public nuſance). 2. Removal thereof, and damages; by aſſiſe of nuſance. 3. Like removal, and damages; by writ of *Quod permittat proſternere.*

cviii. Sect. XIV. *Of waſte.*

(1.) Waſte is a ſpoil and deſtruction in lands and tenements, to the injury of him who hath, 1. An immediate intereſt (as, by right of common) in the lands. 2. The remainder or reverſion of the inheritance.

(2.) The remedies, for a commoner, are reſtitution, and damages; by aſſiſe of common: Or, damages only; by action on the caſe.

(3.) The remedy, for him in remainder, or reverſion, is, 1. Preventive: by writ of *eſtrepement* at law, or injunction out of chancery; to ſtay waſte. 2. Corrective: by action of waſte; to recover the place waſted, and damages.

cix. Sect. XV. *Of ſubtraction.*

(1.) Subtraction is when one, who owes ſervices to another, withdraws or neglects to perform them. This may be, 1. Of rents, and other ſervices, due by *tenure.* 2. Of thoſe due by *cuſtom.*

(2.) For ſubtraction of rents and ſervices, due by *tenure,* the remedy is, 1. By diſtreſs; to compel the payment or performance. 2. By action of debt. 3. By aſſiſe. 4. By writ *de conſuetudinibus et ſervitiis;*—to compel the payment. 5. By writ of *ceſſavit;*—and, 6. By writ of right *ſur diſclaimer;*—to recover the land itſelf.

(3.) To remedy the oppreſſion of the lord, the law has alſo given, 1. The writ of *Ne injuſte vexes:* 2. The writ of *meſne.*

(4.) For ſubtraction of ſervices, due by *cuſtom,* the remedy is. 1. By writ of *Secta ad molendinum, furnum, torrale,* &c. to compel the performance, and recover damages. 2. By action on the caſe; for damages only.

cx. Sect. XVI. *Of diſturbance.*

(1.) Diſturbance is the hindering, or diſquieting, the owners of an incorporeal hereditament, in their regular and lawful enjoyment of it.

(2.) Diſturbances are, 1. Of *franchiſes.* 2. Of *commons.* 3. Of *ways.* 4. Of *tenure.* 5. Of *patronage.*

(3). Diſturbance of *franchiſes,* is remedied by a ſpecial action on the caſe; for damages.

(4.) Diſturbance of *common,* is, 1. *Intercommoning* without right. Remedy: Damages; by an action on the caſe, or of treſpaſs: beſides diſtreſs, damage feaſant; to compel ſatisfaction. 2. *Surcharging* the common. Remedies: diſtreſs, damage feaſant; to compel ſatisfaction: Action on the caſe; for damages: or, Writ of admeaſurement of paſture; to apportion the common; and writ *de ſecunda ſuperoneratione;* for the ſupernumerary cattle, and damages. 3. *Incloſure,* or obſtruction. Remedies: Reſtitution of the common, and damages; by aſſiſe of *novel diſſeiſin,* and by writ of *quod permittat:* or, Damages only; by action on the caſe.

(5.) Diſturbance of *ways,* is the obſtruction, 1. Of a way in groſs, by the owner of the land. 2. Of a way appendant, by a ſtranger. Remedy, for both: damages; by action on the caſe.

(6.) Diſturbance of *tenure,* by driving away tenants, is remedied by a ſpecial action on the caſe; for damages.

(7.) Diſturbance of *patronage,* is the hindrance of a patron to preſent his clerk to a benefice; whereof *uſurpation,* within ſix months, is now become a ſpecies.

(8.) Diſturbers may be, 1. The pſeudo-patron, by his wrongful preſentation. 2. His clerk, by demanding inſtitution. 3. The ordinary, by refuſing the clerk of the true patron.

(9.) The remedies are, 1. By aſſiſe of *darrein preſentment;* 2. By writ of *quare impedit;*—to compel inſtitution and recover damages: Conſequent to which are the writs of *quare incumbravit,* and *quare non admiſit;* for ſubſequent damages. 3. By writ of right of advowſon; to compel inſtitution, or eſtabliſh the permanent right.

cxi. SECT. XVII. *Of injuries proceeding from, or affecting, the crown.*

(1.) INJURIES to which the crown is a party are, 1. Where the crown is the aggreſſor. 2. Where the crown is the ſufferer.

(3.) The crown is the aggreſſor, whenever it is in poſſeſſion of any property to which the ſubject hath a right.

(3.) This is remedied, 1. By *petition* of *right*; where the right is grounded on facts diſcloſed in the petition itſelf. 2. By *monſtrans de droit*; where the claim is grounded on facts, already appearing on record. The effect of both which is to remove the hands (or poſſeſſion) of the king.

(4.) Where the crown is the ſufferer, the king's remedies are, 1. By ſuch common law actions as are conſiſtent with the royal dignity. 2. By *inqueſt* of *office*, to recover poſſeſſion: which, when found, gives the king his right by ſolemn matter of record; but may afterwards be *traverſed* by the ſubject. 3. By writ of *ſcire facias*, to repeal the king's patent or grant. 4. By *information* of *intruſion*, to give damages for any treſpaſs on the lands of the crown; or of *debt*, to recover moneys due upon contract, or forfeited by the breach of any penal ſtatute; or ſometimes (in the latter caſe) by information *in rem*: all filed in the exchequer *ex officio* by the king's attorney-general. 5. By writ of *quo warranto*, or information in the nature of ſuch writ; to ſeiſe into the king's hands any franchiſe uſurped by the ſubject, or to ouſt an uſurper from any public office. 6. By writ of *mandamus*, unleſs cauſe; to admit or reſtore any perſon intitled to a franchiſe or office: to which if a falſe cauſe be returned, the remedy is by traverſe, or by action on the caſe for damages; and, in conſequence, a peremptory *mandamus*, or writ of reſtitution.

cxii. SECT. XVIII. *Of the purſuit of remedies by action, and, firſt of the original writ.*

(1.) The *purſuit* of the ſeveral remedies furniſhed by the laws of England, is, 1. By *action* in the courts of *common law*. 2. By *proceedings* in the courts of *equity*.

(2.) Of an *action* in the court of *common pleas* (originally the proper court for proſecuting civil ſuits) the orderly parts are, 1. The *original* writ. 2. The *proceſs*. 3. The *pleadings*. 4. The *iſſue*, or *demurrer*. 5. The *trial*. 6. The *judgment*. 7. The proceedings in nature of *appeal*. 8. The *execution*.

(3.) The *original* writ is the beginning or foundation of a ſuit, and is either *optional* (called a *præcipe*), commanding the defendant to do ſomething in certain, or otherwiſe ſhow cauſe to the contrary; or *peremptory* called a *ſi te fecerit ſecurum*), commanding, upon ſecurity given by the plaintiff, the defendant to appear in court, to ſhow wherefore he hath injured the plaintiff: both iſſuing out of chancery under the king's great ſeal, and returnable in bank during term-time.

cxiii. SECT. XIX. *Of proceſs.*

(1.) PROCESS is the means of compelling the defendant to appear in court.

(2.) This includes, 1. Summons. 2. The writ of attachment, or *pone*; which is ſometimes the firſt or original proceſs. 3. The writ of *diſtringas*, or diſtreſs infinite. 4. The writs of *capias ad reſpondendum*, and *teſtatum capias*: or, inſtead of theſe, in the king's bench, the bill of Middleſex, and writ of *latitat*: and, in the exchequer, the writ of *quo minus*. 5. The *alias* and *pluries* writs. 6. The exigent, or writ of *exigi facias*, proclamations, and outlawry. 7. Appearance, and common bail. 8. The arreſt. 9. Special bail, firſt to the ſheriff, and then to the action

cxiv. SECT. XX. *Of pleadings.*

PLEADINGS are the mutual altercations of the plaintiff and defendant in writing; under which are compriſed, 1. The declaration or count; (wherein, incidentally, of the viſne, nonſuit, *retraxit*, and diſcontinuance). 2. The defence, claim of cognizance, imparlance, view, oyer, aid-prayer, voucher, or age; 3. The plea; which is either a *dilatory* plea (*1ſt*, to the juriſdiction; *2dly*, in diſability of the plaintiff; *3dly*, in abatement), or it is a plea *to the action*; ſometimes confeſſing the action either in whole or in part; (wherein of a tender, paying money into court, and ſet off): but uſually denying the complaint, by pleading either, *1ſt*, the general iſſue; or, *2dly*, a ſpecial bar (wherein of juſtifications, the ſtatutes of limitation, &c.). 4. Replication, rejoinder, ſurrejoinder, rebutter, ſurrebutter, &c. Therein of eſtoppels, colour, duplicity, departure, new aſſignment, proteſtation, averment, and other incidents of pleading.

cxv. SECT. XXI. *Of iſſue and demurrer.*

(1.) ISSUE is where the parties, in a courſe of pleading, come to a point affirmed on one ſide and denied on the other; which, if it be a matter of law, is called a *demurrer*; if it be a matter of fact, ſtill retains the name of an iſſue, of fact.

(2.) *Continuance* is the detaining of the parties in court from time to time, by giving them a day certain to appear upon. And, if any new matter ariſes ſince the laſt continuance or adjournment, the defendant may take advantage of it, even after demurrer or iſſue, by alleging it in a plea *puis darrein continuance*.

(3.) The determination of an iſſue in law, or demurrer, is by the opinion of the judges of the court; which is afterwards entered on *record*.

cxvi. SECT. XXII. *Of the ſeveral ſpecies of trial.*

(1.) TRIAL is the examination of the matter of fact put in iſſue.

(2.) The ſpecies of trials are, 1. By the *record*. 2. By *inſpection*. 3. By *certificate*. 4. By *witneſſes*. 5. By *wager* of *battel*. 6. By *wager* of *law*. 7. By *jury*.

(3.) Trial by the *record* is had when the exiſtence of ſuch record is the point in iſſue.

(4.) Trial by *inſpection* or *examination* is had by the court, principally when the matter in iſſue is the evident object of the ſenſes.

(5.) Trial by *certificate* is had in thoſe caſes, where ſuch certificate muſt have been concluſive to a jury.

(6.) Trial by *witneſſes* (the regular method in the civil law) is uſed only on a writ of dower, when the death of the huſband is in iſſue.

(7.) Trial by *wager* of *battel*, in civil caſes, is only had on a writ of right; but, in lieu thereof, the tenant may have, at his option, the trial by the *grand aſſiſe*.

(8.) Trial by *wager* of *law* is only had, where the matter in iſſue may be ſuppoſed to have been privily tranſacted between the parties themſelves, without the intervention of other witneſſes.

cxvii. SECT. XXIII. *Of the trial by jury.*

(1.) TRIAL by *jury* is, 1. *Extraordinary*; as, by the grand aſſize, in writs of right; and by the grand jury, in writs of attaint, 2. *Ordinary*.

(2.) The method and proceſs of the *ordinary* trial by jury is, 1. The writ of *venire facias* to the ſheriff, coroners, or eliſors; with the ſubſequent compulſive proceſs of *habeas corpora*, or *diſtringas*. 2. The carrying down of the record to the court of *niſi prius*. 3. The ſheriff's return; or panel of, 1ſt, ſpecial, 2dly, common jurors. 4. The challenges; 1ſt, to the array; 2dly, to the polls of the jurors; either, *propter honoris reſpectum, propter defectum, propter affectum* (which is ſometimes a principal challenge, ſometimes to the favour), or *propter delictum*. 5. The *tales de circumſtantibus*. 6. The oath of the jury. 7. The evidence; which is either by proofs, 1ſt, written; 2dly, parole:—or, by the private knowledge of the jurors. 6. The verdict; which may be, 1ſt, privy; 2dly, public, 3dly, ſpecial.

cxviii. SECT. XXIV. *Of judgment, and its incidents.*

(1.) WHATEVER is tranſacted at the trial, in the court of *niſi prius*, is added to the record, under the name of a *poſtea*: conſequent upon which is the *judgement*.

(2.) Judgment may be *arreſted* or ſtayed for cauſes, 1. Extrinſic, or *dehors* the record; as in the caſe of *new trials*. 2. Intrinſic, or within it; as where the declaration varies from the writ, or the verdict from the pleadings, and iſſue; or where the caſe, laid in the declaration, is not ſufficient to ſupport the action in point of law.

(3.) Where the iſſue is immaterial, or inſufficient, the court may award a *repleader*.

(4.) *Judgment* is the ſentence of the law, pronounced by the court, upon the matter contained in the record.

(5.) Judgments are, 1. Interlocutory; which are incomplete till perfected by a writ of inquiry. 2. Final.

(6.) *Coſts*, or expences of ſuit, are now the neceſſary conſequence of obtaining judgment.

cxix. SECT. XXV. *Of proceeding, in the nature of appeals.*

(1.) PROCEEDINGS, in the nature of *appeals* from judgment, are, 1. A writ of *attaint*; to impeach the verdict of a jury; which of late has been ſuperſeded by new trials. 2. A writ of *audita querela*; to diſcharge a judgment by matter that has ſince happened. 3. A writ of *error*, from one court of record to another; to correct judgments, erroneous in point of law, and not helped by the ſtatutes of amendment and jeofails.

(2.) Writs of error lie, 1. To the court of *king's bench*, from all inferior courts of record; from the court of *common-pleas* at Weſtminſter; and from the court of *king's-bench* in Ireland. 2. To the courts of *exchequer-chamber*, from the law ſide of the court of *exchequer*; and from proceedings in the court of *king's bench* by bill. 3. To the houſe of *peers*, from proceedings in the court of *king's-bench* by original, and on writs of error; and from the ſeveral courts *exchequer-chamber*.

cxx. SECT. XXVI. *Of execution.*

EXECUTION is the putting in force of the ſentence or judgement of the law. Which is effected, 1. Where poſſeſſion of any hereditament is recovered: by writ of *habere facias ſeiſinam, poſſeſſionem, &c.* 2. Where any thing is awarded to be done or rendered, by a ſpecial writ for that purpoſe: as, by writ of abatement, in caſe of nuſance; *retorna habendo*, and *capias in withernam*, in replevin; *diſtringas* and *ſcire facias*, in detinue. 3, Where money only is recovered; by writ of, 1ſt, *capias ad ſatisfaciendum*, againſt the *body* of the defendant; or, in default thereof, *ſcire facias* againſt his bail. 2dly, *Fieri facias*, againſt his *goods* and chattels. 3dly, *Levari facias*, againſt his *goods* and the *profits* of his lands. 4thly, *Elegit*, againſt his *goods*, and the *poſſeſſion* of his *lands*. 5thly, *Extendi facias*, and other proceſs, on ſtatutes, recognizances, &c. againſt his *body*, *lands*, and *goods*.

cxxi. SECT. XXVII. *Of proceedings in the courts of equity.*

(1.) MATTERS of equity which belong to the peculiar juriſdiction of the court of *chancery*, are, 1. the guardianſhip of infants. 2. The cuſtody of ideots and lunatics. 3. The ſuperintendants of charities. 5. Commiſſions of bankrupt.

(2.) The court of *exchequer* and the duchy-court of *Lancaſter*, have alſo ſome peculiar cauſes, in which the intereſt of the king is more immediately concerned.

(3.) *Equity* is the true ſenſe and ſound interpretation of the rules of law; and, as ſuch, is equally attended to by the judges of the courts both of common law and equity.

(4.) The eſſential differences, whereby the Engliſh courts of equity are diſtinguiſhed from the courts of law, are, 1. The mode of *proof*, by a diſcovery on the oath of the party; which gives a juriſdiction in matters of account, and fraud. 2. The mode of *trial*; by depoſitions taken in any part of the world. 3. The mode of *relief*; by giving a more ſpecific and extenſive remedy than can be had in the courts of law; as, by carrying agreements into execution, ſtaying waſte or other injuries by injunction, directing the ſale of incumbered lands, &c. 4. The true conſtruction of *ſecurities* for money, by conſidering them merely as a pledge. 5. The execution of *truſts*, or ſecond uſes, in a manner analogous to the law of legal eſtates.

(5.) The proceedings in the court of chancery (to which thoſe in the exchequer, &c. very nearly conform) are, 1. Bill. 2. Writ of *ſubpœna*; and, perhaps, injunction. 3. Proceſs of contempt; viz. (ordinarily) attachment, attachment with proclamations, commiſſion of rebellion, ſerjeant at arms, and ſequeſtrations. 4. Appearance. 5. Demurrer. 6. Plea. 7. Anſwer. 8. Exceptions; amendments; croſs, or ſupplemental, bills; bills of revivor, interpleader, &c. 9. Replication. 10. Iſſue. 11. Depoſitions, taken upon interrogatories; and ſubſequent publication thereof. 12. Hearing. 13. Interlocutory decree; feigned iſſue, and trial; reference to the maſter, and report; &c. 14. Final decree. 15. Rehearing, or bill of review, 16. Appeal to parliament.

CHAP. IV.

Of PUBLIC WRONGS.

cxxiii. SECT. I. *Of the nature of crimes, and their puniſhment.*

(1.) IN treating of *public wrongs* may be conſidered, 1. The general *nature* of crimes and puniſhments. 2 The perſons *capable* of committing crimes, 3. Their ſeveral *degrees* of guilt. 4. The ſeveral *ſpecies* of crimes, and their reſpective puniſhments. 5. The means of *prevention*. 6. The method of *puniſhment*.

(2.) A *crime*, or *miſdemeanor*, is an act committed, or omitted, in violation of a public law either forbidding or commanding it.

(3.) Crimes are diſtinguiſhed from civil injuries, in that they are a breach and violation of the *public* rights, due to the whole community, conſidered as a community.

(4.) *Puniſhments* may be conſidered with regard to, 1. The *power*; 2. The *end*; 3. The *meaſure*;—of their infliction.

(5.) the *power*, or right, of inflicting human puniſhments for *natural* crimes, or ſuch as are *mala in ſe*, was by the law of nature veſted in every individual: but, by the fundamental contract of ſociety, is now transferred to the ſovereign power; in which alſo is veſted, by the ſame contract, the right of puniſhing *poſitive* offences, or ſuch as are *mala prohibita*.

(6.) The *end* of human puniſhments is to prevent future offences; 1. By amending the offender himſelf. 2. By deterring others through his example. 3. By depriving him of the power to do future miſchief.

(7.) The *meaſure* of human puniſhments muſt be determined by the wiſdom of the ſovereign power, and not by any uniform univerſal rule: though that wiſdom may be regulated, and aſſiſted, by certain general, equitable, principles.

cxxiv. SECT. II. *Of the perſons capable of committing crimes.*

(1.) ALL perſons are *capable* of committing crimes, unleſs there be in them a *defect* of *will*: for, to conſtitute a legal crime, there muſt be both a vitious will, and a vitious act.

(2.) The will does not concur with the act, 1. Where there is a defect of *underſtanding*. 2. Where no will is *exerted*. 3. Where the act is *conſtrained* by force and violence.

(3.) A vitious will may therefore be wanting, in the caſes of, 1. Infancy. 2. Idiocy, or lunacy. 3. Drunkenneſs; which doth not, however, excuſe. 4. Misfortune. 5. Ignorance, or miſtake of fact. 6. Compulſion, or neceſſity; which is, 1ſt, that of civil ſubjection; 2dly, that of dureſs *per minas*; 3dly, that of chooſing the leaſt pernicious of two evils, where one is unavoidable; 4thly, that of want, or hunger; which is no legitimate excuſe.

(4.) the king, from his excellence and dignity, is alſo incapable of doing wrong.

cxxv. SECT. III. *Of principles and acceſſories.*

(1.) THE different *degrees* of guilt in criminals are, 1. As *principals*. 2. As *acceſſories*.

(2.) A *principal* in a crime is, 1. He who commits the fact. 2. He who is preſent at, aiding, and abetting, the commiſſion.

(3.) An *acceſſory* is he who doth not commit the fact, nor is preſent at the commiſſion; but is in ſome ſort concerned therein, either *before* or *after*.

(4.) Acceſſories can only be in petit treaſon, and felony: in high treaſon, and miſdemeanors, all are principals.

(5.) An acceſſory, *before* the fact, is one who, being abſent when the crime is committed, hath procured, counſelled, or commanded, another to commit it.

(6.) An acceſſory *after* the fact, is where a perſon, knowing a felony to have been committed, receives, relieves, comforts, or aſſiſts, the felon. Such acceſſory is uſually intitled to the benefit of clergy; where the principal, and acceſſory *before* the fact, are excluded from it.

cxxvi SECT. IV. *Of offences againſt* GOD *and religion.*

(1.) CRIMES and miſdemeanors cognizable by the laws of England are ſuch as more immediately offend, 1. GOD, and his holy *religion*. 2. The law of *nations*. 3. The *king*, and his *government*. 4. The *public*, or *commonwealth*. 5. *Individuals*.

(2.) Crimes more immediately offending GOD and *religion* are, 1. *Apoſtacy*. For which the penalty is incapacity, and impriſonment. 2. *Hereſy*. Penalty, for one ſpecies thereof: the ſame. 3. Offences againſt the eſtabliſhed *church*:—Either, by *reviling* its ordinances. Penalties: fine; deprivation; impriſonment; forfeiture.—Or, by *nonconformity* to its worſhip; 1ſt, Thro' total *irreligion*. Penalty: fine. 2dly, Thro' proteſtant *diſſenting*. Penalty: ſuſpended by the toleration act. 3dly, through *popery*, either in profeſſors of the popiſh religion, popiſh recuſants, convict, or popiſh prieſts. Penalties incapacity; double taxes; impriſonment; fines; forfeitures; abjuration of the realm; judgment of felony, without clergy and judgment of high treaſon. 4. *Blaſphemy*. Penalty: fine, impriſonment, and corporal puniſhment. 5. Profane, *ſwearing* and *curſing*. Penalty: fine, or houſe of correction. 6. *Witchcraft*; or, at leaſt, the pretence thereto. Penalty: impriſonment, and pillory. 7. Religious *impoſtures*. Penalty: fine, impriſonment, and corporal puniſhment. 8. *Simony.* Penalties: forfeiture of doubt value; incapacity. 9. *Sabbath-breaking.* Penalty: fine. 10. *Drunkenneſs.* Penalty: fine, or ſtocks. 11. *Lewdneſs.* Penalties: fine; impriſonment; houſe of correction.

Sect. V. *Of offences againſt the law of nations.*

(1.) The *law* of *nations* is a ſyſtem of rules, deducible by natural reaſon, and eſtabliſhed by univerſal conſent, to regulate the intercourſe between independent ſtates.

(2.) In England, the *law* of *nations* is adopted in its full extent, as part of the law of the land.

(3.) Offences againſt this law are principally incident to whole ſtates or nations; but, when committed by private ſubjects, are then the objects of the municipal law.

(4.) Crimes againſt the law of *nations*, animadverted on by the laws of England, are, 1. Violation of *ſafe-conducts.* 2. Infringement of the rights of *embaſſadors*, Penalty, in both: arbitrary. 3. *Piracy.* Penalty: judgment of felony, without clergy.

Sect. VI. *Of high treaſon.* cxxviii.

(1.) Crimes and miſdemeanors more peculiarly offending the king and his government are, 1. *High treaſon.* 2. *Felonies* injurious to the prerogative. 3. *Præmunire.* 4. Other *miſpriſions* and *contempts.*

(2.) *High treaſon* may, according to the ſtatute of Edward III. be committed, 1. By *compaſſing* or *imagining* the death of the king, or queen-conſort, or their eldeſt ſon and heir; demonſtrated by ſome overt act. 2. By *violating* the king's companion, his eldeſt daughter, or the wife of his eldeſt ſon. 3. By ſome overt act of *levying* war againſt the king in his realm. 4. By *adherence* to the king's enemies. 5. By *counterfeiting* the king's great or privy *ſeal.* 6. By *counterfeiting* the king's *money*, or importing counterfeit money. 7 By *killing* the chancellor, treaſurer, or king's juſtices, in the execution of their offices.

(3.) *High treaſons*, created by ſubſequent ſtatutes, are ſuch as relate, 1. To *papiſts:* as, the repeated defence of the pope's juriſdiction; the coming from beyond ſea of a natural-born popiſh prieſt; the renouncing of allegiance, and reconciliation to the pope or other foreign power. 2. To the *coinage*, or other ſignatures of the king: as, counterfeiting (or, importing and uttering counterfeit) foreign coin, here current; forging the ſign manual, privy ſignet, or privy ſeal; falſifying, &c. the current coin. 3. To the *proteſtant ſucceſſion:* as, correſponding with, or remitting to, the late Pretender's ſons; endeavouring to impede the ſucceſſion; writing or printing, in defence of any Pretender's title, or in derogation of the act of ſettlement, or of the power of parliament to limit the deſcent of the crown.

(4.) The *puniſhment* of high treaſon, in *males*, is (generally) to be, 1. Drawn. 2. Hanged. 3. Embowelled alive. 4. Beheaded. 5. Quartered. 6. The head and quarters to be at the king's diſpoſal. But, in treaſons relating to the coin, only to be drawn, and hanged till dead. *Females*, in both caſes, are to be drawn, and burned alive

Sect. VII. *Of felonies injurious to the king's prerogative.*

(1.) Felony is that offence which occaſions the total forfeiture of lands or goods at common law; now uſually alſo puniſhable with death, by hanging; unleſs through the benefit of clergy.

(2.) *Felonies* injurious to the king's prerogative (of which ſome are within, others without, clergy) are, 1. Such as relate to the *coin:* as, the wilful uttering of counterfeit money, &c.; (to which head ſome inferior miſdemeanors affecting the coinage may be alſo referred). 2. Conſpiring or attempting to kill a *privy counſellor.* 3. Serving *foreign* ſtates, or enliſting ſoldiers for *foreign* ſervice. 4. Embezzling the king's *armour* or *ſtores.* 5. *Deſertion* from the king's *armies*, by land or ſea.

Sect. VIII. *Of præmunire.* cxxv.

(1.) Præmunire, in its original ſenſe, is the offence of adhering to the temporal power of the Pope, in derogation of the regal authority. Penalty: outlawry, forfeiture, and impriſonment: which hath ſince been extended to ſome offences of a different nature.

(2.) Among theſe are, 1. Importing Popiſh trinkets. 2. Contributing to the maintenance of Popiſh ſeminaries abroad, or Popiſh prieſts in England. 3. Moleſting the poſſeſſors of abbey-lands. 4. Acting as broker in an uſurious contract, for more than ten *per cent.* 5. Obtaining any ſtay of proceedings in ſuits for monopolies. 6. Obtaining an excluſive patent for gunpowder or arms. 7. Exertion of purveyance or pre-emption. 8. Aſſerting a legiſlative authority in both or either houſe of parliament. 9. Sending any ſubject a priſoner beyond ſea. 10. Refuſing the oaths of allegiance and ſupremacy. 11. Preaching, teaching, or adviſed ſpeaking, in defence of the right of any pretender to the crown, or in derogation of the power of parliament to limit the ſucceſſion. 12. Treating of other matters by the aſſembly of peers of Scotland, convened for electing their repreſentatives in parliament. 15. Unwarrantable undertakings by unlawful ſubſcriptions to public funds.

Sect. IX. *Of miſpriſions and contempts affecting the king and government.* cxxvi.

(1.) Miſpriſons and *contempts* are all ſuch high offences as are under the degree of capital.

(2.) Theſe are, 1. *Negative*, in concealing what ought to be revealed. 2. *Poſitive*, in committing what ought not to be done.

(3.) *Negative* miſpriſions are, 1. Miſpriſion of *treaſon.* Penalty: forfeiture and impriſonment. 2. Miſpriſon of *felony.* Penalty: fine and impriſonment. 3. Concealment of *treaſure trove.* Penalty: fine and impriſonment.

(4.) *Poſitive* miſpriſions or high miſdemeanors and contempts, are, 1. *Mal-adminiſtration* of public truſts, which includes the crime of *peculation.* Uſual penalties: baniſhment: fines; impriſonment; diſability. 2. Contempts againſt the king's *prerogative.* Penalty: fine, and impriſonment. 3. Contempt againſt his *perſon* and *government*. Penalty: fine, impriſonment, and infamous corporal puniſhment. 4. Contempts againſt his *title*. Penalties: fine, and impriſonment; or fine, and diſability. 5. Contempts againſt his *palaces*, or *courts* of juſtice. Penalties: fine, impriſonment; corporal puniſhment; loſs of right hand; forfeiture.

cxxxii. Sect. X. *Of offences againſt public juſtice.*

(1.) Crimes eſpecially affecting the *commonwealth* are offences, 1. Againſt the public *juſtice*. 2. Againſt the public *peace*. 3. Againſt the public *trade*. 4. Againſt the public *health*. 5. Againſt the public *police* or *economy*.

(2.) Offences againſt the public *juſtice*, are, 1. *Embezzling* or *vacating* records, and *perſonating* others in courts of juſtice. Penalty: judgment of felony, uſually without clergy. 2. *Compelling* priſoners to become *approvers*. Penalty: judgment of felony. 3. *Obſtructing* the execution of proceſs. 4. *Eſcapes*. 5. *Breach* of priſon. 6. *Reſcue*. Which four may (according to the circumſtances) be either felonies, or miſdemeanors puniſhable by fine and impriſonment. 7. *Returning* from *tranſportation*. This is felony, without clergy. 8. Taking *rewards* to *help* one to his ſtolen goods. Penalty: the ſame as for the theft. 9. *Receiving* ſtolen goods. Penalties: tranſportation; fine; and impriſonment.—10. *Theftbote*: 11. Common *barretry* and ſuing in a feigned name. 12. *Maintenance*. 13. *Champerty*. Penalty, in theſe four: fine, and impriſonment. 14. *Compounding* proſecutions on penal ſtatutes. Penalty: fine, pillory, and diſability. 15. *Conſpiracy*; and threats of accuſation in order to extort money, &c. Penalties: the villenous judgment; fine; impriſonment; pillory; whipping; tranſportation. 16. *Perjury*, and ſubornation thereof. Penalties: infamy; impriſonment; fine, or pillory; and, ſometimes, tranſportation or houſe of correction. 17. *Bribery*. Penalty: fine, and impriſonment. 18. *Embracery*. Penalty: infamy, fine, and impriſonment. 19. *Falſe verdict*. Penalty: the judgment in attaint. 20. *Negligence* of public officers, &c. Penalty: fine, and forfeiture of the office. 21. *Oppreſſion* by magiſtrates. 22. *Extortion* of officers. Penalty, in both: impriſonment, fine, and ſometimes forfeiture of the office.

cxxxiii. Sect. XI. *Of offences againſt the public peace.*

Offences againſt the public *peace* are, 1. *Riotous aſſemblies* to the number of *twelve*. 2. Appearing armed, or hunting in *diſguiſe*. 3. *Threatening* or *demanding* any valuable thing, by letter.—All theſe are felonies, without clergy. 4. Deſtroying of *turnpikes*, &c. Penalties: whipping; impriſonment; judgement of felony, with and without clergy.—5. *Affrays*. 6. *Riots*, *routs*, and *unlawful aſſemblies*. 7. Tumultuous *petitioning*. 8. Forcible *entry*, and *detainer*. Penalty, in all four: fine, and impriſonment. 9. Going unuſually *armed*. Penalty: forfeiture of arms, and impriſonment. 10. Spreading *falſe news*. Penalty: fine, and impriſonment. 11. Pretended *prophecies*. Penalties: fine; impriſonment; and forfeiture. 12. *Challenges* to fight. Penalty: fine, impriſonment, and ſometimes forfeiture. 13. *Libels*. Penalty: fine, impriſonment, and corporal puniſhment.

cxxxiv. Sect. XII. *Of offences againſt public trade.*

Offences againſt the public *trade*, are, 1. *Owling*. Penalties: fines; forfeiture; impriſonment; loſs of left hand; tranſportation; judgment of felony. 2. *Smuggling*. Penalties: fines; loſs of goods; judgment of felony, without clergy. 3. *Fraudulent bankruptcy*. Penalty: judgment of felony without clergy. 5. *Uſury*. Penalty: fine, and impriſonment. 5. *Cheating*. Penalties: fine; impriſonment; pillory; tumbril; whipping, or other corporal puniſhment, tranſportation.—6. *Foreſtalling*. 7. *Regrating*. 8. *Engroſſing*. Penalties, for all three; loſs of goods; fine; impriſonment; pillory. 9. *Monopolies*, and *combinations* to raiſe the price of commodities. Penalties: fines; impriſonment; pillory; loſs of ear; infamy; and, ſometimes, the pains of *præmunire*. 10. Exerciſing a *trade*, not having ſerved as an apprentice. Penalty: fine. 11. Tranſporting, or reſiding abroad, of *artificers*. Penalties: fine; impriſonment; forfeiture; incapacity; becoming aliens.

cxxxv. Sect. XIII. *Of offences againſt the public health, and public police or economy.*

(1.) Offences againſt the public *health*, are, 1. *Irregularity*, in the time of the *plague*, or of *quarantine*. Penalties: whipping; judgment of felony, with and without clergy. 2. Selling *unwholeſome proviſions*. Penalties: amercement; pillory; fine; impriſonment; abjuration of the town.

(2.) Offences againſt the public *police* and *economy* or domeſtic order of the kingdom, are, 1. Thoſe relating to *clandeſtine* and *irregular marriages*. Penalties: judgment of felony, with and without clergy. 2. *Bigamy*, or (more properly) *polygamy*. Penalty: judgment of felony.—3. *Wandering*, by *ſoldiers* or *mariners*. 4. *Remaining* in England, by *Egyptians*; or being in their *fellowſhip* one month. Both theſe are felonies, without clergy. 5. *Common nuiſances*, *1ſt*, by annoyances or purpreſtures in highways, bridges, and rivers; *2dly*, by offenſive trades and manufactures: *3dly*, by diſorderly houſes; *4thly*, by lotteries; *5thly*, by cottages; *6thly*, by fireworks; *7thy*, by eveſdropping. Penalty, in all; fine.—*8thy*, By common ſcolding. Penalty: the cucking ſtool. 6. *Idleneſs*, *diſorder*, *vagrancy*, and *incorrigible roguery*. Penalties: impriſonment; whipping; judgment of felony. 7. *Luxury*, in diet. Penalty, diſcretionary. 8. *Gaming*. Penalties: to gentlemen, fines; to others, fine and impriſonment: to cheating gameſters, fine, infamy, and the corporal pains of perjury. 9. *Deſtroying* the *game*. Penalties: fines, and corporal puniſhment.

cxxxvi. Sect. XIV. *Of homicide.*

(1.) Crimes eſpecially affecting *individuals* are, 1. Againſt their *perſons*. 2. Againſt their *habitations*. 3. Againſt their *property*.

(2.) Crimes againſt the *perſons* of individuals, are, 1. By *homicide*, or deſtroying life. 2. By other *corporal* injuries.

(3.) *Homicide* is, 1. *Juſtifiable.* 2. *Excuſable.* 3. *Felonious.*

(4.) Homicide is *juſtifiable*, 1. By neceſſity, and command of law. 2. By permiſſion of law; 1*ſt*, for the furtherance of public juſtice; 2*dly*, for prevention of ſome forcible felony.

(5.) Homicide is *excuſable.* 1. *Per infortunium*, or by miſ-adventure. 2. *Se defendendo*, or in ſelf-defence, by chance-medley. Penalty, in both: forfeiture of goods: which however is pardoned of courſe.

(6.) *Felonious* homicide is the killing of a human creature without juſtification or excuſe. This is, 1. Killing *one's ſelf.* 2. Killing *another.*

(7.) Killing *one's ſelf*, or *ſelf-murder*, is where one deliberately, or by any unlawful malicious act, puts an end to his own life. This is felony; puniſhed by ignominious burial, and forfeiture of goods and chattels.

(8.) Killing *another* is, 1. *Manſlaughter.* 2. *Murder.*

(9.) *Manſlaughter* is the unlawful killing of another, without malice, expreſs or implied. This is either, 1. Voluntary, upon a ſudden heat. 2. Involuntary, in the commiſſion of ſome unlawful act. Both are felony, but within clergy; except in the caſe of *ſtabbing.*

(10.) *Murder* is when a perſon, of ſound memory and diſcretion, unlawfully killeth any reaſonable creature, in being, and under the king's peace; with malice aforethought, either expreſs or implied. This is felony, without clergy; puniſhed with ſpeedy death, and hanging in chains, or diſſection.

(11.) *Petit treaſon* (being an aggravated degree of *murder*) is where the ſervant kills his maſter, the wife her huſband, or the eccleſiaſtic his ſuperior. Penalty: in men, to be drawn and hanged; in women, to be drawn and burned.

cxxxvii. SECT. XV. *Of offences againſt the perſons of individuals.*

CRIMES affecting the *perſons* of individuals, by other corporal injuries not amounting to homicide, are, 1. *Mayhem;* and alſo *ſhooting* at another. Penalties: fine; impriſonment; judgment of felony, without clergy. 2. Forcible *abduction*, and *marriage* or *defilement*, of an heireſs; which is felony: alſo, *ſtealing*, and *deflowering* or *marrying*, any woman-child under the age of *ſixteen* years; for which the penalty is impriſonment, fine, and temporary forfeiture of her lands.—3. *Rape*, and alſo *carnal knowledge*, of a woman-child under the age of *ten* years. 4. *Buggery*, with man or beaſt. Both theſe are felonies, without clergy.—5. *Aſſault.* 6. *Battery*; eſpecially of clergymen. 7. *Wounding.* Penalties, in all three: fine; impriſonment; and other corporal puniſhment. 8. *Falſe impriſonment.* Penalties: fine; impriſonment; and (in ſome atrocious caſes) the pains of *præmunire*, and incapacity of office or pardon. 9. *Kidnapping*, or forcibly ſtealing away the king's ſubjects. Penalty: fine; impriſonment; and pillory.

cxxxviii. SECT. XVI. *Of offences againſt the habitations of individuals.*

(1.) CRIMES, affecting the *habitations* of individuals are, 1. *Arſon.* 2. *Burglary.*

(2.) *Arſon* is the malicious and wilful burning of the houſe, or out-houſe, of another man. This is felony; in ſome caſes within, in others without, clergy.

(3.) *Burglary* is the breaking and entering, by night into a manſion-houſe; with intent to commit a felony. This is felony, without clergy.

SECT. XVII. *Of offences againſt private property.* cxxxix.

(1.) CRIMES affecting the private *property* of individuals are, 1. *Larceny.* 2. Malicious *Miſchief.* 3. *Forgery.*

(2.) *Larceny* is, 1. *Simple.* 2. *Mixed* or *compound.*

(3.) *Simple* larceny is the felonious taking, and carrying away, of the perſonal goods of another. And it is, 1. *Grand* larceny; being above the value of twelve pence. Which is felony; in ſome caſes, within, in others without, clergy. 2. *Petit* larceny; to the value of twelve pence or under. Which is alſo felony, but not capital; being puniſhed with whipping, or tranſportation.

(4.) *Mixed* or *compound* larceny, is that wherein the taking is accompanied with the aggravation of being, 1. From the *houſe.* 2. From the *perſon.*

(5.) Larcenies from the *houſe*, by day or night, are felonies without clergy, when they are, 1. Larcenies, above *twelve pence*, from a church; or by breaking a tent or booth in a market or fair, by day or night, the owner or his family being therein;—or by breaking a dwelling-houſe by day, any perſon being therein;—or from a dwelling-houſe by day, without breaking, any perſon therein being put in fear;—or from a dwelling-houſe by night, without breaking, the owner, or his family being therein and put in fear. 2. Larcenies, of *five ſhillings*, by breaking the dwelling-houſe, ſhop, or warehouſe by day, though no perſon be therein;—or, by privately ſtealing in any ſhop, warehouſe, coach-houſe, or ſtable, by day or night, without breaking, and though no perſon be therein. 3. Larcenies, of *forty ſhillings*, from a dwelling-houſe or its out-houſes, without breaking, and though no perſon be therein.

(6.) Larceny from the *perſon* is, 1. By *privately ſtealing*, from the perſon of another, above the value of twelve pence. 2. By *robbery;* or the felonious and forcible taking, from the perſon of another, in or near the highway, goods or money of any value, by putting him in fear. Theſe are both felonies without clergy. An attempt to rob is alſo felony.

(7.) Malicious *miſchief*, by deſtroying dikes, goods, cattle, ſhips, garments, fiſh-ponds, trees, woods, churches, chapels, meeting-houſes, houſes, out houſes, corn, hay, ſtraw, ſea or river banks, hop-binds, coal-mines (or engines thereunto belonging), or any fences for incloſures by act of parliament, is felony; and, in moſt caſes, without benefit of clergy.

(8.) *Forgery* is the fraudulent making or alteration of a writing, in prejudice of another's right. Penalties: fine; impriſonment; pillory; loſs of noſe and ears; forfeiture; judgment of felony, without clergy.

cxl. Sect. XVIII. *Of the means of preventing offences.*

(1.) Crimes and miſdemeanors may be *prevented*, by compelling ſuſpected perſons to give *ſecurity*; which is effected by binding them in a conditional recognizance to the king, taken in court, or by a magiſtrate.

(2.) Theſe recognizances may be conditioned, 1. To keep the *peace*. 2. To be of *good behaviour*.

(3.) They may be taken by any juſtice or conſervator of the peace, at his own diſcretion; or, at the requeſt of ſuch as are intitled to demand the ſame.

(4.) All perſons, who have given ſufficient cauſe to apprehend an intended breach of the peace, may be bound over to keep the *peace*; and all thoſe, that be not of good fame, may be bound to the *good behaviour*; and may, upon refuſal in either caſe, be committed to gaol.

cxli. Sect. XIX. *Of courts of criminal juriſdiction.*

(1.) In the method of *puniſhment* may be conſidered, 1. The ſeveral *courts* of criminal juriſdiction. 2. The ſeveral *proceedings* therein.

(2.) The criminal *courts* are, 1. Thoſe of a *public* and general juriſdiction throughout the realm. 2. Thoſe of a *private* and ſpecial juriſdiction.

(3.) *Public* criminal courts are, 1. The high court of parliament; which proceeds by impeachment. 2. The court of the lord high ſteward; and the oourt of the king in full parliament: for the trial of capitally indicted peers. 3. The court of king's bench. 4. The court of chivalry. 5. The court of admiralty, under the king's commiſſion. 6. The courts of oyer and terminer, and general gaol-delivery. 7. The court of quarter-ſeſſions of the peace. 8. The ſheriff's tourn. 9. The court leet. 10. The court of the coroner. 11. The court of the clerk of the market.

(4.) *Private* criminal courts are, 1. The court of the lord ſteward, &c. by ſtatute of Henry VII. 2. The court of the lord ſteward, &c. by ſtatute of Henry VIII. 3. The univerſity courts.

cxlii. Sect. XX. *Of ſummary convictions.*

(1.) Proceedings in criminal courts are, 1. *Summary*. 2. *Regular*.

(2.) *Summary* proceedings are ſuch, whereby a man may be convicted of divers offences, without any formal proceſs or jury, at the diſcretion of the judge or judges appointed by act of parliament, or common law.

(3.) Such are, 1. Trials of offences and frauds againſt the laws of *exciſe* and other branches of the king's *revenue*. 2. Convictions before *juſtices* of the *peace* upon a variety of minute offences, chiefly againſt the public police. 3. *Attachments* for contempts to the ſuperior courts of juſtice.

cxliii. Sect. XXI. *Of arreſts.*

(1.) Regular proceedings in the courts of common law, are, 1. *Arreſt*. 2. *Commitment* and *bail*. 3. *Proſecution*. 4. *Proceſs*. 5. *Arraignment*, and its incidents. 6. *Plea* and *iſſue*. 7. *Trial* and *conviction*. 8. *Clergy*. 9. *Judgment*. and its conſequences. 10. *Reverſal* of judgment. 11. *Reprieve* or *pardon*. 12. *Execution*.

(2.) An *arreſt* is the apprehending, or reſtraining, of one's perſon; in order to be forthcoming to anſwer a crime whereof one is accuſed or ſuſpected.

(3.) This may be done, 1. By warrant. 2. By an officer, without warrant. 3. By a private perſon, without warrant. 4. By hue and cry.

cxliv. Sect. XXII. *Of commitment and bail.*

(1.) Commitment is the confinement of one's perſon in priſon, for ſafe cuſtody, by warrant from proper authority; unleſs, in bailable offences, he puts in ſufficient *bail*, or ſecurity for his future appearance.

(2.) The magiſtrate is bound to take reaſonable bail, if offered; unleſs the offender be not bailable.

(3.) Such are, 1. Perſons accuſed of treaſon; or, 2. Of murder; or, 3. Of manſlaughter, by indictment; or if the priſoner was clearly the ſlayer. 4. Priſon-breakers, when committed for felony. 5. Outlaws. 6. Thoſe who have abjured the realm. 7. Approvers, and appellees. 8. Perſons taken with the mainour. 9. Perſons accuſed of arſon, 10. Excommunicated perſons.

(4.) The magiſtrate may, at his diſcretion, admit to bail, or otherwiſe, perſons not of good fame, charged with other felonies, whether as principals or as acceſſories.

(5.) If they be of good fame, he is bound to admit them to bail.

(6.) The court of king's bench, or its judges in time of vacation, may bail in any caſe whatſoever.

cxlv. Sect. XXIII. *Of the ſeveral modes of proſecution.*

(1.) Proſecution, or the manner of accuſing offenders, is either by a previous finding of a grand jury; as, 1. By *preſentment*. 2. By *indictment*. Or, without ſuch finding. 3. By *information*. 4. By *appeal*.

(2.) A *preſentment* is the notice taken by a grand jury of any offence, from their own knowledge or obſervation.

(3.) An *indictment* is a written accuſation of one or more perſons of a crime or miſdemeanor, preferred to, and preſented on oath by, a grand jury; expreſſing, with ſufficient certainty, the perſon, time, place, and offence.

(4.) An *information* is, 1. At the ſuit of the king and a ſubject, upon penal ſtatutes. 2. At the ſuit of the king only. Either, 1. Filed by the attorney general *ex officio*, for ſuch miſdemeanors as affect the king's perſon or government: or, 2. Filed by the maſter of the crown office (with leave of the court of king's bench) at the relation of ſome private ſubject, for other groſs and notorious miſdemeanors. All differing from indictments in this; that they are exhibited by the informer, or the king's officer; and not on the oath of a grand jury.

(5.) An *appeal* is an accuſation or ſuit, brought by one private ſubject againſt another, for larceny, rape, mayhem, arſon, or homicide; which the king cannot diſcharge or pardon, but the party alone can releaſe.

cxlvi. Sect. XXIV. *Of proceſs upon an indictment.*

(1.) Process to bring in an offender, when indicted in his abſence, is, in miſdemeanors, by *venire facias*, diſtreſs infinite, and *capias:* in capital crimes, by *capias* only: and, in both, by outlawry.

(2.) During this ſtage of proceedings, the indictment may be removed into the court of king's bench from any inferior juriſdiction, by writ of *certiorari facias:* and cognizance muſt be claimed in places of excluſive juriſdiction.

cxlvii. Sect. XXV. *Of arraignment, and its incidents.*

(1.) Arraignment is the calling of the priſoner to the bar of the court, to anſwer the matter of the indictment.

(2.) Incident hereunto are, 1. The ſtanding mute of the priſoner; for which, in petit treaſon, and felonies of death, he ſhall undergo the *peine fort & dure.* 2. His confeſſion; which is either *ſimple*, or by way of *approvement.*

cxlviii. Sect. XXVI. *Of plea, and iſſue.*

(1.) The *plea*, or defenſive matter alleged by the priſoner, may be, 1. A plea to the juriſdiction. 2. A demurrer in point of law. 3. A plea in abatement. 4. A ſpecial plea in bar; which is, 1ſt, *Auterfoits acquit;* 2dly, *Auterfoits convict;* 3dly, *Auterfoits attaint;* 4thly, A pardon. 5. The general iſſue, not guilty.

(2.) Hereupon *iſſue* is joined by the clerk of the arraigns, on behalf of the king.

cxlix. Sect. XXVII. *Of trial, and conviction.*

(1.) Trials of offences, by the laws of England, were and are, 1. By *ordeal*, of either fire or water. 2. By the *corſned.* Both theſe have been long aboliſhed. 3. By *battle*, in appeals and improvements. 4. By the *peers* of Great Britain. 5. By *jury.*

(2.) The method and proceſs of trial by *jury* is, 1. The impannelling of the jury. 2. Challenges; 1ſt, for cauſe; 2dly, peremptory. 3. *Tales de circumſtantibus.* 4. The oath of the jury. 5. The evidence. 6. The verdict, either general or ſpecial.

(3.) *Conviction* is when the priſoner pleads, or is found guilty: whereupon, in felonies, the proſecutor is intitled to, 1. His expences. 2. Reſtitution of his goods.

cl. Sect. XXVIII. *Of the benefit of clergy.*

(1.) Clergy, or the benefit thereof, was originally derived from the uſurped juriſdiction of the Popiſh eccleſiaſtics; but hath ſince been new-modelled by ſeveral ſtatutes.

(2.) It is an exemption of the clergy from any other ſecular puniſhment for felony, than impriſonment for a year, at the court's diſcretion; and it is extended likewiſe, abſolutely, to lay peers, for the firſt offence; and to all lay-commoners, for the firſt offence alſo, upon condition of branding, impriſonment, or tranſportation.

(3.) All felonies are intitled to the benefit of clergy, except ſuch as are now ouſted by particular ſtatutes.

(4.) Felons, on receiving the benefit of clergy, (though they forfeit their goods to the crown), are diſcharged of all clergyable felonies before committed, and reſtored in all capacities and credits.

Sect. XXIX. *Of judgment, and its conſequences.* cli.

(1.) Judgment (unleſs any matter be offered in arreſt thereof) follows upon conviction; being the pronouncing of that puniſhment which is expreſsly ordained by law.

(2.) *Attainder* of a criminal is the immediate conſequence, 1. Of having judgment of death pronounced upon him. 2. Of outlawry for a capital offence.

(3.) The conſequences of attainder are, 1. *Forfeiture* to the king. 2. *Corruption of blood.*

(4.) *Forfeiture* to the king, is, 1. Of real eſtates, upon attainder;—in high treaſon, abſolutely, till the death of the late Pretender's ſons;—in felonies, for the king's year, day, and waſte;—in miſpriſion of treaſon, aſſaults on a judge, or battery ſitting the courts; during the life of the offender. 2. Of perſonal eſtates, upon conviction; in all treaſon, miſpriſion of treaſon, felony, excuſable homicide, petit larceny, ſtanding mute upon arraignment, the above-named contempts of the king's courts, and flight.

(5.) *Corruption* of *blood* is an utter extinction of all inheritable quality therein: ſo that, after the king's forfeiture is firſt ſatisfied, the criminal's lands eſcheat to the lord of the fee; and he can never afterwards inherit, be inherited, or have any inheritance derived through him.

Sect. XXX. *Of reverſal of judgment.* clii

(1.) Judgments, and their conſequences, may be *avoided*, 1. By *falſifying*, or *reverſing*, the attainder. 2. By *reprieve*, or *pardon.*

(2.) Attainders may be *falſified*, or *reverſed.* 1. Without a writ of error; for matter *dehors* the record. 2. By writ of error; for miſtakes in the judgment, or record. 3. By act of parliament; for favour.

(3.) When an *outlawry* is reverſed, the party is reſtored to the ſame plight as if he had appeared upon the *capias.* When a *judgment*, on conviction, is reverſed, the party ſtands as if never accuſed.

Sect. XXXI. *Of reprieve, and pardon.* cliii.

(1.) A reprieve is a temporary ſuſpenſion of the judgment, 1. *Ex arbitrio judicis.* 2. *Ex neceſſitate legis;* for pregnancy, inſanity, or the trial of identity of perſon, which muſt always be tried *inſtanter.*

(2.) A pardon is a permanent avoider of the judgment by the king's majeſty, in offences againſt his crown and dignity; drawn in due form of law, allowed in open court, and thereby making the offender a new man.

(3) The king cannot pardon; 1. Impriſonment of the ſubject beyond the ſeas. 2. Offences proſecuted by appeal. 3. Common nuiſances. 4. Offences againſt popular or penal ſtatutes, after information brought by a ſubject. Nor is his pardon pleable to an impeachment by the commons in parliament.

Sect. XXXII. *Of Execution*

(1.) Execution is the completion of human puniſhment, and muſt be ſtrictly performed in the manner which the law directs.

(2.) The warrant for execution is ſometimes under the hand and ſeal of the judge; ſometimes by writ from the king; ſometimes by rule of court; but commonly by the judge's ſigning the calendar of priſoners, with their ſeparate judgments in the margin.

Part III. The LAW of SCOTLAND.

GENERAL OBSERVATIONS.

cliv. Municipal law.

1. THE municipal law of Scotland, as of moſt other countries, conſiſts partly of ſtatutory or written law, which has the expreſs authority of the legiſlative power; partly of cuſtomary or unwritten law, which derives force from its preſumed or tacit conſent.

Statutory law. Acts of parliament.

2. Under the ſtatutory or written law is comprehended, (1.) The acts of parliament: not only thoſe which were made in the reign of James I. of Scotland, and from thence down to the union with England in 1707, but ſuch of the Britiſh ſtatutes enacted ſince the union as concerned this part of the united kingdom.

Regiam Majeſtatem.

3. The remains of the ancient written law were publiſhed by Sir John Skene clerk regiſter, in the beginning of the laſt century, by licence of parliament. The books of *Regiam Majeſtatem*, to which the whole collection owes its title, ſeem to be a ſyſtem of Scots law, written by a private lawyer at the command of David I.; and though no expreſs confirmation of that treatiſe by the legiſlature appears, yet it is admitted to have been the ancient law of the kingdom by expreſs ſtatutes. The borough laws, which were alſo enacted by the ſame King David, and the ſtatutes of William, Alexander II. David II. and the three Roberts, are univerſally allowed to be genuine. The parliaments have once and again appointed commiſſions to reviſe and amend the *Regiam Majeſtatem*, and the other ancient books of the law, and to make their report: but, as no report appears to have been made, nor conſequently any ratification by parliament, none of theſe remains are received, as of proper authority, in the courts; yet they are of excellent uſe in proving and illuſtrating the moſt ancient cuſtoms.

Acts of ſederunt.

4. The written law comprehends, (2.) The acts of ſederunt, which are ordinances for regulating the forms of proceeding before the court of ſeſſion in the adminiſtration of juſtice, made by the judges, who have a delegated power from the legiſlature for that purpoſe. Some of theſe acts dip upon matter of right, which declare what the judges apprehend to be the law of Scotland, and what they are to obſerve afterwards as a rule of judgment.

Authority of the civil and canon laws.

5. The civil, or Roman and canon laws, though they are not perhaps to be deemed proper parts of the written law, have undoubtedly had the greateſt influence in Scotland. The powers exerciſed by ſovereigns and judges have been juſtified upon no other ground, than that they were conformable to the civil or canon laws; and a ſpecial ſtatute was judged neceſſary, upon the reformation, to reſcind ſuch of their conſtitutions as were repugnant to the Proteſtant doctrine. From that period, the canon law has been little reſpected, except in queſtions of tithes, patronages, and ſome few more articles of eccleſiaſtical right: but the Roman continues to have great authority in all caſes where it is not derogated from by ſtatute or cuſtom, and where the genius of the law allows it to be applied.

Cuſtomary or common law.

6. The unwritten or cuſtomary law, is that which, without being expreſsly enacted by ſtatute, derives its force from the tacit conſent of king and people; which conſent is preſumed from the ancient cuſtom of the community. Cuſtom, as it is equally founded in the will of the lawgiver with written law, has therefore the ſame effects: hence, as one ſtatute may be explained or repealed by another, ſo a ſtatute may be explained by the uniform practice of the community, and even go into diſuſe by a poſterior contrary cuſtom. But this power of cuſtom to derogate from prior ſtatutes is generally confined by lawyers to ſtatutes concerning private right, and does not extend to thoſe which regard public policy.

Deciſions of the ſeſſion.

7. An uniform tract of the judments or deciſions of the court of ſeſſion is commonly conſidered as part of the cuſtomary law; and without doubt, where a particular cuſtom is thereby fixed or proved, ſuch cuſtom of itſelf conſtitutes law: but deciſions, though they bind the parties litigating, have not, in their own nature, the authority of law in ſimilar caſes; yet, where they continue uniform, great weight is juſtly laid on them. Neither can the judgments of the houſe of peers of Great Britain reach farther than to the parties in the appeal, ſince in theſe the peers act as judges, not as lawgivers.

Judgments of the houſe of peers.

Promulgation of laws.

8. Though the laws of nature are ſufficiently publiſhed by the internal ſuggeſtion of natural light, civil laws cannot be conſidered as a rule for the conduct of life, till they are notified to thoſe whoſe conduct they are to regulate. The *Scots* acts of parliament were, by moſt ancient cuſtom, proclaimed in all the different ſhires, boroughs, and baron-courts, of the kingdom. But after the ſtatutes came to be printed, that cuſtom was gradually neglected; and at laſt, the publication of the laws, at the market-croſs of Edinburgh, was declared ſufficient; and they became obligatory 40 days thereafter. Britiſh ſtatutes are deemed ſufficiently notified, without formal promulgation; either becauſe the printing is truly a publication; or becauſe

every ſubject is, by a maxim of the Engliſh law, party to them, as being preſent in parliament, either by himſelf or his repreſentative. After a law is publiſhed, no pretence of ignorance can excuſe the breach of it.

9. As laws are given for the rule of our conduct, they can regulate future caſes only; for paſt actions being out of our power, can admit of no rule. Declaratory laws form no exception to this; for a ſtatute, where it is declaratory of a former law, does no more than interpret its meaning; and it is included in the notion of interpretation, that it muſt draw back to the date of the law interpreted.

Interpretation of laws.

10. By the rules of interpreting ſtatute-law received in Scotland, an argument may be uſed from the title to the act itſelf, *a rubro ad nigrum*; at leaſt, where the rubric has been either originally framed, or afterwards adopted by the legiſlature. The preamble or narrative, which recites the inconveniences that had ariſen from the former law; and the cauſes inducing the enactment, may alſo lead a judge to the general meaning of the ſtatute. But the chief weight is to be laid on the ſtatutory words.

11. Laws, being directed to the unlearned as well as the learned, ought to be conſtrued in their moſt obvious meaning, and not explained away by ſubtle diſtinctions; and no law is to ſuffer a figurative interpretation, where the proper ſenſe of the words is as commodious, and equally fitted to the ſubject of the ſtatute. Laws ought to be explained ſo as to exclude abſurdities, and in the ſenſe which appears moſt agreeable to former laws, to the intention of the lawgiver, and to the general frame and ſtructure of the conſtitution. In prohibitory laws, where the right of acting is taken from a perſon, ſolely for the private advantage of another, the conſent of him, in whoſe behalf the law was made, ſhall ſupport the act done in breach of it; but the conſent of parties immediately intereſted has no effect in matters which regard the public utility of a ſtate. Where the words of a ſtatute are capable but of one meaning, the ſtatute muſt be obſerved, however hard it may bear on particular perſons. Nevertheleſs, as no human ſyſtem of laws can comprehend all poſſible caſes, more may ſometimes be meant by the lawgiver than is expreſſed; and hence certain ſtatutes, where extenſion is not plainly excluded, may be extended beyond the letter, to ſimilar and omitted caſes: others are to be confined to the ſtatutory words.

Strict.

12. A ſtrict interpretation is to be applied, (1.) To correctory ſtatutes, which repeal or reſtrict former laws; and to ſtatutes which enact heavy penalties, or reſtrain the natural liberties of mankind. (2.) Laws, made on occaſion of preſent exigencies in a ſtate, ought not to be drawn to ſimilar caſes, after the preſſure is over. (3) Where ſtatutes, eſtabliſh certain ſolemnities as requiſite to deeds, ſuch ſolemnities are not ſuppliable by equivalents for ſolemnities loſe their nature, when they are not performed ſpecifically. (4.) A ſtatute, which enumerates ſpecial caſes, is, with difficulty, to be extended to caſes not expreſſed; but, where a law does not deſcend to particulars, there is greater reaſon to extend it to ſimilar caſes. (5.) Statutes, which carry a diſpenſation or privilege to particular perſons or ſocieties, ſuffer a ſtrict interpretation; becauſe they derogate from the general law, and imply a burden upon the reſt of the community. But at no rate can a privilege be explained to the prejudice of thoſe in whoſe behalf it was granted. As the only foundation of cuſtomary law is uſage, which conſiſts in fact, ſuch law can go no farther than the particular uſage has gone.

Ample.

13. All ſtatutes, concerning matters ſpecially favoured by law, receive an ample interpretation; as laws for the encouragement of commerce, or of any uſeful public undertaking, for making effectual the wills of dying perſons, for reſtraining fraud, for the ſecurity of creditors, &c. A ſtatute, though its ſubject-matter ſhould not be a favourite of the law, may be extended to ſimilar caſes, which did not exiſt when the ſtatute was made; and for which, therefore, it was not in the power of the lawgiver to provide.

14. Every ſtatute, however unfavourable, muſt receive the interpretation neceſſary to give it effect: and, on the other hand, in the extenſion of favourable laws, ſcope muſt not be given to the imagination, in diſcovering remote reſemblances; the extenſion muſt be limited to the caſes immediately ſimilar. Where there is ground to conclude that the legiſlature has omitted a caſe out of the ſtatute purpoſely, the ſtatute cannot be extended to that caſe, let it be ever ſo ſimilar to the caſes expreſſed.

15. The objects of the laws of Scotland, according to Mr Erſkine, one of the lateſt writers on the ſubject, are, Perſons, Things, and Actions.

CHAP. I.

Of PERSONS.

AMONG perſons, judges, who are inveſted with juriſdiction, deſerve the firſt conſideration.

SECT. I. *Of juriſdiction and judges in general.*

clvi.

Juriſdiction.

JURISDICTION is a power conferred upon a judge or magiſtrate, to take cogniſance of and decide cauſes according to law, and to carry his ſentences into execution. That tract of ground, or diſtrict, within which a judge has the right of juriſdiction is called his *territory*: and every act of juriſdiction exerciſed by a judge without his territory, either by pronouncing ſentence, or carrying it into execution, is null.

King the fountain of juriſdiction

2. The ſupreme power, which has the right of enacting laws, falls naturally to have the right of erecting courts, and appointing judges, who may apply theſe laws to particular caſes; but, in Scotland, this right has been always intruſted with the crown, as having the executive power of the ſtate.

Diſtinctions of juriſdictions.

3 Juriſdiction is either ſupreme, inferior, or mixed. That juriſdiction is ſupreme, from which there lies no appeal to a higher court. Inferior courts are thoſe whoſe ſentences are ſubject to the review of the ſupreme courts, and whoſe juriſdiction is confined to a particular territory. Mixed juriſdiction participates of the nature both of the ſupreme and inferior: thus the judge of the high court of admiralty, and the commiſſaries of Edinburgh, have an univerſal juriſdiction over Scotland, and they can review the decrees of inferior admirals and commiſſaries; but ſince their own decrees are ſubject to the review of the courts of ſeſſion or juſticiary, they are, in that reſpect, inferior courts.

4. Juriſdiction is either civil or criminal: by the firſt, queſtions of private right are decided; by the other, crimes are puniſhed. But, in all juriſdiction, though

merely civil, there is a power inherent in the judge to puniſh either corporally, or by a pecuniary fine, thoſe who offend during the proceedings of the court, or who ſhall afterwards obſtruct the execution of the ſentence.

5. Juriſdiction is either privative or cumulative. Privative juriſdiction, is that which belongs only to one court, to the excluſion of all others. Cumulative, otherwiſe called *concurrent*, is that which may be exerciſed by any one of two or more courts, in the ſame cauſe. In civil cumulative juriſdiction, the private purſuer has the right of election before which of the courts he ſhall ſue; but as, in criminal queſtions which are proſecuted by a public officer of court, a colliſion of juriſdiction might happen, through each of the judges claiming the exerciſe of their right, that judge, by whoſe warrant the delinquent is firſt cited or apprehended (which is the firſt ſtep of juriſdiction), acquires thereby *(jure præventionis)* the excluſive right of judging in the cauſe.

6. All rights of juriſdiction, being originally granted in conſideration of the fitneſs of the grantee, were therefore perſonal, and died with himſelf. But, upon the introduction of the feudal ſyſtem, certain juriſdictions were annexed to lands, and deſcended to heirs, as well as the lands to which they were annexed; but now all heritable juriſdictions, except thoſe of admiralty and a ſmall pittance reſerved to barons, are either aboliſhed, or reſumed and annexed to the crown.

7. Juriſdiction, is either proper or delegated. Proper juriſdiction, is that which belongs to a judge or magiſtrate himſelf, in virtue of his office. Delegated, is that which is communicated by the judge to another who acts in his name, called a *depute* or *deputy*. Where a deputy appoints one under him, he is called a *ſubſtitute*. No grant of juriſdiction, which is an office requiring perſonal qualifications, can be delegated by the grantee to another, without an expreſs power in the grant.

Civil juriſdiction, wherein founded.

8. Civil juriſdiction is founded, 1. *Ratione domicilii*, if the defender has his domicile within the judge's territory. A domicile is the dwelling place where a perſon lives with an intention to remain; and cuſtom has fixed it as a rule, that reſidence for 40 days founds juriſdiction. If one has no fixed dwelling place, *e. g.* a ſoldier, or a travelling merchant, a perſonal citation againſt him within the territory is ſufficient to found the judge's juriſdiction over him, even in civil queſtions. As the defender is not obliged to appear before a court to which he is not ſubject, the purſuer muſt follow the defender's domicile.

9. It is founded, 2. *Ratione rei ſitæ*, if the ſubject in queſtion lie within the territory. If that ſubject be immoveable, the judge, whoſe juriſdiction is founded in this way, is the ſole judge competent, excluding the judge of the domicile.

Letters of ſupplement

10. Where one, who has not his domicile within the territory, is to be ſued before an inferior court *ratione rei ſitæ*, the court of ſeſſion muſt be applied to, whoſe juriſdiction is univerſal, and who, of courſe, grant letters of ſupplement to cite the defender to appear before the inferior judge. Where the party to be ſued reſides in another kingdom, and has an eſtate in this, the court of ſeſſion is the only proper court, as the *commune forum* to all perſons reſiding abroad: and the defender, if his eſtate be heritable, is conſidered as lawfully ſummoned to that court, by a citation at the market-croſs of Edinburgh, and pier and ſhore of Leith: but where a ſtranger, not a native of Scotland, has only a moveable eſtate in the kingdom, he is deemed to be ſo little ſubject to the juriſdiction of their courts, that action cannot be brought againſt him till his effects be firſt attached by an arreſtment *juriſdictionis fundandæ cauſa;* which is laid on by a warrant iſſuing from the ſupreme courts of ſeſſion, or admiralty, or from that within whoſe territory the ſubject is ſituated, at the ſuit of the creditor.

Arreſtment of ſtrangers.

11. A judge may, in ſpecial caſes, arreſt or ſecure the perſons of ſuch as have neither domicile nor eſtate within his territory, even for civil debts. Thus, on the border between Scotland and England, warrants are granted of courſe by the judge-ordinary of either ſide, againſt thoſe who have their domicile upon the oppoſite ſide, for arreſting their perſons, till they give caution *judicio ſiſti:* and even the perſons of citizens or natives may be ſo ſecured, where there is juſt reaſon to ſuſpect that they are *in meditatione fugæ*, i. e. that they intend ſuddenly to withdraw from the kingdom; upon which ſuſpicion, the creditor who applies for the warrant muſt make oath. An inhabitant of a borough-royal, who has furniſhed one who lives without the borough in meat, clothes, or other merchandize, and who has no ſecurity for it but his own account-book, may arreſt his debtor, till he give ſecurity *judicio ſiſti*.

Grounds of declinature.

12. A judge may be declined, *i. e.* his juriſdiction diſowned judicially, 1. *Ratione cauſæ*, i. e. from his incompetency to the ſpecial cauſe brought before him. 2. *Ratione ſuſpecti judicis;* where either the judge himſelf, or his near kinſman, has an intereſt in the ſuit. No judge can vote in the cauſe of his father, brother, or ſon, either by conſanguinity or affinity; nor in the cauſe of his uncle or nephew by conſanguinity. 3. *Ratione privilegii;* where the party is by privilege exempted from their juriſdiction.

Prorogated juriſdiction

13. Prorogated juriſdiction *(juriſdictio in conſentientes)* that which is, by the conſent of parties, conferred upon a judge, who, without ſuch conſent, would be incompetent. Where a judge is incompetent, every ſtep he takes muſt be null, till his juriſdiction be made competent by the party's actual ſubmiſſion to it. It is otherwiſe where the judge is competent, but may be declined by the party upon privilege.

14. In order to prorogation, the judge muſt have juriſdiction, ſuch as may be prorogated. Hence, prorogation cannot be admitted where the judge's juriſdiction is excluded by ſtatute. Yet where the cauſe is of the ſame nature with thoſe to which the judge is competent, though law may have confined his juriſdiction within a certain ſum, parties may prorogate it above that ſum unleſs where prorogation is prohibited. Prorogation is not admitted in the king's cauſes; for the intereſt of the crown cannot be hurt by the negligence of its officers.

Oaths of judges.

15. All judges muſt at their admiſſion ſwear, 1. The oath of allegiance, and ſubſcribe the aſſurance; 2. The oath of abjuration; 3. The oath of ſupremacy; laſtly, The oath *de fideli adminiſtratione*.

Letters of advocation.

16. A party who has either properly declined the juriſdiction of the judge before whom he had been cited, or who thinks himſelf aggrieved by any proceed-

ings in the cauſe, may, before decree, apply to the court of ſeſſion to iſſue letters of advocation for calling the action from before the inferior court to themſelves. The grounds, therefore, upon which a party may pray for letters of advocation, are incompetency and iniquity. Under incompetency, is comprehended not only defect of juriſdiction, but all the grounds of declining a juriſdiction, in itſelf competent, ariſing either from ſuſpicion of the judge, or privilege in the parties. A judge is ſaid to commit iniquity, when he either delays juſtice, or pronounces ſentence, in the exerciſe of his juriſdiction, contrary to law.

Advocation how limited.

17. That the court of ſeſſion may not waſte their time in trifles, no cauſe for a ſum below twelve pounds Sterling can be advocated to the court of ſeſſion from the inferior judge competent; but if an inferior judge ſhall proceed upon a cauſe to which he is incompetent, the cauſe may be carried from him by advocation, let the ſubject be ever ſo inconſiderable.

clvii. SECT. II. *Of the ſupreme judges and courts of Scotland.*

King, and parliament.

1. THE king, who is the fountain of juriſdiction, might by the conſtitution have judged in all cauſes, either in his own perſon, or by thoſe whom he was pleaſed to veſt with juriſdiction.

2. The parliament of Scotland, as the court of the laſt reſort, had the right of reviewing the ſentences of all the ſupreme courts.

Parliament of Great Britain.

3. By the treaty of union, 1707, the parliaments of Scotland and England are united into one parliament of Great Britain. From this period, the Britiſh houſe of peers, as coming in place of the Scots parliament, is become the court of the laſt reſort, to which appeals lie from all the ſupreme courts of Scotland: but that court has no original juriſdiction in civil matters, in which they judge only upon appeal. By *art.* 22. of that treaty, the Scots ſhare of the repreſentation in the houſe of peers is fixed to 16 Scots peers elective; and in the houſe of commons, to 45 commoners, of which 30 are elected by the freeholders of counties, and 15 by the royal boroughs. The Scots privy council was alſo thereupon aboliſhed, and ſunk into that of Great Britain, which for the future is declared to have no other powers than the Engliſh privy council had at the time of the union.

Court of ſeſſion.

4. A court was erected in 1425, conſiſting of certain perſons to be named by the king, out of the three eſtates of parliament, which was veſted with the juriſdiction formerly lodged in the council, and got the name of the *ſeſſion*, becauſe it was ordained to hold annually a certain number of ſeſſions at the places to be ſpecially appointed by the king. This court had a juriſdiction, cumulative with the judge ordinary, in ſpuilzies, and other poſſeſſory actions, and in debts; but they had no cogniſance in queſtions of property of heritable ſubjects. No appeal lay from its judgments to the parliament. The judges of this court ſerved by rotation, and were changed from time to time, after having ſat 40 days; and became ſo negligent in the adminiſtration of juſtice, that it was at laſt thought neceſſary to transfer the juriſdiction of this court to a council to be named by the king, called the *daily council*.

College of juſtice.

5. The preſent model of the court of ſeſſion, or college of juſtice, was formed in the reign of James V. The judges thereof, who were veſted with an univerſal civil juriſdiction, conſiſting originally of ſeven churchmen, ſeven laymen, and a preſident, whom it behoved to be a prelate; but ſpiritual judges were in 1584 partly, and in 1640 totally, prohibited. The judges of ſeſſion have been always received by warrants from the crown. Anciently his majeſty ſeems to have transferred to the court itſelf the right of chooſing their own preſident; and in ſederunt recorded June 26. 1593, the king condeſcended to preſent to the lords, upon every vacancy in the bench, a liſt of three perſons, out of which they were to chooſe one. But his majeſty ſoon reſumed the exerciſe of both rights, which continued with the crown till the uſurpation; when it was ordained, that the king ſhould name the judges of the ſeſſion, by the advice of parliament. After the reſtoration, the nomination was again declared to be ſolely in the ſovereign.

Judges, by whom named.

Their qualifications and trial.

6. Though judges may, in the general caſe, be named at the age of 21 years, the lords of ſeſſion muſt be at leaſt 25. No perſon can be named lord of ſeſſion, who has not ſerved as an advocate or principal clerk of ſeſſion for five years, or as a writer to the ſignet for ten: and in the caſe of a writer to the ſignet, he muſt undergo the ordinary trials upon the Roman law, and be found qualified two years before he can be named. Upon a vacancy in the bench, the king preſents the ſucceſſor by a letter addreſſed to the lords, wherein he requires them to try and admit the perſon preſented. The powers given to them to reject the preſentee upon trial are taken away, and a bare liberty to remonſtrate ſubſtituted in its place.

7. Beſides the 15 ordinary judges, the king was allowed to name three or four lords of his great council, who might ſit and vote with them. Theſe extraordinary lords were ſuppreſſed in the reign of Geo. I.

Privileges of the college of juſtice.

8. The appellation of the *college of juſtice* is not confined to the judges, who are diſtinguiſhed by the name of *ſenators*; but comprehends advocates, clerks of ſeſſion, writers to the ſignet, and others, as deſcribed, *Act S.* 23d Feb. 1687. Where, therefore, the college of juſtice is intitled to any privilege, it extends to all the members of the college. They are exempted from watching, warding, and other ſervices within borough; and from the payment of miniſters ſtipends, and of all cuſtoms, &c. impoſed upon goods carried to or from the city of Edinburgh. Part of theſe privileges and immunities were lately called in queſtion by the city of Edinburgh; but they were found by the court of ſeſſion (affirmed upon appeal) to be in full force.

Juriſdiction of the ſeſſion.

9. Though the juriſdiction of the ſeſſion be properly limited to civil cauſes, the judges have always ſuſtained themſelves as competent to the crime of falſehood. Where the falſehood deſerves death or demembration, they, after finding the crime proved, remit the criminal to the court of juſticiary. Special ſtatute has given to the court of ſeſſion juriſdiction in contraventions of law-burrows, deforcements, and breach of arreſtment; and they have been in uſe to judge in battery *pendente lite*, and in uſury.

10. In certain civil cauſes, the juriſdiction of the ſeſſion is excluſive of all inferior juriſdictions; as in declarators of property, and other competitions of heritable

table rights, provings of the tenor *ceſſiones bonorum*, reſtitution of minors, reductions of decrees or of writings, ſales of the eſtates of minors or bankrupts, *&c.* In a ſecond claſs of cauſes, that juriſdiction can be only exerciſed in the way of review, after the cauſe is brought from the inferior court; as in maritime and conſiſtorial cauſes, which muſt be purſued in the firſt inſtance before the admiral or commiſſary; and in actions below twelve pounds Sterling, which muſt be commenced before the judge-ordinary. In all civil actions, which fall under neither of theſe claſſes, the juriſdiction of the ſeſſion is concurrent, even in the firſt inſtance, with that of the judge-ordinary. The ſeſſion may proceed as a court of equity by the rules of conſcience, in abating the rigour of law, and giving aid in proper caſes to ſuch as in a court of law can have no remedy: and this power is inherent in the ſupreme court of every country, where ſeparate courts are not eſtabliſhed for law and for equity.

This court formerly met upon the 12th day of June and roſe upon the 11th day of Auguſt for the ſummer ſeſſion; but now, in conſequence of an act paſſed in the ſeſſion of parliament 1790, it meets on the 12th of May and riſes on the 11th of July for the ſummer ſeſſion; the winter ſederunt ſtill remaining as formerly, *viz.* from the 12th of November to the 11th of March incluſive.

Juſticiary court.

11. The ſupreme criminal judge was ſtyled the Juſticiar; and he had anciently an univerſal civil juriſdiction, even in matters of heritage. He was obliged to hold two juſtice courts or ayres yearly at Edinburgh or Peebles, where all the freeholders of the kingdom were obliged to attend. Beſides this univerſal court, ſpecial juſtice-ayres were held in all the different ſhires in the kingdom twice in the year. Theſe laſt having gone into diſuſe, eight deputies were appointed, two for every quarter of the kingdom, who ſhould make their circuits over the whole in April and October.

12. The office of deputies was ſuppreſſed in 1672; and five lords of ſeſſion were added, as commiſſioners of juſticiary, to the juſtice-general and juſtice-clerk. The juſtice-general, if preſent, is conſtant preſident of the court, and in his abſence the juſtice-clerk. The kingdom is divided into three diſtricts, and two of the judges are appointed to hold circuits in certain boroughs of each diſtrict twice in the year; one judge may proceed to buſineſs in the abſence of his colleague. In trials before this court the evidence was always taken down in writing till the act 23d Geo. III. was paſſed; by which the judges may try and determine all cauſes by the verdict of an aſſize upon examining the witneſſes *viva voce* without reducing the teſtimony into writing, unleſs it ſhall appear more expedient to proceed in the former way, which they have it in their power to do. This act was at firſt temporary, but is now made perpetual by 27th Geo. III. cap. 18.

13. By an old ſtatute, the crimes of robbery, rape, murder, and wilful fire raiſing, (the four pleas of the crown), are ſaid to be reſerved to the king's court of juſticiary; but the only crime in which, *de praxi*, the juriſdiction of juſticiary became at laſt excluſive of all inferior criminal juriſdiction, was that of high treaſon. The court of juſticiary, when ſitting at Edinburgh, has a power of advocating cauſes from all inferior criminal judges, and of ſuſpending their ſentences.

14. The circuit-court can alſo judge on all criminal cauſes which do not infer death or demembration, upon appeal from any inferior court within their diſtrict; and has a ſupreme civil juriſdiction, by way of appeal, in all cauſes not exceeding twelve pounds Sterling, in which their decrees are not ſubject to review; but no appeal is to lie to the circuit, till the cauſe be finally determined in the inferior court.

Court of exchequer.

15. The court of exchequer, as the king's chamberlain court, judged in all queſtions of the revenue. In purſuance of the treaty of Union, that court was aboliſhed, and a new court erected, conſiſting of the Lord High Treaſurer of Great Britain, and a chief Baron, with four other Barons of Exchequer; which Barons are to be made of ſerjeants at law, Engliſh barriſters, or Scots advocates of five years ſtanding. This court has a privative juriſdiction conferred upon it, as to the duties of cuſtoms, exciſe, or other revenues appertaining to the king or prince of Scotland, and as to all honours and eſtates that may accrue to the crown; in which matters, they are to judge by the forms of proceeding uſed in the Engliſh court of exchequer, under the following limitations; that no debt due to the crown ſhall affect the debtor's real eſtate in any other manner than ſuch eſtate may be affected by the laws of Scotland, and that the validity of the crown's titles to any honours or lands ſhall continue to be tried by the court of ſeſſion. The barons have the powers of the Scots court transferred to them, of paſſing the accounts of ſheriffs, or other officers who have the execution of writs iſſuing from, or returnable to, the court of exchequer, and of receiving reſignations, and paſſing ſignatures of charters, gifts of caſualties, &c. But though all theſe muſt paſs in exchequer, it is the court of ſeſſion only who can judge of their preference after they are completed.

Admiralty court.

16. The juriſdiction of the admiral in maritime cauſes was of old concurrent with that of the ſeſſion. The high-admiral is declared the king's juſtice-general upon the ſeas, on freſh water within flood-mark, and in all harbours and creeks. His civil juriſdiction extends to all maritime cauſes; and ſo comprehends queſtions of charter-parties, freights, ſalvages, bottomries, &c. He exerciſes this ſupreme juriſdiction by a delegate, the judge of the high court of admiralty; and he may alſo name inferior deputies, whoſe juriſdiction is limited to particular diſtricts, and whoſe ſentences are ſubject to the review of the high court. In cauſes which are declared to fall under the admiral's cognizance, his juriſdiction is ſole; in ſo much, that the ſeſſion itſelf, though it may review his decrees by ſuſpenſion or reduction, cannot carry a maritime queſtion from him by advocation. The admiral has acquired, by uſage, a juriſdiction in mercantile cauſes, even where they are not ſtrictly maritime, cumulative with that of the judge-ordinary.

Signet.

17. All the ſupreme courts have ſeals or ſignets, proper to their ſeveral juriſdictions. The courts of ſeſſion and juſticiary uſed formerly the ſame ſignet, which was called the king's, becauſe the writs iſſuing from thence run in the king's name; and though the juſticiary got at laſt a ſeparate ſignet for itſelf, yet that of the ſeſſion ſtill retains the appellation of the *king's ſignet*. In this office are ſealed ſummonſes for citation, letters of executorial diligence, or for ſtaying or prohibiting of dili-

gence, and generally whatever paſſes by the warrant of the ſeſſion, and is to be executed by the officers of the court. All theſe muſt, before ſealing, be ſigned by the writers or clerks of the ſignet: But letters of diligence, where they are granted in a depending proceſs, merely for probation, though they paſs by the ſignet, muſt be ſubſcribed by a clerk of ſeſſion. The clerks of the ſignet alſo prepare and ſubſcribe all ſignatures of charters, or other royal grants, which paſs in exchequer.

clviii. SECT. III. *Of the inferior judges and courts of Scotland.*

Sheriff.

SHERIFF (from *reeve*, governor, and *ſheer* to cut or divide), is the judge-ordinary conſtituted by the crown over a particular diviſion or county. The ſheriff's juriſdiction, both civil and criminal, was, in ancient times, nearly as ample within his own territory as that of the ſupreme courts of ſeſſion and juſticiary was over the whole kingdom.

2. His civil juriſdiction now extends to all actions upon contracts, or other perſonal obligations; forthcomings, poindings of the ground, mails and duties; and to all poſſeſſory actions, as removings, ejections, ſpuilzies, &c.; to all brieves iſſuing from the chancery, as of inqueſt, terce, diviſion, tutory, &c.; and even to adjudications of land eſtates, when proceeding on the renunciation of the apparent heir. His preſent criminal juriſdiction extends to certain capital crimes, as theft, and even murder, though it be one of the pleas of the crown; and he is competent to moſt queſtions of public police, and has a cumulative juriſdiction with juſtices of the peace in all riots and breaches of the peace.

3. Sheriffs have a miniſterial power, in virtue of which they return juries, in order to the trial of cauſes that require juries. The writs for electing members of parliament have been, ſince the union, directed to the ſheriffs, who, after they are executed, return them to the crown-office from whence they iſſued. They alſo execute writs iſſuing from the court of exchequer; and in general, take care of all eſtates, duties, or caſualties that fall to the crown within their territory, for which they muſt account to the exchequer.

Lord of regality.

4. A lord of regality was a magiſtrate who had a grant of lands from the ſovereign, with royal juriſdiction annexed thereto. His civil juriſdiction was equal to that of a ſheriff; his criminal extended to the four pleas of the crown. He had a right to repledge or reclaim all criminals, ſubject to his juriſdiction, from any other competent court, though it were the juſticiary itſelf, to his own. He had alſo right, according to the moſt common opinion, to the ſingle eſcheat of all denounced perſons reſiding within his juriſdiction, even though ſuch privilege had not been expreſſed in the grant of regality.

Stewart,

5. The ſtewart was the magiſtrate appointed by the king over ſuch regality lands as happened to fall to the crown by forfeiture, &c. and therefore the ſtewart's juriſdiction was equal to that of a regality. The two ſtewartries of Kirkcudbright, and of Orkney and Shetland, make ſhires or counties by themſelves, and ſend each a repreſentative to parliament.

Bailie.

6. Where lands not erected into a regality fell into the king's hands, he appointed a bailie over them, whoſe juriſdiction was equal to that of a ſheriff.

7. By the late juriſdiction-act, 20 Geo. II. all heritable regalities and bailieries, and all ſuch heritable ſheriffſhips and ſtewartries as were only parts of a ſhire, are diſſolved; and the powers formerly veſted in them are made to devolve upon ſuch of the king's courts as theſe powers would have belonged to if the juriſdictions diſſolved had never been granted. All ſheriffſhips and ſtewartries that were no part of a ſhire, where they had been granted, either heritably or for life, are reſumed and annexed to the crown. No high ſheriff or ſtewart can hereafter judge perſonally in any cauſe. One ſheriff or ſtewart-depute is to be appointed by the king in every ſhire, who muſt be an advocate of three years ſtanding; and whoſe office as ſheriff or ſtewart-depute is now by 28 Geo. II. held *ad vitam aut culpam*.

Prince of Scotland.

8. The appendage, or patrimony, of the prince of Scotland, has been long erected into a regality-juriſdiction, called the Principality. It is perſonal to the king's eldeſt ſon, upon whoſe death or ſucceſſion it returns to the crown. The prince has, or may have, his own chancery, from which his writs iſſue, and may name his own chamberlain and other officers for receiving and managing his revenue. The vaſſals of the princes are intitled to elect, or to be elected, members of parliament for counties, equally with thoſe who hold of the crown.

9. Juſtices of the peace are magiſtrates named by the ſovereign over the ſeveral counties of the kingdom, for the ſpecial purpoſe of preſerving the public peace. Anciently their power reached little farther than to bind over diſorderly perſons for their appearance before the privy council or juſticiary; afterwards they were authoriſed to judge in breaches of the peace, and in moſt of the laws concerning public policy. They may compel workmen or labourers to ſerve for a reaſonable fee, and they can condemn maſters in the wages due to their ſervants. They have power to judge in queſtions of highways, and to call out the tenants with their cottars and ſervants to perform ſix days work yearly for upholding them. It has been lately, however, found by the court of ſeſſion, that juſtices have no juriſdiction whatever in common actions for debt. So that it now ſeems fixed, that they are incompetent in ſuch actions, except where they are declared competent by ſpecial ſtatute.

10. Since the union, the juſtices of the peace, over and above the powers committed to them by the laws of Scotland, are authoriſed to exerciſe whatever belonged to the office of an Engliſh juſtice, in relation to the public peace. From that time, the Scots and the Engliſh commiſſions have run in the ſame ſtyle, which contain powers to inquire into and judge in all capital crimes, witchcrafts, felonies, and ſeveral others ſpecially enumerated; with this limitation ſubjoined, *of which juſtices of the peace may lawfully inquire*. Two juſtices can conſtitute a court. Special ſtatute has given the cognizance of ſeveral matters of exciſe to the juſtices, in which their ſentences are final. As to which, and the powers thereby veſted in them, the reader muſt of neceſſity be referred to the exciſe laws; it not falling within the plan of this work, to enter into ſo very minute a detail as that would prove.

Boroughs.

11. A borough is a body-corporate, made up of the inhabitants of a certain tract of ground erected by the ſovereign, with juriſdiction annexed to it. Bo-

roughs are erected, either to be holden of the ſovereign himſelf, which is the general caſe of royal boroughs; or of the ſuperior of the lands erected, as boroughs of regality and barony. Boroughs royal have power, by their charters, to chooſe annually certain office-bearers or magiſtrates; and in boroughs of regality and barony, the nomination of magiſtrates is, by their charter, lodged ſometimes in the inhabitants, ſometimes in the ſuperior. Bailies of boroughs have juriſdiction in matters of debt, ſervices, and queſtions of poſſeſſion betwixt the inhabitants. The criminal juriſdiction extends to petty riots, and reckleſs fire-raiſing. The dean of guild is that magiſtrate of a royal borough who is head of the merchant-company; he has the cognizance of mercantile cauſes within borough; and the inſpection of buildings, that they encroach neither on private property, nor on the public ſtreets; and he may direct inſufficient houſes to be pulled down. His juriſdiction has no dependence on the court of the borough, or bailie-court.

Barons.

12. A baron, in the large ſenſe of that word, is one who holds his lands immediately of the crown; and, as ſuch, had, by the ancient conſtitution, right to a ſeat in parliament, however ſmall his freehold might have been. The leſſer barons were exempted from the burden of attending the ſervice of parliament. This exemption grew inſenſibly into an utter diſability in all the leſſer barons from ſitting in parliament, without election by the county; though no ſtatute is to be found expreſsly excluding them.

13. To conſtitute a baron in the ſtrict law-ſenſe, his lands muſt have been erected, or at leaſt confirmed, by the king, *in liberam baroniam;* and ſuch baron had a certain juriſdiction, both civil and criminal, which he might have exerciſed, either in his own perſon, or by his bailie.

14. By the late juriſdiction-act, the civil juriſdiction of a baron is reduced to the power of recovering, from his vaſſals and tenants, the rents of his lands, and of condemning them in mill-ſervices; and of judging in cauſes where the debt and damages do not exceed 40 s. Sterling. His criminal juriſdiction is, by the ſame ſtatute, limited to aſſaults, batteries, and other ſmaller offences, which may be puniſhed by a fine not exceeding 20 s. Sterling, or by ſetting the offender in the ſtocks in the day-time not above three hours; the fine to be levied by poinding, or one month's impriſonment. The juriſdiction formerly competent to proprietors of mines, and coal or ſalt works, over their workmen, is reſerved; and alſo that which was competent to proprietors who had the right of fairs or markets, for correcting the diſorders that might happen during their continuance; provided they ſhall exerciſe no juriſdiction inferring the loſs of life or dememberation.

Conſtabularies.

15. The high conſtable of Scotland had no fixed territorial juriſdiction, but followed the court; and had, jointly with the mariſchal, the cognizance of all crimes committed within two leagues of it. All other conſtabularies were dependent on him: theſe had caſtles, and ſometimes boroughs, ſubject to their juriſdiction, as Dundee, Montroſe, &c. and among other powers, now little known, they had the right of exerciſing criminal juriſdiction within their reſpective territories during the continuance of fairs. By the late juriſdiction-act, all juriſdictions of conſtabulary are diſſolved, except that of high-conſtable.

Lyon king at arms.

16. The office of the Lyon King of arms was chiefly miniſterial, to denounce war, proclaim peace, carry public meſſages, &c. But he has alſo a right of juriſdiction, whereby he can puniſh all who uſurp arms contrary to the law of arms, and deprive or ſuſpend meſſengers, heralds, or purſuivants, (who are officers named by himſelf); but he has no cognizance of the damage ariſing to the private party through the meſſenger's fault. Meſſengers are ſubſervient to the ſupreme courts of ſeſſion and juſticiary; and their proper buſineſs is to execute all the king's letters either in civil or criminal cauſes. They muſt find caution for the proper diſcharge of their duty *qua* meſſengers; and in caſe of any malverſation, or neglect, by which damage ariſes to their employers, their ſureties may be recurred upon for indemnification. Theſe ſureties, however, are not anſwerable for the conduct of the meſſenger in any other capacity but *qua* ſuch; and therefore, if a meſſenger is authoriſed to uplift payment from a debtor, and fails to account to his employer, the cautioner is not liable; his obligation extending only to the regular and proper duties of the office in executing the diligence, or the like.

Sentence-money.

17. The judges had, for a long time, no other ſalaries or appointments than what aroſe from the ſentences they pronounced. The criminal judges applied to their own uſe the fines or iſſues of their ſeveral courts; and regalities had a right to the ſingle eſcheat of all perſons denounced, who reſided within their juriſdiction; and the civil judges got a certain proportion of the ſum contained in the decree pronounced. But theſe were all prohibited upon regular ſalaries being ſettled upon them.

Sect. V. *Of eccleſiaſtical perſons.*

clix,

The pope:

The Pope, or biſhop of Rome, was long acknowledged, over the weſtern part of Chriſtendom, for the head of the Chriſtian church. The papal juriſdiction was aboliſhed in Scotland *anno* 1560. The king was, by act 1669, declared to have ſupreme authority over all perſons, and in all cauſes eccleſiaſtical; but this act was repealed by 1690, as inconſiſtent with Preſbyterian church-government, which was then upon the point of being eſtabliſhed.

Clergy,

2. Before the reformation from Popery, the clergy was divided into ſecular and regular. The ſecular had a particular tract of ground given them in charge, within which they exerciſed the paſtoral office of biſhop, preſbyter, or other church-officer. The regular clergy had no cure of ſouls; but were tied down to reſidence in their abbacies, priories, or other monaſteries: and they got the name of *regular*, from the rules of mortification to which they were bound, according to the inſtitution of their ſeveral orders. Upon the vacancy of any benefice, whether ſecular or regular, commendators were frequently appointed to levy the fruits, as factors or ſtewards during the vacancy. The Pope alone could give the higher benefices *in commendam;* and at laſt, from the plenitude of his power, he came to name commendators for life, and without any obli-

gation to account. After the reformation, ſeveral abbacies and priories were given by James VI. *in perpetuam commendam*, to laics.

3. Upon aboliſhing the Pope's authority, the regular clergy were totally ſuppreſſed; and, in place of all the different degrees which diſtinguiſhed the ſecular clergy, they had at firſt only parochial preſbyters or miniſters, and ſuperintendants, who had the overſight of the church within a certain diſtrict: ſoon thereaſter the church-government became epiſcopal by archbiſhops, biſhops, &c.; and after ſome intermediate turns, is now preſbyterian by kirk-ſeſſions, preſbyteries, ſynods, and general aſſemblies.

4. Prelate, in the ſtatutes, ſignifies a biſhop, abbot, or other dignified clergyman, who in virtue of his office had a ſeat in parliament. Every biſhop had his chapter, which conſiſted of a certain number of the miniſters of the dioceſe, by whoſe aſſiſtance he managed the affairs of the church within that diſtrict. The nomination of biſhops to vacant ſees has been in the crown ſince 1540, though under the appearance of continuing the ancient right of election, which was in the chapter. The confirmation by the crown under the great ſeal, of the chapter's election, conferred a right to the ſpirituality of the benefice; and a ſecond grant, upon the conſecration of the biſhop-elect, gave a title to the temporality; but this ſecond grant fell ſoon into diſuſe.

Patronage.

5. He who founded or endowed a church was intitled to the right of patronage thereof, or *advocatio eccleſiæ*; whereby, among other privileges, he might preſent a churchman to the cure, in caſe of a vacancy. The preſentee, after he was received into the church, had a right to the benefice *proprio jure*; and if the church was parochial, he was called a *parſon*. The Pope claimed the right of patronage of every kirk to which no third party could ſhew a ſpecial title; and, ſince the reformation, the crown, as coming in place of the Pope, is conſidered as univerſal patron, where no right of patronage appears in a ſubject. Where two churches are united, which had different patrons, each patron preſents by turns.

6. Gentlemen of eſtates frequently founded colleges or collegiate churches; the head of which got the name of *provoſt*, under whom were certain prebendaries, or canons, who had their ſeveral ſtalls in the church, where they ſung maſſes. Others of leſſer fortunes founded chaplainries, which were donations granted for the ſinging of maſſes for deceaſed friends at particular altars in a church. Though all theſe were ſuppreſſed upon the reformation, their founders continued patrons of the endowments; out of which they were allowed to provide burſars, to be educated in any of the univerſities.

7. Where a fund is gifted for the eſtabliſhment of a ſecond miniſter in a pariſh where the cure is thought too heavy for one, the patronage of ſuch benefice does not belong to the donor, but to him who was patron of the church, unleſs either where the donor has reſerved to himſelf the right of patronage in the donation, or where he and his ſucceſſors have been in the conſtant uſe of preſenting the ſecond miniſter, without challenge from the patron. The right of preſenting incumbents was by 1690, *c.* 23. taken from patrons, and veſted in the heritors and elders of the pariſh, and payment to be made by the heritors to the patron of 600 merks; but it was again reſtored to patrons, 10 *An. c.* 12. with the exception of the preſentation ſold in purſuance of the former act.

Patrons.

8. Patrons were not ſimply adminiſtrators of the church; for they held the fruits of the vacant benefice as their own, for ſome time after the reformation. But that right is now no more than a truſt in the patron, who muſt apply them to pious uſes whithin the pariſh at the ſight of the heritors, yearly as they fall due. If he fail, he loſes his right of adminiſtering the vacant ſtipend for that and the next vacancy. The king, who is exempted from this rule, may apply the vacant ſtipend of his churches to any pious uſe, though not within the pariſh. If one ſhould be ordained to a church, in oppoſition to the preſentee, the patron, whoſe civil right cannot be affected by any ſentence of a church-court, may retain the ſtipend as vacant. Patrons are to this day intitled to a ſeat and burial-place in the churches of which they are patrons, and to the right of all the teinds of the pariſh not heritably diſponed.

9. That kirks may not continue too long vacant, the patron muſt preſent to the preſbytery (formerly to the biſhop), a fit perſon for ſupplying the cure, within ſix months from his knowledge of the vacancy, otherwiſe the right of preſentation accrues to the preſbytery *jure devoluto*. Upon preſentation by the patron, the biſhop collated or conferred the benefice upon the preſentee by a writing, in which he appointed certain miniſters of the dioceſe to induce or inſtitute him into the church; which induction completed his right, and was performed by their placing him in the pulpit, and delivering to him the bible and keys of the church. The biſhop collated to the churches of which himſelf was patron, *pleno jure*, or without preſentation; which he alſo did in menſal churches, whoſe patronages were ſunk, by the churches being appropriated to him, as part of his patrimony. Since the revolution, a judicial act of admiſſion by the preſbytery, proceeding either upon a preſentation, or upon a call from the heritors and elders, or upon their own *jus devolutum*, completes the miniſter's right to the benefice.

Proviſion for the reformed clergy.

10. Soon after the reformation, the Popiſh churchmen were prevailed upon to reſign in the ſoverign's hands a third of their benefices; which was appropriated, in the firſt place, for the ſubſiſtence of the reformed clergy. To make this fund effectual, particular localities were aſſigned in every benefice, to the extent of a third, called the *aſſumption of thirds*; and for the farther ſupport of miniſters, Queen Mary made a grant in their favour of all the ſmall benefices not exceeding 300 merks. Biſhops, by the act which reſtored them to the whole of their benefices, were obliged to maintain the miniſters within their dioceſes, out of the thirds; and in like maner, the laic titulars, who got grants of the teinds, became bound, by their acceptation thereof, to provide the kirks within their erections in competent ſtipends.

Commiſſion for planting kirks, valuing teinds, &c.

11. But all thoſe expedients for the maintenance of the clergy having proved ineffectual, a commiſſion of parliament was appointed in the reign of James VI. for planting kirks, and modifying ſtipends to miniſters out of the teinds; and afterwards ſeveral other commiſſions were appointed, with the more ample powers

of dividing large pariſhes, erecting new ones, &c. all of which were, in 1707, transferred to the court of ſeſſion, with this limitation, that no pariſh ſhould be disjoined, nor new church erected, nor old one removed to a new place, without the conſent of three-fourths of the heritors, computing the votes, not by their numbers, but by the valuation of their rents within the pariſh. The judges of ſeſſion, when ſitting in that court, are conſidered as a commiſſion of parliament, and have their proper clerks, macers, and other officers of court, as ſuch.

Stipends.

12. The loweſt ſtipend that could be modified to a miniſter by the firſt commiſſion, was 500 merks, or five chalders of victual, unleſs where the whole teinds of the pariſh did not extend ſo far: and the higheſt was 1000 merks, or ten chalders. The parliament 1633 raiſed the *minimum* to eight chalders of victual, and proportionably in ſilver; but as neither the commiſſion appointed by that act, nor any of the ſubſequent ones, was limited as to the *maximum*, the commiſſioners have been in uſe to augment ſtipends conſiderably above the old *maximum*, where there is ſufficiency of free teinds, and the cure is burdenſome, or living expenſive.

13. Where a certain quantity of ſtipend is modified to a miniſter out of the teinds of a pariſh, without proportioning that ſtipend among the ſeveral heritors, the decree is called a *decree of modification:* but where the commiſſioners alſo fix the particular proportions payable by each heritor, it is a decree of *modification and locality*. Where a ſtipend is only modified, it is ſecured on the whole teinds of the pariſh, ſo that the miniſter can inſiſt againſt any one heritor to the full extent of his teinds; ſuch heritor being always intitled to relief againſt the reſt for what he ſhall have paid above his juſt ſhare: but where the ſtipend is alſo localled, each heritor is liable in no more than his own proportion.

Manſe.

14. Few of the reformed miniſters were, at firſt, provided with dwelling-houſes; moſt of the Popiſh clergy having, upon the firſt appearance of the reformation, let their manſes in feu, or in long tack: miniſters therefore got a right, in 1563, to as much of theſe manſes as would ſerve them, notwithſtanding ſuch feus or tacks. Where there was no parſon's nor vicar's manſe, one was to be built by the heritors, at the ſight of the biſhop, (now the preſbytery), the charge not exceeding L. 1000 Scots, nor below 500 merks. Under a manſe are comprehended ſtable, barn, and byre, with a garden; for all which it is uſual to allow half an acre of ground.

15. Every incumbent is intitled at his entry to have his manſe put in good condition; for which purpoſe, the preſbtery may appoint a viſitation by tradeſmen, and order eſtimates to be laid before them of the ſums neceſſary for the repairing, which they may proportion among the heritors according to their valuations. The preſbytery, after the manſe is made ſufficient, ought, upon application of the heritors, to declare it a free manſe; which lays the incumbent under an obligation to uphold it in good condition during his incumbency, otherwiſe he or his executors ſhall be liable in damages; but they are not bound to make up the loſs ariſing from the neceſſary decay of the building by the waſte of time.

Glebe, and

16. All miniſters where there is any landward or country pariſh, are, over and above their ſtipend, intitled to a glebe, which comprehends four acres of arable land, or ſixteen ſowms of paſture-ground where there is no arable land (a ſowm is what will graze ten ſheep or one cow); and it is to be deſigned or marked by the biſhop or preſbytery out of ſuch kirklands within the pariſh as lie neareſt to the kirk, and, in default of kirklands, out of temporal lands.

17. A right of relief is competent to the heritors, whoſe lands are ſet off for the manſe or glebe, againſt the other heritors of the pariſh. Manſes and glebes, being once regularly deſigned, cannot be feued or ſold by the incumbent in prejudice of his ſucceſſors, which is in practice extended even to the caſe where ſuch alienation evidently apppears profitable to the benefice.

Graſs.

18. Miniſters, beſide their glebe, are intitled to graſs for a horſe and two cows. And if the lands, out of which the graſs may be deſigned, either lie at a diſtance, or are not fit for paſture, the heritors are to pay to the miniſter L. 20 Scots yearly as an equivalent. Miniſters have alſo freedom of foggage, paſturage, fuel, feal, divot, loaning, and free iſh and entry, according to uſe and wont: but what theſe privileges are, muſt be determined by the local cuſtom of the ſeveral pariſhes.

Terms of payment of ſtipends.

19. The legal terms at which ſtipends become due to miniſters are Whitſunday and Michaelmas. If the incumbent be admitted to his church before Whitſunday (till which time the corns are not preſumed to be fully ſown), he has a right to that whole year's ſtipend; and, if he is received after Whitſunday, and before Michaelmas, he is intitled to the half of that year; becauſe, though the corns were ſown before his entry, he was admitted before the term at which they are preſumed to be reaped. By the ſame reaſon, if he dies or is tranſported before Whitſunday, he has right to no part of that year; if before Michaelmas, to the half, and if not till after Michaelmas, to the whole.

Annat or ann.

20. After the miniſter's death, his executors have right to the annat; which, in the ſenſe of the cannon law, was a right reſerved to the Pope, of the firſt year's fruits of every benefice. Upon a threatened invaſion from England *anno* 1547, the annat was given by the parliament, notwithſtanding this right in the Pope, to the executors of ſuch churchmen as ſhould fall in battle in defence of their country: but the word *annat* or *ann*, as it is now underſtood, is the right which law gives to the executors of miniſters, of half a year's benefice over and above what was due to the miniſter himſelf for his incumbency.

21. The executors of a miniſter need make up no title to the ann by confirmation: neither is the right aſſignable by the miniſter, or affectable with his debts; for it never belonged to him, but is a mere gratuity given by law to thoſe whom it is preſumed the deceaſed could not ſufficiently provide; and law has given it expreſly to *executors:* and if it were to be governed by the rules of ſucceſſion in executory, the widow, in caſe of no children, would get one half, the other would go to the next of kin; and where there are children, ſhe would be intitled to a third, and the other two thirds would fall equally among the children. But the court of ſeſſion, probably led by the general

practice, have in this laſt caſe divided the ann into two equal parts, of which one goes to the widow, and the other among the children *in capita*.

Juriſdiction of biſhops.

22. From the great confidence that was, in the firſt ages of Chriſtianity, repoſed in churchmen, dying perſons frequently committed to them the care of their eſtates, and of their orphan children; but theſe were ſimply rights of truſt, not of juriſdiction. The clergy ſoon had the addreſs to eſtabliſh to themſelves a proper juriſdiction, not confined to points of eccleſiaſtical right, but extending to queſtions that had no concern with the church. They judged not only in teinds, patronages, teſtaments, breach of vow, ſcandal, &c. but in queſtions of marriage and divorce, becauſe marriage was a ſacrament; in tochers, becauſe theſe were given in conſideration of marriage: in all queſtions where an oath intervened, on pretence that oaths were a part of religious worſhip, &c. As churchmen came, by the means of this extenſive juriſdiction, to be diverted from their proper functions, they committed the exerciſe of it to their officials or commiſſaries: hence the commiſſary-court was called the *Biſhop's Court*, and *Curia Chriſtianitatis*; it was alſo ſtyled the *Conſiſtorial Court*; from *conſiſtory*, a name firſt given to the court of appeals of the Roman emperors, and afterwards to the courts of judicature held by churchmen.

Commiſſary.

23. At the reformation, all epiſcopal juriſdiction, exerciſed under the authority of the biſhop of Rome, was aboliſhed. As the courſe of juſtice in conſiſtorial cauſes was thereby ſtopped, Q. Mary, beſides naming a commiſſary for every dioceſe, did, by a ſpecial grant, eſtabliſh a new commiſſary-court at Edinburgh, conſiſting of four judges or commiſſaries. This court is veſted with a double juriſdiction; one dioceſan, which is exerciſed in the ſpecial territory contained in the grant, *viz.* the counties of Edinburgh, Haddington, Linlithgow, Peebles, and a great part of Stirlingſhire; and another univerſal, by which the judges confirm the teſtaments of all who die in foreign parts, and may reduce the decrees of all inferior commiſſaries, provided the reduction be purſued within a year after the decree. Biſhops, upon their re-eſtabliſhment in the reign of James VI. were reſtored to the right of naming their ſeveral commiſſaries.

24. As the clergy, in times of Popery, aſſumed a juriſdiction independent of the civil power or any ſecular court, their ſentences could be reviewed only by the Pope, or judges delegated by him; ſo that, with regard to the courts of Scotland, their juriſdiction was ſupreme. But, by an act 1560, the appeals from the biſhops courts that were then depending before the Roman conſiſtories, were ordained to be decided by the court of ſeſſion: and by a poſterior act, 1609, the ſeſſion is declared the king's great conſiſtory, with power to review all ſentences pronounced by the commiſſaries. Nevertheleſs, ſince that court had no inherent juriſdiction in conſiſtorial cauſes prior to this ſtatute, and ſince the ſtatute gives them a power of judging only by way of advocation, they have not, to this day, any proper conſiſtorial juriſdiction in the firſt inſtance; neither do they pronounce ſentence in any conſiſtorial cauſe brought from the commiſſaries, but remit it back to them with inſtructions. By the practice immediately ſubſequent to the act before quoted, they did not admit advocations from the inferior commiſſaries, till the cauſe was firſt brought before the commiſſaries of Edinburgh; but the practice is now in diſuſe.

25. The commiſſaries retain to this day an excluſive power of judging in declarators of marriage, and of the nullity of marriage; in actions of divorce and of non-adherence, of adultery, baſtardy, and confirmation of teſtaments; becauſe all theſe matters are ſtill conſidered to be properly conſiſtorial. Inferior commiſſaries are not competent to queſtions of divorce, under which are comprehended queſtions of baſtardy and adherence, when they have a connection with the lawfulneſs of marriage, or with adultery.

26. Commiſſaries have now no power to pronounce decrees in abſence for any ſum above L. 40 Scots, except in cauſes properly conſiſtorial: but they may authenticate tutorial and curatorial inventories; and all bonds, contracts, &c. which contain a clauſe for regiſtration in the books of any judge competent, and proteſts on bills, may be regiſtered in their books.

Sect. VI. *Of marriage.*

clx.

Mariage.

Persons, when conſidered in a private capacity, are chiefly diſtinguiſhed by their mutual relations; as huſband and wife, tutor and minor, father and child, maſter and ſervant. The relation of huſband and wife is conſtituted by marriage; which is the conjunction of man and wife, vowing to live inſeparably till death.

2. Marriage is truly a contract, and ſo requires the conſent of parties. Idiots, therefore, and furious perſons, cannot marry. As no perſon is preſumed capable of conſent within the years of pupillarity, which, by law, laſts till the age of 14 in males, and 12 in females, marriage cannot be contracted by pupils; but if the married pair ſhall cohabit after puberty, ſuch acquieſcence gives force to the marriage. Marriage is fully perfected by conſent; which, without conſummation, founds all the conjugal rights and duties. The conſent requiſite to marriage muſt be *de præſenti*. A promiſe of marriage (*ſtipulatio ſponſalitia*) may be reſiled from, as long as matters are entire; but if any thing be done by one of the parties, whereby a prejudice ariſes from the non-performance, the party reſiling is liable in damages to the other. The canoniſts, and after them the courts of juſtice, explain a *copula* ſubſequent to a promiſe of marriage into actual marriage.

Form of celebration.

3. It is not neceſſary, that marriage ſhould be celebrated by a clergyman. The conſent of parties may be declared before any magiſtate, or ſimply before witneſſes; and though no formal conſent ſhould appear, marriage is preſumed from the cohabitation, or living together at bed and board, of a man and woman who are generally computed huſband and wife. One's acknowledgement of his marriage to the midwife whom he called to his wife, and to the miniſter who baptized his child, was found ſufficient preſumptive evidence of marriage, without the aid either of cohabitation, or of *habite and repute*. The father's conſent was, by the Roman law, eſſential to the marriage of children *in familia*: but, by the law of Scotland, children may enter into marriage, without the knowledge, and even againſt the remonſtrances, of a father.

Forbidden degrees.

Other grounds of nullity.

4. Marriage is forbidden within certain degrees of blood. By the law of Moſes (*Leviticus* xviii.), which by the act 1567. c. 15. has been adopted here ſeconds in blood, and all remoter degrees, may all lawfully marry. By ſeconds in blood are meant firſt couſins. Marriage in the direct line is forbidden *in infinitum*; as it is alſo in the collateral line in the ſpecial caſe where one of the parties is *loco parentes* to the other, as grand-uncle, great grand-uncle, &c. with reſpect to his grand niece, &c. The ſame degrees that are prohibited in conſanguinity, are prohibited in affinity: which is the tie ariſing from marriage, betwixt one of the married pair, and the blood relations of the other. Marriage alſo, where either of the parties is naturally unfit for generation, or ſtands already married to a third perſon, is *ipſo jure* null.

Proclamation of banns.

5. To prevent bigamy and inceſtuous marriages, the church has introduced proclamation of banns; which is the ceremony of publiſhing the names and deſignations of thoſe who intend to intermarry, in the churches where the bride and bridegroom reſide, after the congregation is aſſembled for divine ſervice; that all perſons who know any objection to the marriage may offer it. When the order of the church is obſerved, the marriage is called *regular*; when otherwiſe, *clandeſtine*. Marriage is valid when entered into in either of theſe ways; but when clandeſtine, there are certain penalties impoſed upon the parties as well as the celebrator and witneſſes.

Communion of goods.

6. By marriage, a ſociety is created between the married pair, which draws after it a mutual communication of their civil intereſts, in as far as is neceſſary for maintaining it. As the ſociety laſts only for the joint lives of the *ſocii*; therefore rights that have the nature of a perpetuity, which the law ſtyles *heritable*, are not brought under the partnerſhip or communion of goods; as a land-eſtate, or bonds bearing a yearly intereſt: it is only moveable ſubjects, or the fruits produced by heritable ſubjects during the marriage, that become common to man and wife.

Jus mariti.

7. The huſband, as the head of the wife, has the ſole right of managing the goods in communion: which is called *jus mariti*. This right is ſo abſolute, that it bears but little reſemblance to a right of adminiſtering a common ſubject. For the huſband can, in virtue thereof, ſell, or even gift, at his pleaſure, the whole goods falling under communion; and his creditors may affect them for the payment of his proper debts: ſo that the *jus mariti* carries all the characters of an aſſignation, by the wife to her huſband, of her moveable eſtate. It ariſes *ipſo jure* from the marriage; and therefore needs no other conſtitution. But a ſtranger may convey an eſtate to a wife, ſo as it ſhall not be ſubject to the huſband's adminiſtration; or the huſband himſelf may, in the marriage-contract, renounce his *jus mariti* in all or any part of his wife's moveable eſtate.

Paraphernalia.

8. From this right are excepted paraphernal goods, which, as the word is underſtood in law, comprehends the wife's wearing apparel, and the ornaments proper to her perſon; as necklaces, ear-rings, breaſt or arm jewels, buckles, &c. Theſe are neither alienable by the huſband, nor affectable by his creditors. Things of promiſcuous uſe to huſband and wife, as plate, medals, &c. may become paraphernal, by the huſband's giving them to the wife, at or before marriage; but they are paraphernal only in regard to that huſband who gave them as ſuch, and are eſteemed common moveables, if the wife, whoſe *paraphernalia* they were, be afterwards married to a ſecond huſband; unleſs he ſhall in the ſame manner appropriate them to her.

Burdens affecting the *jus mariti*.

9. The right of the huſband to the wife's moveable eſtate, is burdened with the moveable debts contracted by her before marriage: and as his right is univerſal, ſo alſo is his burden; for it reaches to her whole moveable debts, though they ſhould far exceed her moveable eſtate. Yet the huſband is not conſidered as the true debtor in his wife's debts. In all actions for payment, ſhe is the proper defender: the huſband is only cited for his intereſt, that is, as curator to her, and adminiſtrator of the ſociety-goods. As ſoon therefore as the marriage is diſſolved, and the ſociety-goods thereby ſuffer a diviſion, the huſband is no farther concerned in the ſhare belonging to his deceaſed wife; and conſequently is no longer liable to pay her debts, which muſt be recovered from her repreſentatives, or her ſeparate eſtate.

How extended againſt the huſband.

10. This obligation upon the huſband is, however, perpetuated againſt him (1.) Where his proper eſtate, real or perſonal, has been affected, during the marriage, by complete legal diligence; in which caſe, the huſband muſt, by the common rules of law, relieve his property from the burden with which it ſtands charged: but the utmoſt diligence againſt his perſon is not ſufficient to perpetuate the obligation; nor even incomplete diligence againſt his eſtate. (2.) The huſband continues liable, even after the wife's death, in ſo far as he is *lucratus* or profited by her eſtate: Still, however, the law does not conſider a huſband who has got but a moderate tocher with the wife as *lucratus* by the marriage; it is the exceſs only which it conſiders as *lucrum*, and that muſt be eſtimated by the quality of the parties and their condition of life.—As he was at no time the proper debtor in his wife's moveable debts; therefore, though he ſhould be *lucratus*, he is, after the diſſolution, only liable for them *ſubſidiarie*, i. e. if her own ſeparate eſtate is not ſufficient to pay them off.

11. Where the wife is debtor in that ſort of debt, which, if it had been due to her, would have excluded the *jus mariti*, *e. g.* in bonds bearing intereſt, which, as we ſhall afterwards ſee (clxiii. 4.), continues heritable as to the rights of huſband and wife, notwithſtanding of the enactment of the ſtatute 1661, which renders them moveable in certain other reſpects, the huſband is liable only for the bygone intereſts, and thoſe that may grow upon the debt during the marriage; becauſe his obligation for her debts muſt be commenſurated to the intereſt he has in her eſtate. It is the huſband alone who is liable in perſonal diligence for his wife's debts, while the marriage ſubſiſts: the wife, who is the proper debtor, is free from all perſonal execution upon them while ſhe is *veſtita viro*.

The huſband is the wife's curator.

12. The huſband by marriage becomes the perpetual curator of the wife. From this right it ariſes, 1. That no ſuit can proceed againſt the wife till the huſband be cited for his intereſt. 2. All deeds, done by a wife without the huſband's conſent, are null; neither can ſhe ſue in any action without the huſband's

concurrence. Yet where the huſband refuſes, or by reaſon of forfeiture, &c. cannot concur; or where the action is to be brought againſt the huſband himſelf, for performing his part of the marriage articles; the judge will authoriſe her to ſue in her own name. The effects ariſing from this curatorial power diſcover themſelves even before marriage upon the publication of banns; after which the bride, being no longer *ſui juris*, can contract no debt, nor do any deed, either to the prejudice of her future huſband, nor even to her own. But in order to this, it is neceſſary that the banns ſhall have been publiſhed in the bride's pariſh-church as well as in that of her huſband.

Separate alimony.

13. If the huſband ſhould either withdraw from his wife, or turn her out of doors; or if, continuing in family with her, he ſhould by ſevere treatment endanger her life; the commiſſaries will authoriſe a ſeparation *a menſa et thoro*, and give a ſeparate alimony to the wife, ſuitable to her huſband's eſtate, from the time of ſuch ſeparation until either a reconciliation or a ſentence of divorce.

What obligations of the wife valid.

14. Certain obligations of the wife are valid, notwithſtanding her being *ſub cura mariti; ex. gr.* obligations ariſing from delict; for wives have no privilege to commit crimes. But if the puniſhment reſolves into a pecuniary mulct, the execution of it muſt, from her incapacity to fulfil, be ſuſpended till the diſſolution of the marriage, unleſs the wife has a ſeparate eſtate exempted from the *jus mariti*.

15. Obligations ariſing from contract, affect either the perſon or the eſtate. The law has been ſo careful to protect wives while *ſub cura mariti*, that all perſonal obligations granted by a wife, though with the huſband's conſent, as bonds, bills, &c. are null; with the following exceptions: (1.) Where the wife gets a ſeparate *peculium* or ſtock, either from her father or a ſtranger, for her own or her children's alimony, ſhe may grant perſonal obligations in relation to ſuch ſtock: and by ſtronger reaſon, perſonal obligations granted by a wife are good, when her perſon is actually withdrawn from the huſband's power by a judicial ſeparation. (2.) A wife's perſonal obligation, granted in the form of a deed *inter vivos*, is valid, if it is not to take effect till her death. (3.) Where the wife is by the huſband *præpoſita negotiis*, intruſted with the management either of a particular branch of buſineſs or of his whole affairs, all the contracts ſhe enters into in the exerciſe of her *præpoſitura* are effectual, even though they be not reduced to writing, but ſhould ariſe merely *ex re*, from furniſhings made to her: but ſuch obligations have no force againſt the wife; it is the huſband only, by whoſe commiſſion ſhe acts, who is thereby obliged.

16. A wife, while ſhe remains in family with her huſband, is conſidered as *præpoſita negotiis domeſticis*; and conſequently may provide things proper for the family; for the price whereof the huſband is liable, tho' they ſhould be miſapplied, or though the huſband ſhould have given her money to provide them elſewhere. A huſband who ſuſpects that his wife may hurt his fortune by high living, may uſe the remedy of inhibition againſt her; by which all perſons are interpelled from contracting with her, or giving her credit. After the completing of this diligence, whereby the *præpoſitura* falls, the wife cannot bind the huſband, unleſs for ſuch reaſonable furniſhings as he cannot inſtruct that he provided her with *aliunde*. As every man, and conſequently every huſband, has a right to remove his managers at pleaſure, inhibition may paſs at the ſuit of the huſband againſt the wife, though he ſhould not offer to juſtify that meaſure by an actual proof of the extravagance or profuſion of her temper.

Inhibition againſt a wife.

Rights affecting her eſtate.

17. As to rights granted by the wife affecting her eſtate; ſhe has no moveable eſtate, except her *paraphernalia*; and theſe ſhe may alien or impignorate, with conſent of the huſband. She can, without the huſband, bequeath by teſtament her ſhare of the goods in communion; but ſhe cannot diſpoſe of them *inter vivos*; for ſhe herſelf has no proper right to them while the marriage ſubſiſts. A wife can lawfully oblige herſelf, in relation to her heritable eſtate, with conſent of her huſband: for though her perſon is in ſome ſenſe ſunk by the marriage, ſhe continues capable of holding a real eſtate; and in ſuch obligations her eſtate is conſidered, and not her perſon. A huſband, though he be curator to his wife, can by his acceptance or intervention, authoriſe rights granted by her in his own favour: for a huſband's curatory differs in this reſpect from the curatory of minors, for it is not merely intended for the wife's advantage, but is conſidered as a mutual benefit to both.

Donations revocable and irrevocable.

18. All donations, whether by the wife to the huſband, or by the huſband to the wife, are revocable by the donor; but if the donor dies without revocation, the right becomes abſolute. Where the donation is not pure, it is not ſubject to revocation: thus, a grant made by the huſband, in conſequence of the natural obligation that lies upon him to provide for his wife, is not revocable, unleſs in ſo far as it exceeds the meaſure of a rational ſettlement; neither are remuneratory grants revocable, where mutual grants are made in conſideration of each other, except where an onerous cauſe is ſimulated, or where what is given *hinc inde* bears no proportion to each other. All voluntary contracts of ſeparation, by which the wife is provided in an yearly alimony, are effectual as to the time paſt, but revocable either by the huſband or wife.

Ratification by wives.

19. As wives are in the ſtrongeſt degree ſubject to the influence of their huſbands, third parties, in whoſe favours they had made grants, were frequently vexed with actions of reduction, as if the grant had been extorted from the wife through the force or fear of the huſband. To ſecure the grantees againſt this danger, ratifications were introduced, whereby the wife, appearing before a judge, declares upon oath, her huſband not preſent, that ſhe was not induced to grant the deed *ex vi aut metu*. A wife's ratification is not abſolutely neceſſary for ſecuring the grantee: law indeed allows the wife to bring reduction of any deed ſhe has not ratified, upon the head of force or fear; of which, if ſhe bring ſufficient evidence, the deed will be ſet aſide; but if ſhe fails in the proof, it will remain effectual to the receiver.

Diſſolution of marriage.

20. Marriage, like other contracts, might, by the Roman law, be diſſolved by the contrary conſent of parties; but, by the law of Scotland, it cannot be diſſolved till death, except by divorce, proceeding either upon the head of adultery or of wilful deſertion.

21. Marriage is diſſolved by death, either *within* year and day from its being contracted, or *after* year

and day. If it is diſſolved within year and day, all rights granted in conſideration of the marriage (unleſs guarded againſt in the contract) become void, and things return to the ſame condition in which they ſtood before the marriage; with this reſtriction, that the huſband is conſidered as a *bona ſide* poſſeſſor, in relation to what he has conſumed upon the faith of his right; but he is liable to repay the tocher, without any deduction, in conſideration of his family-expence during the marriage. If things cannot be reſtored on both ſides, equity hinders the reſtoring of one party and not the other. In a caſe which was lately before the court of ſeſſion, it was determined, after a long hearing in preſence, that where a marriage had been diſſolved within the year without a living child, by the death of the huſband, the widow was intitled to be alimented out of an eſtate of which he died poſſeſſed, though there were no conventional proviſions ſtipulated in favour of the wife.

22. Upon the diſſolution of a marriage, after year and day, the ſurviving huſband becomes the irrevocable proprietor of the tocher; and the wife, when ſhe ſurvives, is intitled to her jointure, or to her legal proviſions. She has alſo right to mournings, ſuitable to the huſband's quality; and to alimony from the day of his death till the term at which her liferent proviſion, either legal or conventional, commences. If a living child be procreated of the marriage, the marriage has the ſame effect as if it had ſubſiſted beyond the year. A day is adjected to the year, *in majorem evidentiam*, that it may clearly appear that the year itſelf is elapſed; and therefore, the running of any part of the day, after the year, has the ſame effect as if the whole were elapſed. The legal right of courteſy competent to the ſurviving huſband is explained below, N° clxx. 28.

Divorce.

23. Divorce is ſuch a ſeparation of married perſons, during their lives, as looſes them from the nuptial tie, and leaves them at freedom to intermarry with others. But neither adultery, nor wilful deſertion, are grounds which muſt neceſſarily diſſolve marriage; they are only handles, which the injured party may take hold of to be free. Cohabitation, therefore, by the injured party, after being in the knowledge of the acts of adultery, inplies a paſſing from the injury; and no divorce can proceed, which is carried on by colluſion betwixt the parties leſt contrary to the firſt inſtitution of marriage, they might diſengage themſelves by their own conſent, and though, after divorce, the guilty perſon, as well as the innocent, may contract ſecond marriages; yet, in the caſe of divorce upon adultery, marriage is by ſpecial ſtatute (1600. c 20.) prohibited betwixt the two adulterers.

24. Where either party has deſerted from the other for four years together, that other may ſue for adherence. If this has no effect, the church is to proceed, firſt by admonition, then by excommunication; all which previous ſteps are declared to be a ſufficient ground for purſuing a divorce. *De praxi*, the commiſſaries pronounce ſentence in the adherence, after one year's deſertion; but four years muſt intervene between the firſt deſertion and the decree of divorce.

25. The legal effects of divorce on the head of deſertion are, that the offending huſband ſhall reſtore the tocher, and forfeit to the wife all her proviſions, legal and conventional; and, on the other hand, the offending wife ſhall forfeit to the huſband her tocher, and all the rights that would have belonged to her in the caſe of her ſurvivance. This was alſo eſteemed the rule in divorces upon adultery. But by a deciſion of the court of ſeſſion 1662, founded on a tract of ancient deciſions recovered from the records, the offending huſband was allowed to retain the tocher.

SECT. VII. *Of Minors, and their tutors and curators.* clxi.

Pupillarity, &c.

1. THE ſtages of life principally diſtinguiſhed in law are, *pupillarity*, *puberty* or *minority*, and *majority*. A child is under pupillarity, from the birth to 14 years of age if a male, and till 12 if a female. Minority begins where pupillarity ends, and continues till majority; which, by the law of Scotland, is the age of 21 years complete, both in males and females: but minority, in a large ſenſe, includes all under age, whether pupils or *puberes*. Becauſe pupils cannot in any degree act for themſelves, and minors ſeldom with diſcretion, pupils are put by law under the power of tutors, and minors may put themſelves under the direction of curators. Tutory is a power and faculty to govern the perſon, and adminiſter the eſtate, of a pupil. Tutors are either *nominate*, *of law*, or *dative*.

Tutors.

2. A tutor nominate is he who is named by a father, in his teſtament or other writing, to a lawful child. Such tutor is not obliged to give caution for the faithful diſcharge of his office; becauſe his fidelity is preſumed to have been ſufficiently known to the father.

3. If there be no nomination by the father, or if the tutors nominate do not accept, or if the nomination falls by death or otherwiſe, there is place for a *tutor of law*. This ſort of tutory devolves upon the next agnate; by which we underſtand he who is neareſt related by the father, though females intervene.

Agnates.

4. Where there are two or more agnates equally near to the pupil, he who is intitled to the pupil's legal ſucceſſion falls to be preferred to the others. But as the law ſuſpects that he may not be over careful to preſerve a life which ſtands in the way of his own intereſt, this ſort of tutor is excluded from the cuſtody of the pupil's perſon; which is commonly committed to the mother, while a widow, until the pupil be ſeven years old; and, in default of the mother, to the next cognate, i. e. the nigheſt relation by the mother. The tutor of law muſt (by act 1474) be at leaſt 25 years of age. He is ſerved or declared by a jury of ſworn men, who are called upon a brief iſſuing from the chancery, which is directed to any judge having juriſdiction. He muſt give ſecurity before he enters upon the management.

5. If no tutor of law demands the office, any perſon, even a ſtranger, may apply for a tutory-*dative*. But becauſe a tutor in law ought to be allowed a competent time to deliberate whether he will ſerve or not, no tutory-dative can be given till the elapſing of a year from the time at which the tutor of law had firſt a right to ſerve. It is the king alone, as the father of his country, who gives tutors dative, by his court of exchequer; and by act 1672, no gift of tutory can paſs in exchequer, without the citation or conſent of

the next of kin to the pupil, both by the father and mother, nor till the tutor give ſecurity, recorded in the books of exchequer. There is no room for a tutor of law, or tutor-dative, while a tutor-nominate can be hoped for: and tutors of law, or dative, even after they have begun to act, may be excluded by the tutor-nominate, as ſoon as he offers to accept, unleſs he has expreſsly renounced the office. If a pupil be without tutors of any kind, the court of ſeſſion will, at the ſuit of any kinſman, name a factor (ſteward) for the management of the pupil's eſtate.

Judicial factor.

Curators.

6. After the years of pupillarity are over, the minor is conſidered as capable of acting by himſelf, if he has confidence enough of his own capacity and prudence. The only two caſes in which curators are impoſed upon minors are, (1.) Where they are named by the father, in a ſtate of health. (2.) Where the father is himſelf alive; for a father is *ipſo jure*, without any ſervice, adminiſtrator, that is, both tutor and curator of law, to his children, in relation to whatever eſtate may fall to them during their minority. This right in the father does not extend to grandchildren, nor to ſuch even of his immediate children as are foriſfamiliated. Neither has it place in ſubjects which are left by a ſtranger to the minor, excluſive of the father's adminiſtration. If the minor chooſes to be under the direction of curators, he muſt raiſe and execute a ſummons, citing at leaſt two of his next of kin to appear before his own judge-ordinary, upon nine days warning (by act 1555.) At the day and place of appearance, he offers to the judge a liſt of thoſe whom he intends for his curators: ſuch of them as reſolve to undertake the office muſt ſign their acceptance, and give caution; upon which an act of curatory is extracted.

7. Theſe curators are ſtyled *ad negotia*; to diſtinguiſh them from another ſort called curators *ad lites*; who are authoriſed by the judge to concur with a pupil or minor in actions of law, either where he is without tutors and curators, or where his tutors and curators are parties to the ſuit. This ſort is not obliged to give caution, becauſe they have no intermeddling with the minor's eſtate: they are appointed for a ſpecial purpoſe; and when that is over, their office is at an end. Women are capable of being tutors and curators under the following reſtrictions: (1.) The office of a female tutor or curator falls by her marriage, even though the nomination ſhould provide otherwiſe; for ſhe is no longer *ſui juris*, and capable of courſe of having another under her power. (2.) No woman can be tutor of law. Papiſts are (by act 1700) declared incapable of tutory or curatory. Where the minor has more tutors and curators than one, who are called in the nomination to the *joint* management, they muſt *all* concur in every act of adminiſtration; where a certain number is named for a quorum, *that number* muſt concur: where any one is named *ſine quo non*, no act is valid without that one's ſpecial concurrence. But if they are named without any of theſe limitations, the concurrence of *the majority* of nominees then alive is ſufficient.

Who debarred from tutory and curatory.

Difference between tutory and curatory.

8. In this, tutory differs from curatory, that as pupils are incapable of conſent, they have no perſon capable of acting; which defect the tutor ſupplies: but a minor *pubes* can act for himſelf. Hence, the tutor ſubſcribes alone all deeds of adminiſtration: but in curatory, it is the minor who ſubcribes as the proper party; the curator does no more than conſent. Hence alſo, the perſons of pupils are under the power either of their tutors or of their neareſt cognates; but the minor, after pupillarity, has the diſpoſal of his own perſon, and may reſide where he pleaſes In moſt other particulars, the nature, the powers, and the duties of the two offices coincide. Both tutors and curators muſt, previous to their adminiſtration, make a judicial inventory, ſubſcribed by them and the next of kin, before the minor's judge-ordinary, of his whole eſtate perſonal and real; of which, one ſubſcribed duplicate is to be kept by the tutors or curators themſelves; another, by the next of kin on the father's ſide; and a third, by the next of kin on the mother's. If any eſtate belonging to the minor ſhall afterwards come to their knowledge, they muſt add it to the inventory within two months after their attaining poſſeſſion thereof. Should they neglect this the minor's debtors are not obliged to make payment to them: they may be removed from their offices as ſuſpected; and they are intitled to no allowance for the ſums diſburſed by them in the minors affairs (act 1672), except the expence laid out upon the minor's entertainment, upon his lands and houſes, and upon compleating his titles.

Judicial inventories.

Powers of tutors and curators.

9. Tutors and curators cannot grant leaſes of the minor's lands, to endure longer than their own offices; nor under the former rental, without either a warrant from the court of ſeſſion, or ſome apparent neceſſity.

10. They have power to ſell the minor's moveables; but cannot ſell their pupil's land-eſtate, without the authority of a judge, yet this reſtraint reaches not to ſuch alienations as the pupil could by law be compelled to grant, *e. g.* to renunciations of wadſets upon redemption by the reverſer; for in ſuch caſe, the very tenor of his own right lays him under the obligation; nor to the renewal of charters to heirs; but the charter muſt contain no new right in favour of the heir. The alienation, however, of heritage by a minor with the conſent of his curators, is valid.

11. Tutors and curators cannot, contrary to the nature of their truſt, authoriſe the minor to do any deed for their own benefit; nor can they acquire any debt affecting the minor's eſtate; and, where a tutor or curator makes ſuch accquiſition, in his own name, for a leſs ſum than the right is intitled to draw, the benefit thereof accrues to the minor. It ſeems, however, that ſuch purchaſe would be conſidered as valid, provided it were *bona fide* acquired at a public ſale; for in ſuch caſe it occurs that the tutor or curator is in fact meliorating the ſituation of his ward by enhancing the value of his property by a fair competition. In general, it ſeems to be the genius and ſpirit of the law, that tutors and curators ſhall do every thing in their power towards the faithful and proper diſcharge of their reſpective offices.

Their obligations.

12. By the Roman law, tutory and curatory, being *munera publica*, might be forced upon every one who had not a relevant ground of excuſe: but, with us, the perſons named to theſe offices may either accept or decline: and where a father, in *liege pouſti* (when in a ſtate of health), names certain perſons both as tutors aud curators to his children, though they have acted

as tutors, they may decline the office of curatory. Tutors and curators having once accepted, are liable *in diligence*, that is, are accountable for the conſequences of their neglect in any part of their duty from the time of their acceptance. They are accountable *ſinguli in ſolidum*, i. e. every one of them is anſwerable, not only for his own diligence, but for that of his co-tutors; and any one may be ſued without citing the reſt; but he who is condemned in the whole, has action of relief againſt his co-tutors.

13. From this obligation to diligence, we may except, (1.) Fathers or adminiſtrators in law, who, from the preſumption that they act to the beſt of their power for their children, are liable only for actual intromiſſions. (2.) Tutors and curators named by the father in conſequence of the act 1696, with the ſpecial proviſos, that they ſhall be liable barely for intromiſſions, not for omiſſions; and that each of them ſhall be liable only for himſelf, and not *in ſolidum* for the co-tutors: but this power of exemption from diligence is limited to the eſtate deſcending from the father himſelf. Tutors or curators are not intitled to any ſalary or allowance for pains, unleſs a ſalary has been expreſsly contained in the teſtator's nomination; for their office is preſumed gratuitous.

14. Though no perſon is obliged to accept the office of tutor or curator; yet having once accepted, he cannot throw it up or renounce it without ſufficient cauſe; but, if he ſhould be guilty of miſapplying the minor's money, or fail in any other part of his duty, he may be removed at the ſuit of the minor's next in kin, or by a co-tutor or co-curator. Where the miſconduct proceeds merely from indolence or inattention, the court, in place of removing the tutor, either join a curator with him, or, if he be a tutor nominate, they oblige him to give caution for his paſt and future management

How tutory and curatory expire.

15. The offices of tutory and curatory expire alſo by the pupil's attaining the age of puberty, or the minor's attaining the age of 21 years complete; and by the death either of the minor, or of his tutor and curator. Curatory alſo expires by the marriage of a female minor, who becomes thereby under the coverture of her own huſband. After expiry of the office, reciprocal actions lie at the inſtance both of the tutors and curators, and of the minor. That at the inſtance of the minor is called *actio tutelæ directa*, by which he can compel the tutors to account; that at the inſtance of the tutors, *actio tutelæ contraria*, by which the minor can be compelled to repay what has been profitably expended during the adminiſtration: but this laſt does not lie till after accounting to the minor; for till then the tutors are preſumed *intus habere* to have effects in their own hands for anſwering their diſburſements.

Effect of deeds by minors.

16. Deeds either by pupils, or by minors having curators without their conſent, are null; but they oblige the granters, in as far as relates to ſums profitably applied to their uſe. A minor under curators can indeed make a teſtament by himſelf; but whatever is executed in the form of a deed *inter vivos*, requires the curator's conſent. Deeds by a minor who has no curators, are as effectual as if he had had curators, and ſigned them with their conſent; he may even alien his heritage, without the interpoſition of a judge.

Reſtitution.

17. Minors may be reſtored againſt all deeds granted in their minority, that are hurtful to them. Deeds, in themſelves void, need not the remedy of reſtitution; but where hurtful deeds are granted by a tutor in his pupil's affairs, or by a minor who has no curators, as theſe deeds ſubſiſt in law, reſtitution is neceſſary: and even where a minor, having curators, executes a deed hurtful to himſelf with their conſent, he has not only action againſt the curators, but he has the benefit of reſtitution againſt the deed itſelf. The minor cannot be reſtored, if he does not raiſe and execute a ſummons for reducing the deed, *ex capite minorennitatis et læſionis*, before he be 25 years old. Theſe four years, between the age of 21 and 25, called *quadriennium utile*, are indulged to the minor, that he may have a reaſonable time, from that period, when he is firſt preſumed to have the perfect uſe of his reaſon, to conſider with himſelf what deeds done in his minority have been truly prejudicial to him.

Its requiſites.

18. Queſtions of reſtitution are proper to the court of ſeſſion. Two things muſt be proved by the minor, in order to the reduction of the deed: (1.) That he was minor when it was ſigned; (2.) That he is hurt or leſed by the deed. This leſion muſt not proceed merely from accident; for the privilege of reſtitution was not intended to exempt minors from the common misfortunes of life; it muſt be owing to the imprudence or negligence of the minor, or his curator.

How excluded.

19. A minor cannot be reſtored againſt his own delict or fraud; *e. g.* if he ſhould induce one to bargain with him by ſaying he was major. (2.) Reſtitution is excluded, if the minor, at any time after majority, has approved of the deed, either by a formal ratification, or tacitly by payment of intereſt, or by other acts inferring approbation. (3.) A minor, who has taken himſelf to buſineſs, as a merchant-ſhopkeeper, &c. cannot be reſtored againſt any deed granted by him in the courſe of that buſineſs, eſpecially if he was *proximus majorennitati* at ſigning the deed. (4.) According to the more common opinion, a minor cannot be reſtored in a queſtion againſt a minor, unleſs ſome groſs unfairneſs ſhall be qualified in the bargain.

How tranſmitted to the heir.

20. The privilege of reſtitution does not always die with the minor himſelf. (1.) If a minor ſucceeds to a minor, the time allowed for reſtitution is governed by the minority of the heir, not of the anceſtor. (2.) If a minor ſucceeds to a major, who was not full 25, the privilege continues with the heir during his minority; but he cannot avail himſelf of the *anni utiles*, except in ſo far as they were unexpired at the anceſtor's death. (3.) If a major ſucceeds to a minor, he has only the *quadriennium utile* after the minor's death; and if he ſucceeds to a major dying within the *quadriennium*, no more of it can be profitable to him than what remained when the anceſtor died.

Minor non tenetur placitare.

21. No minor can be compelled to ſtate himſelf as a defender, in any action, whereby his heritable eſtate flowing from aſcendants may be evicted from him, by one pretending a preferable right.

22. This privilege is intended merely to ſave minors from the neceſſity of diſputing upon queſtions of preference. It does not therefore take place, (1.) where the action is purſued on the father's falſehood or delict. (2.) Upon his obligation to convey heritage. (3.) On his liquid bond for a ſum of money, though ſuch action ſhould have the effect to carry off the minor's

eſtate by adjudication. (4.) Nor in actions purſued by the minor's ſuperior, upon feudal caſualties. (5.) This privilege cannot be pleaded in bar of an action which had been firſt brought againſt the father, and is only continued againſt the minor; nor where the father was not in the peaceable poſſeſſion of the heritable ſubject at his death. Before the minor can plead it, he muſt be ſerved heir to his father. The perſons of pupils are by ſaid act 1696 protected from impriſonment on civil debts.

Curators of idiots and furious perſons.

23. Curators are given, not only to minors, but in general to every one who, either through defect of judgment, or unfitneſs of diſpoſition, is incapable of rightly managing his own affairs. Of the firſt ſort, are idiots and furious perſons. Idiots, or *fatui*, are entirely deprived of the faculty of reaſon. The diſtemper of the furious perſon does not conſiſt in the defect of reaſon; but in an overheated imagination, which obſtructs the application of reaſon to the purpoſes of life. Curators may be alſo granted to lunatics; and even to perſons dumb and deaf, though they are of ſound judgement, where it appears that they cannot exert it in the management of buſineſs. Every perſon, who is come of age, and is capable of acting rationally, has a natural right to conduct his own affairs. The only regular way, therefore, of appointing this ſort of curators, is by a jury ſummoned upon a brief from the chancery; which is not, like the brief of common tutory, directed to any judge-ordinary, but to the judge of the ſpecial territory where the perſon alleged to be fatuous or furious reſides; that, if he is truly of ſound judgement, he may have an opportunity to oppoſe it: and for this reaſon, he ought to be made a party to the brief. The curatory of idiots and furious perſons belongs to the neareſt agnate; but a father is preferred to the curatory of his fatuous ſon, and the huſband to that of his fatuous wife, before the agnate.

24. A clauſe is inſerted in the brief, for inquiring how long the fatuous or furious perſon has been in that condition; and the verdict to be pronounced by the inqueſt has a retroſpective effect; for it is declared a ſufficient ground, without further evidence, for reducing all deeds granted after the period at which it appeared by the proof that the fatuity or furioſity began. But, as fatuous and furious perſons are, by their very ſtate, incapable of being obliged, all deeds done by them may be declared void, upon proper evidence of their fatuity at the time of ſigning, though they ſhould never have been cognoſced idiots by an inqueſt.

25. We have ſome few inſtances of the ſovereign's giving curators to idiots, where the next agnate did not claim; but ſuch gifts are truly deviations from the law, ſince they paſs without any inquiry into the ſtate of the perſon upon whom the curatory is impoſed. Hence the curator of law to an idiot, ſerving *quandocunque*, is preferred, as ſoon as he offers himſelf, before the curator-dative. This ſort of curatory does not determine by the lucid intervals of the perſon *ſub cura;* but it expires by his death, or perfect return to a ſound judgement; which laſt ought regularly to be declared by the ſentence of a judge.

Interdiction.

26. Perſons, let them be ever ſo profuſe, or liable to be impoſed upon, if they have the exerciſe of reaſon, can effectually oblige themſelves, till they are fettered by law. This may be done by *Interdiction*, which is a legal reſtraint laid upon ſuch perſons from ſigning any deed to their own prejudice, without the conſent of their curators or interdictors.

27. There could be no interdiction, by the ancient practice, without a previous inquiry into the perſon's condition. But as there were few who could bear the ſhame that attends judicial interdiction, however neceſſary the reſtraint might have been, voluntary interdiction has received the countenance of law; which is generally executed in the form of a bond, whereby the granter obliges himſelf to do no deed that may affect his eſtate, without the conſent of certain friends therein mentioned. Though the reaſons inductive of the bond ſhould be but gently touched in the recital, the interdiction ſtands good. Voluntary interdiction, tho' it be impoſed by the ſole act of the perſon interdicted, cannot be recalled at his pleaſure: but it may be taken off, (1.) By a ſentence of the court of ſeſſion, declaring, either that there was, from the beginning, no ſufficient ground for the reſtraint; or that the party is, ſince the date of the bond, become *rei ſui providus.* (2.) It falls, even without the authority of the lords, by the joint act of the perſon interdicted, and his interdictors, concurring to take it off. (3.) Where the bond of interdiction requires a certain number as a quorum, the reſtraint ceaſes, if the interdictors ſhall by death be reduced to a leſſer number.

28. Judicial interdiction is impoſed by a ſentence of the court of ſeſſion. It commonly proceeds on an action brought by a near kinſman to the party; and ſometimes from the *nobile officium* or the court, when they perceive, during the pendency of a ſuit, that any of the litigants is, from the facility of his temper, ſubject to impoſition. This ſort muſt be taken off by the authority of the ſame court that impoſed it.

Regiſtration of interdictions.

29. An interdiction need not be ſerved againſt the perſon interdicted; but it muſt be executed, or publiſhed by a meſſenger, at the market croſs of the juriſdiction where he reſides, by publicly reading the interdiction there, after three oyeſſes made for convocating the lieges. A copy of this execution muſt be affixed to the croſs; and thereafter, the interdiction, with its execution, muſt (by the act 1581) be regiſtered in the books both of the juriſdiction where the perſon interdicted reſides and where his lands lie, or (by the act 1600) in the general regiſter of the ſeſſion, within 40 days from the publication. An interdiction, before it is regiſtered, has no effect againſt third parties, tho' they ſhould be in the private knowledge of it; but it operates againſt the interdictors themſelves, as ſoon as it is delivered to them.

Effects.

30. An interdiction, duly regiſtered, has this effect, that all deeds done thereafter, by the perſon interdicted, without the conſent of his interdictors, affecting his heritable eſtate, are ſubject to reduction. Regiſtration in the general regiſter ſecures all his lands from alienation, wherever they lie; but where the interdiction is recorded in the regiſter of a particular ſhire, it covers no lands except thoſe ſituated in that ſhire. But perſons interdicted have full power to diſpoſe of their moveables, not only by teſtament, but by preſent deeds of alienation: And creditors, in perſonal bonds granted after interdiction, may uſe all execution againſt their debtor's perſon and moveable eſtate: ſuch bonds being only ſubject to reduction in ſo far as di-

ligence againſt the heritable eſtate may proceed upon them.

31. All onerous or rational deeds granted by the perſon interdicted, are as effectual, even without the conſent of the interdictors, as if the granter had been laid under no reſtraint; but he cannot alter the ſucceſſion of his heritable eſtate, by any ſettlement, let it be ever ſo rational. No deed, granted with conſent of the interdictors, is reducible, though the ſtrongeſt leſion or prejudice to the granter ſhould appear: the only remedy competent, in ſuch caſe, is an action by the granter againſt his interdictors, for making up to him what he has loſt through their undue conſent. It is no part of the duty of interdictors, to receive ſums or manage any eſtate; they are given merely *ad auctoritatem præſtandam*, to interpoſe their authority to reaſonable deeds: and ſo are accountable for nothing but their fraud or fault, in conſenting to deeds hurtful to the perſon under their care.

Office of interdictors.

Lawful children.

32. The law concerning the ſtate of children falls next to be explained. Children are either born in wedlock, or out of it. All children born in lawful marriage or wedlock, are preſumed to be begotten by the perſon to whom the woman is married: and conſequently to be lawful children. This preſumption is ſo ſtrongly founded, that it cannot be defeated but by direct evidence that the mother's huſband could not be the father of the child, *e. g.* where he is impotent, or was abſent from the wife till within ſix lunar months of the birth. The canoniſts indeed maintain, that the concurring teſtimony of the huſband and wife, that the child was not procreated by the huſband, is ſufficient to elude this legal preſumption for legitimacy: but it is an agreed point, that no regard is to be paid to ſuch teſtimony, if it be made after they have owned the child to be theirs. A father has the abſolute right of diſpoſing of his childrens perſon, of directing their education, and of moderate chaſtiſement; and even after they become *puberes*, he may compel them to live in family with him, and to contribute their labour and induſtry, while they continue there, towards his ſervice. A child who gets a ſeparate ſtock from the father for carrying on any trade or employment, even though he ſhould continue in the father's houſe, may be ſaid to be emancipated or forisfamiliated, in ſo far as concerns that ſtock; for the profits ariſing from it are his own. Forisfamiliation, when taken in this ſenſe, is alſo inferred by the child's marriage, or by his living in a ſeparate houſe, with his father's permiſſion or good-will. Children, after their full age of twenty-one years, become according to the general opinion, their own maſters; and from that period are bound to the father only by the natural ties of duty, affection, and gratitude. The mutual obligations between parents and children to maintain each other, are explained afterwards, N° clxxii. 4.

Baſtards.

33. Children born out of wedlock, are ſtyled natural children, or baſtards. Baſtards may be legitimated or made lawful, (1.) By the ſubſequent intermarriage of the mother of the child with the father. And this ſort of legitimation intitles the child to all the rights of lawful children. The ſubſequent marriage, which produces legitimation, is conſidered by the law to have been entered into when the child legitimated was begotten; and hence, if it be a male, he excludes, by his right of primogeniture, the ſons procreated after the marriage, from the ſucceſſion of the father's heritage, though theſe ſons were lawful children from the birth. Hence, alſo, thoſe children only can be thus legitimated, who are begotten of a woman whom the father might at that period have lawfully married. (2.) Baſtards are legitimated by letters of legitimation from the ſovereign. N° clxxxii. 3.

Servants.

34. As to the powers of maſters over their ſervants: All ſervants now enjoy the ſame rights and privileges with other ſubjects, unleſs in ſo far as they are tied down by their engagements of ſervice. Servants are either neceſſary or voluntary. Neceſſary are thoſe whom law obliges to work without wages, of whom immediately. Voluntary ſervants engage without compulſion, either for mere ſubſiſtence, or alſo for wages. Thoſe who earn their bread in this way, if they ſhould ſtand off from engaging, may be compelled to it by the juſtices of the peace, who have power to fix the rate of their wages.

Colliers and ſalters.

35. Colliers, coal-bearers, ſalters, and other perſons neceſſary to collieries and ſalt-works, as they are particularly deſcribed by act 1661, were formerly tied down to perpetual ſervice at the works to which they had once entered. Upon a ſale of the works, the right of their ſervice was transferred to the new proprietor. All perſons were prohibited to receive them into their ſervice, without a teſtimonial from their laſt maſter; and if they deſerted to another work, and were redemanded within a year thereafter, he who had received them was obliged to return them within twenty-four hours, under a penalty. But though the proprietor ſhould neglect to require the deſerter within the year, he did not, by that ſhort preſcription, loſe his property in him. Colliers, &c. where the colliery to which they were reſtricted was either given up, or not ſufficient for their maintenance, might lawfully engage with others; but if that work ſhould be again ſet a-going, the proprietor might reclaim them back to it.

Reſtraints lately taken off.

36. But by 15 *Geo.* III. *c.* 28. theſe reſtraints, the only remaining veſtiges of ſlavery in the law of Scotland, are abrogated; and, after the 1ſt July 1775, all colliers, coal-bearers, and ſalters, are declared to be upon the ſame footing with other ſervants or labourers. The act ſubjects thoſe who were bound prior to the 1ſt July 1775, to a certain number of years ſervice for their freedom, according to the age of the perſon.

The poor.

37. The poor make the loweſt claſs or order of perſons. Indigent children may be compelled to ſerve any of the king's ſubjects without wages, till their age of thirty years. Vagrants and ſturdy beggars may be alſo compelled to ſerve any manufacturer. And becauſe few perſons were willing to receive them into their ſervice, public work-houſes are ordained to be built for ſetting them to work. The poor who cannot work, muſt be maintained by the pariſhes in which they were born; and where the place of their nativity is not known, that burden falls upon the pariſhes where they have had their moſt common reſort, for the three years immediately preceding their being apprehended or their applying for the public charity. Where the contributions collected at the churches to which they belong are not ſufficient for their maintenance, they are

to receive badges from the miniſter and kirk-ſeſſion, in virtue of which they may aſk alms at the dwelling houſes of the inhabitants of the pariſh.

CHAP. II.

Of THINGS.

THE things, or ſubjects, to which perſons have right, are the ſecond object of law.

clxii. SECT. I. *Of the diviſion of rights, and the ſeveral ways by which a right may be acquired.*

Property.

THE right of enjoying and diſpoſing of a ſubject at one's pleaſure, is called property. Proprietors are reſtrained by law from uſing their property emulouſly to their neighbour's prejudice. Every ſtate or ſovereign has a power over private property, called, by ſome lawyers, *dominium eminens*, in virtue of which, the proprietor may be compelled to ſell his property for an adequate price, where an evident utility on the part of the public demands it.

Things incapable of appropriation.

2. Certain things are by nature itſelf incapable of appropriation; as the air, the light, the ocean, &c.: none of which can be brought under the power of any one perſon, though their uſe be common to all. Others are by law exempted from private commerce, in reſpect of the uſes to which they are deſtined. Of this laſt kind are (1.) *Res publicæ*, as navigable rivers, highways, bridges, &c.: the right of which is veſted in the king, chiefly for the benefit of his people, and they are called *regalia*. (2.) *Res univerſitatis*, things which belong in property to a particular corporation or ſociety, and whoſe uſe is common to every individual in it, but both property and uſe are ſubject to the regulations of the ſociety; as town-houſes, corporation-halls, market-places, church-yards, &c. The lands or other revenue belonging to the corporation do not fall under this claſs, but are *juris privati, quoad* the corporation.

Ways of acquiring property.

3. Property may be acquired, either by *occupation* or *acceſſion*; and transferred by *tradition* or *preſcription*: but preſcription being alſo a way of loſing property, falls to be explained under a ſeparate title. OCCUPATION, or occupancy, is the appropriating of things which have no owner, by apprehending them, or ſeizing their poſſeſſion. This was the original method of acquiring property: and continued, under certain reſtrictions, the doctrine of the Roman law, *Quod nullius eſt, fit occupantis*: but it can have no room in the feudal plan, by which the king is looked upon as the original proprietor of all the lands within his dominions.

4. Even in that ſort of moveable goods, which are preſumed to have once had an owner, this rule obtains by the law of Scotland, *Quod nullius eſt, fit domini regis*. Thus, the right of treaſure hid under ground is not acquired by occupation, but accrues to the king. Thus alſo, where one finds ſtrayed cattle or other moveables, which have been loſt by the former owner, the finder acquires no right in them, but muſt give public notice thereof; and if, within year and day after ſuch notice, the proprietor does not claim his goods, they fall to the king, ſheriff, or other perſon to whom the king has made a grant of ſuch eſcheats.

5. In that ſort of moveables which never had an owner, as wild-beaſts, fowls, fiſhes, or pearls found on the ſhore, the original law takes place, that he who firſt apprehends, becomes proprietor; in ſo much, that tho' the right of hunting, fowling, and fiſhing, be reſtrained by ſtatute, under certain penalties, yet all game, even what is catched in contravention of the law, becomes the property of the catcher (unleſs where the confiſcation thereof is made part of the penalty), the contravener being obnoxious, however, to the penal enactment of the ſtatutes in conſequence of his tranſgreſſion. It was not for a long time a fixed point whether a perſon, though poſſeſſed of the valued rent by law intitling him to kill game, could hunt upon another perſon's grounds without conſent: but it was lately found by the court of ſeſſion, and affirmed upon appeal, that he could not; it being repugnant to the idea of property, that any perſon, however qualified, ſhould have it in his power to traverſe and hunt upon another's grounds without conſent of the proprietor. Although certain things become the property of the firſt occupant, yet there are others which fall not under this rule. Thus, whales thrown in or killed on the coaſts, belong neither to thoſe who kill them, nor to the proprietor of the grounds on which they are caſt; but to the king, providing they are ſo large that they cannot be drawn up by a wane with ſix oxen.

Acceſſion.

6. ACCESSION is that way of acquiring property, by which, in two things which have a connection with or dependence on one another, the property of the principal thing draws after it the property of its acceſſory. Thus the owner of a cow becomes the owner of the calf; a houſe belongs to the owner of the ground on which it ſtands,t hough built with materials belonging to and at the charge of another; trees taking root in our ground, though planted by another, become ours. Thus, alſo, the inſenſible addition made to one's ground by what a river waſhes from other grounds (which is called *alluvio*), accrues to the maſter of the ground which receives the addition: but where it happened that a large piece of ground was diſjoined and annexed to another perſon's by the force of a river or any other accident, and which was by the Romans called *avulſio*, they conſidered the owner's right of property ſtill to ſubſiſt, § 21. *Inſt. de rer. divis*; and it is probable that, in a ſimilar caſe, courts would countenance the diſtinction. The Romans excepted from this rule the caſe of paintings drawn on another man's board or canvas, in conſideration of the excellency of the art; which exception the practice has for a like reaſon extended to ſimilar caſes.

Specification.

7. Under acceſſion is comprehended SPECIFICATION; by which is meant, a perſon's making a new ſpecies or ſubject, from materials belonging to another. Where the new ſpecies can be again reduced to the matter of which it was made, law conſiders the former maſs as ſtill exiſting; and therefore, the new ſpecies, as an acceſſory to the former ſubject, belongs to the proprietor of that ſubject: but where the thing made cannot be ſo reduced, as in the caſe of wine, which cannot be again turned into grapes, there is no place for the *fictio juris*; and therefore the workmanſhip, draws after it the property of the materials. But the perſon who thus carries the property from the other is bound to

indemnify him according to the true value; and in caſe it was done *mala fide*, he may be made liable in the *pretium affectionis* or utmoſt value.

Commixtion,

8. Though the new ſpecies ſhould be produced from the COMMIXTION or confuſion of different ſubſtances belonging to different proprietors, the ſame rule holds; but where the mixture is made by the common conſent of the owner, ſuch conſent makes the whole a common property, according to the ſhares that each proprietor had formerly in the ſeveral ſubjects. Where things of the ſame ſort are mixed without the conſent of the proprietors, which cannot again be ſeparated, *e. g.* two hogſheads of wine, the whole likewiſe becomes a common property; but, in the after-diviſion, regard ought to be had to the different quality of the wines: if the things ſo mixed admit of a ſeparation, *e. g.* two flocks of ſheep, the property continues diſtinct.

Tradition.

2. Property is carried from one to another by TRADITION; which is the delivery of poſſeſſion by the proprietor, with an intention to transfer the property to the receiver. Two things are therefore requiſite, in order to the tranſmitting of property in this way: (1.). The intention or conſent of the former owner to transfer it on ſome proper title of alienation, as ſale, exchange, gift, &c. (2.) The actual delivery in purſuance of that intention. The firſt is called the *cauſa*, the other the *modus transferendi dominii*: which laſt is ſo neceſſary to the acquiring of property, that he who gets the laſt right, with the firſt tradition, is preferred, according to the rule, *Traditionibus, non nudis pactis transferuntur rerum dominia.*

10. Tradition is either real, where the *ipſa corpora* of moveables are put into the hands of the receiver; or ſymbolical, which is uſed where the thing is incapable of real delivery, or even when actual delivery is only inconvenient. Where the poſſeſſion or cuſtody of the ſubject has been before with him to whom the property is to be transferred, there is no room for tradition.

Poſſeſſion; natural, civil, and

11. Poſſeſſion, which is eſſential both to the acquiſition and enjoyment of property, is defined, the detention of a thing, with a deſign or *animus* in the detainer of holding it as his own. It cannot be acquired by the ſole act of the mind, without real detention; but, being once acquired, it may be continued *ſolo animo.* Poſſeſſion is either natural, or civil. Natural poſſeſſion is, when one poſſeſſes by himſelf: thus, we poſſeſs lands by cultivating them and reaping their fruits, houſes by inhabiting them, moveables by detaining them in our hands. Civil poſſeſſion is our holding the thing, either by the ſole act of the mind, or by the hands of another who holds it in our name: thus, the owner of a thing lent poſſeſſes it by the borrower: the proprietor of lands, by his tackſman, truſtee, or ſteward, &c. The ſame ſubject cannot be poſſeſſed entirely, or *in ſolidum*, by two different perſons at one and the ſame time: and therefore poſſeſſion by an act of the mind ceaſes, as ſoon as the natural poſſeſſion is ſo taken up by another, that the former poſſeſſor is not ſuffered to re-enter. Yet two perſons may, in the judgment of law, poſſeſs the ſame ſubject, at the ſame time, on different rights: thus, in the caſe of a pledge, the creditor poſſeſſes it in his own name, in virtue of the right of impignoration; while the proprietor is conſidered as poſſeſſing, in and through the creditor, in ſo far as is neceſſary for ſupporting his right of property. The ſame doctrine holds in life renters, tackſmen, and, generally, in every caſe where there are rights affecting a ſubject diſtinct from the property.

bona fide.

12. A *bona fide* poſſeſſor is he who, though he is not really proprietor of the ſubject, yet believes himſelf proprietor on probable grounds. A *mala fide* poſſeſſor is he who knows, or is preſumed to know, that what he poſſeſſes is the property of another. A poſſeſſor *bona fide* acquired right, by the Roman law, to the fruits of the ſubject poſſeſſed, that had been reaped and conſumed by himſelf, while he believed the ſubjects his own. By our cuſtoms, perception alone, without conſumption, ſecures the poſſeſſor: nay, if he has ſown the ground, while his *bona fides* continued, he is intitled to reap the crop, *propter curam et culturam.* But this doctrine does not reach to civil fruits, *e. g.* the intereſt of money, which the *bona fide* receiver muſt reſtore, together with the principal, to the owner.

13. *bona fides* neceſſarily ceaſeth by the *conſcientia rei alienæ* in the poſſeſſor, whether ſuch conſciouſneſs ſhould proceed from legal interpellation, or private knowledge. *Mala fides* is ſometimes induced by the true owner's bringing his action againſt the poſſeſſor, ſometimes not till litiſconteſtation, and, in caſes uncommonly favourable, not till ſentence be pronounced againſt the poſſeſſor.

Effects of poſſeſſion.

14. The property of moveable ſubjects is preſumed by the bare act of poſſeſſion, until the contrary be proved; but poſſeſſion of an immoveable ſubject, though for a century of years together, if there is no ſeiſin, does not create even a preſumptive right to it: *Nulla ſaſina, nulla terra.* Such ſubject is conſidered as caduciary, and ſo accrues to the ſovereign. Where the property of a ſubject is conteſted, the lawful poſſeſſor is intitled to continue his poſſeſſion, till the point of right be diſcuſſed; and, if he has loſt it by force or ſtealth, the judge will, upon ſummary application, immediately reſtore it to him.

15. Where a poſſeſſor has ſeveral rights in his perſon, affecting the ſubject poſſeſſed, the general rule is, that he may aſcribe his poſſeſſion to which of them he pleaſes; but one cannot aſcribe his poſſeſſion to a title other than that on which it commenced, in prejudice of him from whom his title flowed.

SECT. II. *Of heritable and moveable rights.*

clxiii.

FOR the better underſtanding the doctrine of this title, it muſt be known, that by the law of Scotland, and indeed of moſt nations of Europe ſince the introduction of feus, wherever there are two or more in the ſame degree of conſanguinity to one who dies inteſtate, and who are not all females, ſuch rights belonging to the deceaſed as are either properly feudal, or have any reſemblance to feudal rights, deſcend wholly to one of them, who is conſidered as his proper heir; the others, who have the name of next of kin or executors, muſt be contented with that portion of the eſtate which is of a more periſhable nature. Hence has ariſen the diviſion of rights to be explained under this title; the ſubjects deſcending to the heir, are ſtyled *heritable*; and thoſe that fall to the next of kin *moveable.*

2. All rights of, or affecting lands, under which are

comprehended houſes, mills, fiſhings, teinds; and all rights of ſubjects that are *fundo annexa*, whether completed by ſeiſin or not, are heritable *ex ſua natura*. On the other hand, every thing that moves itſelf or can be moved, and in general whatever is not united to land, is moveable: as houſehold-furniture, corns, cattle, caſh, arrears of rent and of intereſt, even though they ſhould be due on a right of annualrent: for though the arrears laſt mentioned are ſecured on land, yet being preſently payable, they are conſidered as caſh.

Diviſion of rights into heritable and moveable.

3. Debts, *(nomina debitorum)*, when due by bill, promiſſary note, or account, are moveable. When conſtituted by bond, they do not all fall under any one head; but are divided into heritable and moveable, by the following rules. All debts conſtituted by bond bearing an obligation to infeſt the creditor in any heritable ſubject in ſecurity of the principal ſum and annualrent, or annualrent only, are heritable; for they not only carry a yearly profit, but are ſecured upon land.

4. Bonds merely perſonal, though bearing a clauſe of intereſt, are, by act 1661, declared to be moveable as to ſucceſſion; *i. e.* they go, not to the heir, but to the next of kin or executors: but they are heritable with reſpect to the fiſk, and to the rights of huſband and wife; that is, though, by the general rule, moveable rights fall under the communion of goods conſequent upon marriage, and the moveables of denounced perſons fall to the crown or fiſk by ſingle eſcheat, yet ſuch bonds do neither, but are heritable in both reſpects.

5. Bonds taken payable to heirs and aſſignees, ſecluding executors, are heritable in all reſpects, from the deſtination of the creditor. But a bond, which is made payable to heirs, without mention of executors, deſcends, not to the proper heir in heritage, though heirs are mentioned in the bond, but to the executor; for the word *heir*, which is a generic term, points out him who is to ſucceed by law in the right; and the executor, being the heir *in mobilibus*, is conſidered as the perſon to whom ſuch bond is taken payable. But where a bond is taken to heirs-male, or to a ſeries of heirs, one after another, ſuch bond is heritable, becauſe its deſtination neceſſarily excludes executors.

How moveable rights become heritable.

6. Subjects originally moveable become heritable, (1.) By the proprietor's deſtination. Thus, a jewel, or any other moveable ſubject, may be provided to the heir, from the right competent to every proprietor to ſettle his property on whom he pleaſes. (2.) Moveable rights may become heritable, by the ſupervening of an heritable ſecurity: Thus, a ſum due by a perſonal bond becomes heritable, by the creditor's accepting an heritable right for ſecuring it, or by adjudging upon it.

7. Heritable rights do not become moveable by acceſſory moveable ſecurities; the heritable right being in ſuch caſe the *jus nobilius*, which draws the other after it.

Rights partly heritable, partly moveable.

8. Certain ſubjects partake, in different reſpects of the nature both of heritable and moveable. Perſonal bonds are, by the above cited act 1661, moveable in reſpect of ſucceſſion; but heritable as to the fiſk, and the rights of huſband and wife. All bonds, whether merely perſonal, or even heritable, on which no ſeiſin has followed, may be affected at the ſuit of creditors, either by adjudication, which is a diligence proper to heritage; or by arreſtment, which is peculiar to moveables. Bonds ſecluding executors, though they deſcend to the creditor's heir, are payable by the debtor's executors, without relief againſt the heir; ſince the debtor's ſucceſſion cannot be affected by the deſtination of the creditor.

What period makes a ſubject heritable or moveable.

9. All queſtions, whether a right be heritable or moveable, muſt be determined according to the condition of the ſubject at the time of the anceſtor's death. If it was heritable at that period, it muſt belong to the heir; if moveable, it muſt fall to the executor, without regard to any alterations that may have affected the ſubject in the intermediate period between the anceſtor's death and the competition.

I. HERITABLE RIGHTS.

SECT. III. *Of the conſtitution of heritable rights by charter and ſeiſin.* clxiv.

Origin of the feudal law.

HERITABLE rights are governed by the feudal law, which owed its origin, or at leaſt its firſt improvements, to the Longobards; whoſe kings, upon having penetrated into Italy, the better to preſerve their conqueſts, made grants to their principal commanders of great part of the conquered provinces, to be again ſubdivided by them among the lower officers, under the conditions of fidelity and military ſervice.

2. The feudal conſtitutions and uſages were firſt reduced into writing about the year 1150, by two lawyers of Milan, under the title of *Conſuetudines Feudorum*. None of the German emperors appear to have expreſsly confirmed this collection by their authority; but it is generally agreed, that it had their tacit approbation, and was conſidered as the cuſtomary feudal law of all the countries ſubject to the empire. No other country has ever acknowledged theſe books for their law; but each ſtate has formed to itſelf ſuch a ſyſtem of feudal rules, as beſt agreed with the genius of its own conſtitution. In feudal queſtions, therefore, we are governed, in the firſt place, by our own ſtatutes and cuſtoms; where theſe fail us, we have regard to the practice of neighbouring countries, if the genius of their law appears to be the ſame with ours; and ſhould the queſtion ſtill remain doubtful, we may have recourſe to thoſe written books of the feus, as to the original plan on which all feudal ſyſtems have proceeded.

Definition of feus.

3. This military grant got the name, firſt of *beneficium*, and afterwards of *feudum*; and was defined a gratuitous right to the property of lands, made under the conditions of fealty and military ſervice, to be performed to the granter by the receiver; the radical right of the lands ſtill remaining in the granter. Under lands, in this definition, are comprehended all rights or ſubjects ſo connected with land, that they are deemed a part thereof; as houſes, mills, fiſhings, juriſdictions, patronages, &c. Though feus in their original nature were gratuitous, they ſoon became the ſubject of commerce; ſervices of a civil or religious kind were frequently ſubſtituted in place of military; and now, of a long time, ſervices of every kind have been entirely diſpenſed

Superiors and vaſſals.

penſed with in certain feudal tenures. He who makes the grant is called the *ſuperior*, and he who receives it the *vaſſal*. The ſubject of the *grant* is commonly called the *feu*; though that word is at other times, in law, uſed to ſignify one particular tenure. (See Sect. iv. 2.). The intereſt retained by the ſuperior in the feu is ſtyled *dominium directum*, or the ſuperiority; and the intereſt acquired by the vaſſal, *dominium utile*, or the property. The word *fee* is promiſcuouſly applied to both.

Allodial goods.

4. Allodial goods are oppoſed to feus; by which are underſtood goods enjoyed by the owner, independent of a ſuperior. All moveable goods are allodial; lands only are ſo when they are given without the condition of fealty or homage. By the feudal ſyſtem, the ſovereign, who is the fountain of feudal rights, reſerves to himſelf the ſuperiority of all the lands of which he makes the grant; ſo that, in Britain, no lands are allodial, except thoſe of the king's own property, the ſuperiorities which the king obſerves in the property-lands of his ſubjects, and manſes and glebes, the right of which is completed by the preſbytery's deſignation, without any feudal grant.

Who can grant feudal rights.

5. Every perſon who is in the right of an immoveable ſubject, provided he has the free adminiſtration of his eſtate, and is not debarred by ſtatute, or by the nature of his right, may diſpoſe of it to another. Nay, a vaſſal, though he has only the *dominium utile*, can ſubfeu his property to a ſubvaſſal by a ſubaltern right, and thereby raiſe a new *dominium directum* in himſelf, ſubordinate to that which is in his ſuperior; and ſo *in infinitum*. The vaſſal who thus ſubfeus is called the ſubvaſſal's immediate ſuperior, and the vaſſal's ſuperior is the ſubvaſſal's mediate ſuperior.

Who can receive them.

6. All perſons who are not diſabled by law, may acquire and enjoy feudal rights. Papiſts cannot purchaſe a land-eſtate by any voluntary deed. Aliens, who owe allegiance to a foreign prince, cannot hold a fuedal right without naturalization: and therefore, where ſuch privilege was intended to be given to favoured nations or perſons, ſtatutes of naturalization were neceſſary, either general or ſpecial, or at leaſt, letters of naturalization by the ſovereign.

What ſubjects can be granted in feu.

7. Every heritable ſubject, capable of commerce, may be granted in feu. From this general rule are excepted, 1. The annexed property of the crown, which is not alienable without a previous diſſolution in parliament. 2. Tailzied lands, which are deviſed under condition that they ſhall not be aliened. 3. An eſtate *in hæreditate jacente* cannot be effectually aliened by the heir-apparent (*i. e.* not entered); but ſuch alienation becomes effectual upon his entry, the ſupervening right accruing in that caſe to the purchaſer; which is a rule applicable to the alienation of all ſubjects not belonging to the vender at the time of the ſale.

Feudal charter.

1. The feudal right, or, as it is called, *inveſtiture*, is conſtituted by charter and ſeiſin. By the charter, we underſtand that writing which contains the grant of the feudal ſubject to the vaſſal, whether it be executed in the proper form of a charter, or of a diſpoſition. Charters by ſubject-ſuperiors are granted, either, 1. *A me de ſuperiore meo*, when they are to be holden, not of the granter himſelf, but of his ſuperior. This ſort is called a *public holding*, becauſe vaſſals were in ancient times publicly received in the ſuperior's court before the *pares curiæ* or co-vaſſals. Or, 2. *De me*, where the lands are to be holden of the granter. Theſe were called ſometimes *baſe rights*, from *bas, lower*: and ſometimes *private*, becauſe, before the eſtabliſhment of the records, they were eaſily concealed from third parties; the nature of all which will be more fully explained, Sect. vii. An original charter is that by which the fee is firſt granted: A charter by progreſs is a renewed diſpoſition of that fee to the heir or aſſignee of the vaſſal. All doubtful clauſes in charters by progreſs ought to be conſtrued agreeably to the original grant; and all clauſes in the original charter are underſtood to be implied in the charters by progreſs, if there be no expreſs alteration.

Its conſtituent parts.

9. The firſt clauſe in an original charter, which follows immediately after the name and deſignation of the granter, is the narrative or recital, which expreſſes the cauſes inductive of the grant. If the grant be made for a valuable conſideration, it is ſaid to be *onerous*; if for love and favour, *gratuitous*. In the diſpoſitive clauſe of a charter, the ſubjects made over are deſcribed either by ſpecial boundaries or march-ſtones, (which is called a *bounding charter*), or by ſuch other characters as may ſufficiently diſtinguiſh them. A charter regularly carries right to no ſubjects but what are contained in this clauſe, though they ſhould be mentioned in ſome other clauſe of the charter. It has been however found, that a right to ſalmon-fiſhing was carried by a clauſe *cum piſcariis* in the *tenendas* of a charter, the ſame having been followed with poſſeſſion.

10. The clauſe of *tenendas* (from its firſt words *tenendas prædictas terras*) expreſſes the particular tenure by which the lands are to be holden. The clauſe of *reddendo* (from the words *reddendo inde annuatim*) ſpecifies the particular duty or ſervice which the vaſſal is to pay or perform to the ſuperior.

Warrandice.

11. The clauſe of *warrandice* is that by which the granter obliges himſelf that the right conveyed ſhall be effectual to the receiver. Warrandice is either *perſonal* or *real*. *Perſonal* warrandice, where the granter is only bound perſonally, is either, 1. *Simple*, that he ſhall grant no deed in prejudice of the right; and this ſort, which is confined to future deeds, is implied even in donations. 2. Warrandice *from fact and deed*, by which the granter warrants that the right neither has been, nor ſhall be, hurt by any fact of his. Or, 3. *Abſolute* warrandice *contra omnes mortales*, whereby the right is warranted againſt all legal defects in it which may carry it off from the receiver either wholly or in part. Where a ſale of lands proceeds upon an *onerous* cauſe, the granter is liable in abſolute warrandice, though no warrandice be expreſſed; but in aſſignations to debts or decrees, no higher warrandice than from fact and deed is implied.

12. Gratuitous grants by the crown imply no warrandice; and though warrandice ſhould be expreſſed, the clauſe is ineffectual, from a preſumption that it has crept in by the negligence of the crown's officers. But where the crown makes a grant, not *jure coronæ*, but for an adequate price, the ſovereign is in the ſame caſe with his ſubjects.

Effects of warrandice.

13. Abſolute warrandice, in caſe of eviction, affords

an action to the grantee againſt the granter, for making up to him all that he ſhall have ſuffered through the defect of the right; and not ſimply for his indemnification, by the granter's repayment of the price to him. But as warrandice is penal, and conſequently *ſtricti juris*, it is not eaſily preſumed, nor is it incurred from every light ſervitude that may affect the ſubject; far leſs does it extend to burdens which may affect the ſubject poſterior to the grant, nor to thoſe impoſed by public ſtatute, whether before or after, unleſs ſpecially warranted.

Real warrandice.

14. *Real* warrandice is either, 1. *Expreſs*, whereby, in ſecurity of the lands principally conveyed, other lands, called *warrandice-lands*, are alſo made over, to which the receiver may have recourſe in caſe the principal lands be evicted. Or, 2. *Tacit*, which is conſtituted by the exchange or excambion of one piece of ground with another; for, if the lands exchanged are carried off from either of the parties, the law itſelf, without any paction, gives that party immediate recourſe upon his own firſt lands, given in exchange for the lands evicted.

Excambion.

Precept of ſeiſin.

15. The charter concludes with a *precept of ſeiſin*, which is the command of the ſuperior granter of the right to his bailie, for giving ſeiſin or poſſeſſion to the vaſſal, or his attorney, by delivering to him the proper ſymbols. Any perſon, whoſe name may be inſerted in the blank left in the precept for that purpoſe, can execute the precept as bailie; and whoever has the precept of ſeiſin in his hands, is preſumed to have a power of attorney from the vaſſal for receiving poſſeſſion in his name.

Inſtrument of ſeiſin.

16. A ſeiſin is the inſtrument or atteſtation of a notary, that poſſeſſion was actually given by the ſuperior or his bailie, to the vaſſal or his attorney; which is conſidered as ſo neceſſary a ſolemnity, as not to be ſuppliable, either by a proof of natural poſſeſſion, or even of the ſpecial fact that the vaſſal was duly entered to the poſſeſſion by the ſuperior's bailie.

Symbols uſed in ſeiſins.

17. The ſymbols by which the delivery of poſſeſſion is expreſſed, are, for lands, earth, and ſtone; for rights of annualrent payable forth of land, it is alſo earth and ſtone with the addition of a penny money; for parſonage tiends, a ſheaf of corn; for juriſdictions, the book of the court; for patronages, a pſalm-book, and the keys of the church; for fiſhings, net and coble; for mills, clap and happer, &c. The ſeiſin muſt be taken upon the ground of the lands, except where there is a ſpecial diſpenſation in the charter from the crown.

Regiſtration of ſeiſins.

18. All ſeiſins muſt be regiſtered within 60 days after their date, either in the general regiſter of ſeiſins at Edinburgh, or in the regiſter of the particular ſhire appointed by the act 1617; which, it muſt be obſerved, is not, in every caſe, the ſhire within which the lands lie. Burgage ſeiſins are ordained to be regiſtered in the books of the borough.

19. Unregiſtered ſeiſins are ineffectual againſt third parties, but they are valid againſt the granters and their heirs. Seiſins regularly recorded, are preferable, not according to their own dates, but the dates of their regiſtration.

One ſeiſin ſerves in contiguous and in united tenements.

20. Seiſin neceſſarily ſuppoſes a ſuperior by whom it is given; the right therefore which the ſovereign, who acknowledges no ſuperior, has over the whole lands of Scotland, is conſtituted *jure coronæ* without ſeiſin. In ſeveral parcels of land that lie contiguous to one another, one ſeiſin ſerves for all, unleſs the right of the ſeveral parcels be either holden of different ſuperiors, or derived from different authors, or enjoyed by different tenures under the ſame ſuperior. In diſcontiguous lands, a ſeparate ſeiſin muſt be taken on every parcel, unleſs the ſovereign has united them into one tenandry by a charter of union; in which caſe, if there is no ſpecial place expreſſed, a ſeiſin taken on any part of the united lands will ſerve for the whole, even though they be ſituated in different ſhires. The only effect of union is, to give the diſcontiguous lands the ſame quality as if they had been contiguous or naturally united; union, therefore, does not take off the neceſſity of ſeparate ſeiſins, in lands holden by different tenures, or the rights of which flow from different ſuperiors, theſe being incapable of natural union.

Barony implies union.

21. The privilege of barony carries a higher right than union does, and conſequently includes union in it as the leſſer degree. This right of barony can neither be given, nor tranſmitted, unleſs by the crown; but the quality of ſimple union, being once conferred on lands by the ſovereign, may be communicated by the vaſſal or ſubvaſſal. Though part of the lands united or erected into a barony be ſold by the vaſſal to be holden *a me*, the whole union is not thereby diſſolved; what remains unſold retains the quality.

A charter becomes real only after ſeiſin.

22. A charter, not perfected by ſeiſin, is a right merely perſonal, which does not transfer the property (ſee N° clxxiii. 1.); and a ſeiſin of itſelf bears no faith without its warrant: It is the charter and ſeiſin joined together that conſtitutes the feudal right, and ſecures the receiver againſt the effect of all poſterior ſeiſins even though the charters on which they proceed ſhould be prior to his.

All burdens muſt be inſerted in the inveſtiture.

23. No quality which is deſigned as a lien or real burden on a feudal right, can be effectual againſt ſingular ſucceſſors if it be not inſerted in the inveſtiture. If the creditors in the burden are not particularly mentioned, the burden is not real; for no perpetual unknown incumberance can be created upon lands. Where the right itſelf is granted with the burden of the ſum therein mentioned, or where it is declared void if the ſum be not paid againſt a day certain; the burden is real; but where the receiver is ſimply obliged by his acceptance to make payment, the clauſe is effectual only againſt him and his heirs.

Sect. IV. *Of the ſeveral kinds of holding.* clxv.

Feudal ſubjects are chiefly diſtinguiſhed by their different manners of holding, which were either *ward*, *blanch*, *feu*, or *burgage*. *Ward-holding*, (which is now aboliſhed by 20 *Geo. II. c.* 50) was that which was granted for military ſervice. Its proper *reddendo* was *ſervices*, or *ſervices uſed and wont*; by which laſt was meant the performance of ſervice whenever the ſuperior's occaſions required it. As all feudal rights were originally held by this tenure, ward-holding was *in dubio* preſumed. Hence, though the *reddendo* had contained ſome ſpecial ſervice or yearly duty, the holding was preſumed ward, if another holding was not particularly expreſſed.

Ward-holding.

Feu-holding.

2. *Feu*-holding is that whereby the vaſſal is obliged

to pay to the ſuperior a yearly rent in money or grain, and ſometimes alſo in ſervices proper to a farm, as ploughing, reaping, carriages for the ſuperior's uſe, &c. *nomine feudi firmæ*. This kind of tenure was introduced for the encouragement of agriculture, the improvement of which was conſiderably obſtructed by the vaſſal's obligation to military ſervice. It appears to have been a tenure known in Scotland as far back as *leges burgorum*.

Blanch-holding.

3. *Blanch*-holding is that whereby the vaſſal is to pay to the ſuperior an eluſory yearly duty, as a penny money, a roſe, a pair of gilt ſpurs, &c. merely in acknowledgment of the ſuperiority, *nomine albæ firmæ*. This duty, where it is a thing of yearly growth, if it be not demanded within the year, cannot be exacted thereafter; and where the words *ſi petatur tantum* are ſubjoined to the *reddendo*, they imply a releaſe to the vaſſal, whatever the quality of the duty may be, if it is not aſked within the year.

Burgage-holding.

4. *Burgage*-holding is that, by which boroughs-royal hold of the ſovereign the lands which are contained in their charters of erection. This, in the opinion of *Craig*, does not conſtitute a ſeparate tenure, but is a ſpecies of ward-holding; with this ſpecialty, that the vaſſal is not a private perſon, but a community: and indeed, watching and warding, which is the uſual ſervice contained in the *reddendo* of ſuch charters, might be properly enough ſaid, ſome centuries ago, to have been of the military kind. As the royal borough is the king's vaſſal, all burgage-holders hold immediately of the crown: the magiſtrates, therefore, when they receive the reſignations of the particular burgeſſes, and give ſeiſin to them, act, not as ſuperiors, but as the king's bailies ſpecially authoriſed thereto.

Mortification.

5. Feudal ſubjects, granted to churches, monaſteries, or other ſocieties for religious or charitable uſes, are ſaid to be mortified, or granted *ad manum mortuam*; either becauſe all caſualties muſt neceſſarily be loſt to the ſuperior, where the vaſſal is a corporation, which never dies; or becauſe the property of theſe ſubjects is granted to a dead hand, which cannot transfer it to another. In lands mortified in times of Popery to the church, whether granted to prelates for the behoof of the church, or *in puram eleemoſynam*; the only ſervices preſtable by the vaſſals were prayers, and ſinging of maſſes for the ſouls of the deceaſed, which approaches nearer to blanch-holding than ward. The purpoſes of ſuch grants having been, upon the reformation, declared ſuperſtitious, the lands mortified were annexed to the crown; but mortifications to univerſities, hoſpitals, &c. were not affected by that annexation; and lands may, at this day, be mortified to any lawful purpoſe, either by blanch or by feu holding. But as the ſuperior muſt loſe all the caſualties of ſuperiority in the caſe of mortifications to churches, univerſities, &c. which being conſidered as a corporation, never dies; therefore lands cannot be mortified without the ſuperior's conſent. *Craig, lib.* 1. *dieg.* 11. § 21.

clxvi.

Sect. V. *Of the caſualties due to the ſuperior.*

Fixed rights of ſuperiority.

The right of the ſuperior continues unimpaired, notwithſtanding the feudal grant, unleſs in ſo far as the *dominium utile*, or property, is conveyed to his vaſſal. The ſuperiority carries a right to the ſervices and annual duties contained in the *reddendo* of the vaſſal's charter. The duty payable by the vaſſal is a *debitum fundi*, *i. e.* it is recoverable, not only by a perſonal action againſt himſelf, but by a real action againſt the lands.

Caſual rights.

2. Beſides the conſtant fixed rights of ſuperiority, there are others, which, becauſe they depend upon uncertain events, are called *caſualties*.

Ward-holding.

3. The caſualties proper to a ward-holding, while that tenure ſubſiſted, were *ward*, *recognition*, and *marriage*, which it is now unneceſſary to explain, as by the late ſtatutes 20 and 25 Geo. II. for aboliſhing ward-holdings, the tenure of the lands holding ward of the crown or prince is turned into *blanch*, for payment of one penny Scots yearly, *ſi, petatur tantum*; and the tenure of thoſe holden of ſubjects into *feu*, for payment of ſuch yearly feu-duty in money, victual, or cattle, in place of all ſervices, as ſhould be fixed by the court of ſeſſion. And accordingly that court, by act of ſederunt Feb. 8. 1749, laid down rules for aſcertaining the extent of theſe feu-duties. A full hiſtory of their caſualties, and of the effects conſequent upon their falling to the ſuperior, will be found in Erſkine's large Inſtitute, B. 2. T. 5. § 5. *et ſequen*; to which the reader is referred.

Feu-holding.

4. The only caſualty, or rather forfeiture, proper to feu-holding, is the loſs or tinſel of the feu-right, by the neglect of payment of the feu-duty for two full years. Yet where there is no conventional irritancy in the feu-right, the vaſſal is allowed to purge the legal irritancy at the bar; that is, he may prevent the forfeiture, by making payment before ſentence: but where the legal irritancy is fortified by a conventional, he is not allowed to purge, unleſs where he can give a good reaſon for the delay of payment.

Non-entry.

5. The caſualties common to all holdings are, *non-entry*, *relief*, *liferent-eſcheat*, *diſclamation*, and *purpreſture*. NON-ENTRY is that caſualty which ariſes to the ſuperior out of the rents of the feudal ſubject, through the heir's neglecting to renew the inveſtiture after his anceſtor's death. The ſuperior is intitled to this caſualty, not only where the heir has not obtained himſelf infeſt, but where his retour or infeſtment is ſet aſide upon nullities. The heir, from the death of the anceſtor, till he be cited by the ſuperior in a proceſs of general declarator of non-entry, loſes only the retoured duties of his lands, (ſee next parag.); and he forfeited theſe, though his delay ſhould not argue any contempt of the ſuperior, becauſe the caſualty is conſidered to fall, as a condition implied in the feudal right, and not as a penalty of tranſgreſſion; but reaſonable excuſes are now admitted to liberate even from the retoured duties before citation.

Retoured duties.

6. For underſtanding the nature of retoured duties, it muſt be known, that there was anciently a general valuation of all the lands of Scotland, deſigned both for regulating the proportion of public ſubſidies, and for aſcertaining the quantity of non-entry and relief-duties payable to the ſuperior; which appears, by a contract between K. R. Bruce and his ſubjects *anno* 1327, preſerved in the library of the Faculty of Advocates, to have been ſettled at leaſt as far back as the reign of Alexander III. This valuation became in the

Old and new extents.

Valued rent.

courſe of time, by the improvement of agriculture, and perhaps alſo by the heightening of the nominal value of the money, from the reign of Robert I. downwards to that of James III. much too low a ſtandard for the ſuperior's caſualties: wherefore, in all ſervices of heirs, the inqueſt came at laſt to take proof likewiſe of the preſent value of the lands contained in the brief *(quantum nunc valent)*, in order to fix theſe caſualties. The firſt was called the *old*, and the other the *new*, *extent*. Though both extents were ordained to be ſpecified in all retours made to the chancery upon brieves of inqueſt; yet by the appellation of retoured duties in a queſtion concerning caſualties, the new extent is always underſtood. The old extent continued the rule for levying public ſubſidies, till a tax was impoſed by new proportions, by ſeveral acts made during the uſurpation. By two acts of Cromwell's parliament, held at Weſtminſter in 1656, impoſing taxations on Scotland, the rates laid upon the ſeveral counties are preciſely fixed. The ſubſidy granted by the act of convention 1667 was levied on the ſeveral counties, nearly in the ſame proportions that were fixed by the uſurper in 1656; and the ſums to which each county was ſubjected were ſubdivided among the individual landholders in that county, according to the valuations already ſettled, or that ſhould be ſettled by the commiſſioners appointed to carry that act into execution. The rent fixed by theſe valuations is commonly called the *valued rent;* according to which the land-tax, and moſt of the other public burdens, have been levied ſince that time.

7. In feu-holdings, the feu-duty is retoured as the rent, becauſe the feu-duty is preſumed to be, and truly was at firſt, the rent. The ſuperior therefore of a feu-holding gets no non-entry, before citation in the general declarator; for he would have been intitled to the yearly feu-duty, though the fee had been full, *i. e.* though there had been a vaſſal infeſt in the lands. The ſuperior of teinds gets the fifth part of the retoured duty as non-entry, becauſe the law conſiders teinds to be worth a fifth part of the rent. In rights of annualrent which are holden of the granter, the annualrenter becomes his debtor's vaſſal; and the annualrent contained in the right is retoured to the blanch or other duty contained in the right before declarator.

8. It is becauſe the retoured duty is the preſumed rent, that the non-entry is governed by it. If therefore no retour of the lands in non-entry can be produced, nor any evidence brought of the retoured duty, the ſuperior is intitled to the real, or at leaſt to the valued, rent, even before citation. In lands formerly holden ward of the King, the heir, in place of the retoured duties, is ſubjected only to the annual payment of one *per. cent.* of the valued rent.

9. The heir, after he is cited by the ſuperior in the action of general declarator, is ſubjected to the full rents till his entry, becauſe his neglect is leſs excuſable after citation. The decree of declarator, proceeding on this action, intitles the ſuperior to the poſſeſſion, and gives him right to the rents downward from the citation. As this ſort of non-entry is properly penal, the law has always reſtricted it to the retoured duties, if the heir had a probable excuſe for not entering.

In what caſes non-entry is not due.

10. Non-entry does not obtain in burgage-holdings, becauſe the incorporation of inhabitants holds the whole incorporated ſubjects of the King; and there can be no non-entry due in lands granted to communities, becauſe there the vaſſal never dies. This covers the right of particulars from non-entry: for if non-entry be excluded with regard to the whole, it cannot obtain with regard to any part. It is alſo excluded, as to a third of the lands, by the terce, during the widow's life; and as to the whole of them, by the courteſy during the life of the huſband. But it is not excluded by a precept of ſeiſin granted to the heir till ſeiſin be taken thereupon.

Relief.

11. RELIEF is the caſualty which intitles the ſuperior to an acknowledgment or conſideration from the heir for receiving him as vaſſal. It is called *relief*, becauſe, by the entry of the heir, his fee is relieved out of the hands of the ſuperior. It is not due in feu-holdings flowing from ſubjects, unleſs where it is expreſſed in the charter by a ſpecial clauſe for doubling the feu-duty at the entry of an heir; but, in feu-rights holden of the crown, it is due, though there ſhould be no ſuch clauſe in the charter. The ſuperior can recover this caſualty, either by a poinding of the ground, as a *debitum fundi*, or by a perſonal action againſt the heir. In blanch and feu-holdings, where this caſualty is expreſsly ſtipulated, a year's blanch or feu-duty is due in name of *relief*, beſide the current year's duty payable in name of *blanch* or *feu farm*.

Eſcheat.

12. ESCHEAT (from *eſcheoir*, *to happen* or *fall)* is that forfeiture which falls through a perſon's being denounced rebel. It is either *ſingle* or *liferent*. *Single eſcheat*, though it does not accrue to the ſuperior, muſt be explained in this place, becauſe of its coincidence with liferent.

Letters of horning.

13. After a debt is conſtituted, either by a formal decree, or by regiſtration of the ground of debt, which to the ſpecial effect of execution, is in law accounted a decree; the creditor may obtain letters of horning, iſſuing from the ſignet, commanding meſſengers to charge the debtor to pay or perform his obligation, within a day certain. Where horning proceeds on a formal decree of the ſeſſion, the time indulged by law to the debtor is fifteen days; if upon a decree of the commiſſion of teinds or admiral, it is ten; and upon the decrees of all inferior judges, fifteen days. Where it proceeds on a regiſtered obligation, which ſpecifies the number of days, that number muſt be the rule; and if no preciſe number be mentioned, the charge muſt be given in fifteen days, which is the term of law, unleſs where ſpecial ſtatute interpoſes; as in bills, upon which the debtor may be charged on ſix days,

Denunciation.

14. The meſſenger muſt execute theſe letters (and indeed all ſummonſes) againſt the debtor, either perſonally or at his dwelling-houſe; and, if he get not acceſs to the houſe, he muſt ſtrike ſix knocks at the gate, and thereafter affix to it a copy of his execution. If payment be not made within the days mentioned in the horning, the meſſenger, after proclaiming three oyeſſes at the market-croſs of the head borough of the debtor's domicile, and reading the letters there, blows three blaſts with a horn, by which the debtor is underſtood to be proclaimed rebel to the king for contempt of his authority; after which, he muſt affix a copy of the execution to the market-croſs: This is called *the publication of the diligence*, or a *denunciation at the horn*. Where the debtor is not in Scotland, he muſt be charged on ſixty days, and denounced at the

market-croſs of Edinburgh, and pier and ſhore of Leith.

Conſequences thereof.

15. Denunciation, if regiſtered within 15 days, either in the ſheriff's books, or in the general regiſter, drew after it the rebel's ſingle eſcheat, *i. e.* the forfeiture of his moveables to the crown. Perſons denounced rebels have not a *perſona ſtandi in judicio;* they can neither ſue nor defend in any action. But this incapacity being unfavourable, is perſonal to the rebel, and cannot be pleaded againſt his aſſignee.

Denunciation in criminal caſes.

16. Perſons cited to the court of juſticiary may be alſo denounced rebels, either for appearing there with too great a number of attendants: or, if they fail to appear, they are declared fugitives from the law. Single eſcheat falls, without denunciation, upon ſentence of death pronounced on any criminal trial; and, by ſpecial ſtatute, upon one's being convicted of certain crimes, though not capital; as perjury, bigamy, deforcement, breach of arreſtment, and uſury. By the late act aboliſhing ward-holdings, the caſualties both of ſingle and liferent eſcheat are diſcharged, when proceeding upon denunciation for civil debts; but they ſtill continue, when they ariſe from criminal cauſes. All moveables belonging to the rebel at the time of his rebellion, (whether proceeding upon denunciation, or ſentence in a criminal trial), and all that ſhall be afterwards acquired by him until relaxation, fall under ſingle eſcheat. Bonds bearing intereſt, becauſe they continue heritable *quoad fiſcum,* fall not under it, nor ſuch fruits of heritable ſubjects as became due after the term next enſuing the rebellion, theſe being reſerved for the liferent eſcheat.

17. The king never retains the right of eſcheat to himſelf, but makes it over to a donatory, whoſe gift is not perfected, till, upon an action of general declarator, it be declared that the rebels eſcheat has fallen to the crown by his denunciation, and that the right of it is now transferred to the purſuer by the gift in his favour. Every creditor therefore of the rebel, whoſe debt was contracted before rebellion, and who has uſed diligence before declarator, is preferable to the donatory. But the eſcheat cannot be affected by any debt contracted, nor by any voluntary deed of the rebel after rebellion.

Letters of relaxation.

18. The rebel, if he either pays the debt charged for, or ſuſpends the diligence, may procure letters of relaxation from the horn, which, if publiſhed in the ſame place, and regiſtered 15 days thereafter in the ſame regiſter with the denunciation, have the effect to reſtore him to his former ſtate; but they have no retroſpect as to the moveables already fallen under eſcheat, without a ſpecial clauſe for that purpoſe.

Liferent eſcheat.

19. The rebel, if he continues unrelaxed for year and day after rebellion, is conſtrued to be civilly dead: and therefore, where he holds any feudal right, his ſuperiors, as being without a vaſſal, are intitled, each of them, to the rents of ſuch of the lands belonging to the rebel as hold of himſelf, during all the days of the rebel's natural life, by the caſualty of LIFERENT ESCHEAT; except where the denunciation proceeds upon treaſon or proper rebellion, in which caſe the liferent falls to the king.

20. It is that eſtate only, to which the rebel has a proper right of liferent in his own perſon, that falls under his liferent eſcheat.

21. Though neither the ſuperior nor his donatory can enter into poſſeſſion in conſequence of this caſualty, till decree of declarator; yet that decree, being truly declaratory, has a retroſpect, and does not ſo properly confer a new right, as declare the right formerly conſtituted to the ſuperior, by the civil death of his vaſſal. Hence, all charters or heritable bonds, though granted prior to the rebellion, and all adjudications, though led upon debts contracted before that period, are ineffectual againſt the liferent eſcheat, unleſs ſeiſin be taken thereon within year and day after the granter's rebellion.

22. Here, as in ſingle eſcheat, no debt contracted after rebellion can hurt the donatory, nor any voluntary right granted after that period, though in ſecurity or ſatisfaction of prior debts.

Diſclamation.

Purpreſture.

23. DISCLAMATION is that caſualty whereby a vaſſal forfeits his whole feu to his ſuperior, if he diſowns or diſclaims him, without ground, as to any part of it. PURPRESTURE draws likewiſe a forfeiture of the whole feu after it; and is incurred by the vaſſal's encroaching upon any part of his ſuperior's property, or attempting by building, incloſing, or otherwiſe, to make it his own. In both theſe feudal delinquencies, the leaſt colour of excuſe ſaves the vaſſal.

Signatures.

24. All grants from the crown, whether charters, gifts of caſualties, or others, proceed on ſignatures which paſs the ſignet. When the king reſided in Scotland, all ſignatures were ſuperſcribed by him; but, on the acceſſion of James VI. to the crown of England, a cachet or ſeal was made, having the king's name engraved on it, in purſuance of an act of the privy-council, April 4. 1603. with which all ſignatures were to be afterwards ſealed, that the lords of exchequer were impowered to paſs; and theſe powers are transferred to the court of exchequer, which was eſtabliſhed in Scotland after the union of the two kingdoms in 1707. Grants of higher conſequence, as remiſſions of crimes, gifts proceeding upon forfeiture, and charters of *novodamus,* muſt have the king's ſign manual for their warrant.

Seals.

25. If lands holding of the crown were to be conveyed, the charter paſſed, before the union of the kingdoms in 1707, by the great ſeal of Scotland; and now by a ſeal ſubſtitute in place thereof. Grants of church-dignities, during epiſcopacy, paſſed alſo by the great ſeal; and the commiſſions to all the principal officers of the crown, as Juſtice-Clerk, King's Advocate, Solicitor, &c. do ſo at this day. All rights which ſubjects may tranſmit by ſimple aſſignation, the king tranſmits by the privy-ſeal: as gifts of moveables, or of caſualties that require no ſeiſin. The quarter ſeal, otherwiſe called the *teſtimonial of the great ſeal,* is appended to gifts of tutory, commiſſions of brieves iſſuing from the chancery, and letters of preſentation to lands holding of a ſubject, proceeding upon forfeiture, baſtardy, or *ultimus hæres.*

Their uſe.

26. Seals are to royal grants what ſubſcription is to rights derived from ſubjects, and give them authority; they ſerve alſo as a check to gifts procured *(ſubreptione vel obreptione)* by concealing the truth, or expreſſing a falſehood; for, where this appears, the gift may be ſtopped before paſſing the ſeals, though the ſignature ſhould have been ſigned by the king. All rights paſſing under the great or privy ſeal muſt be regiſtered

in the regiſters of the great or privy ſeal *reſpective*, before appending the ſeal.

clxvii. SECT. VI. *Of the right which the vaſſal acquires by getting the feu.*

Dominium utile.

UNDER the *dominium utile* which the vaſſal acquires by the feudal right, is comprehended the property of whatever is conſidered as part of the lands, whether of houſes, woods, incloſures, &c. above ground; or of coal, limeſtone, minerals, &c. under ground. Mills have, by the generality of lawyers, been deemed a ſeparate tenement, and ſo not carried by a charter or diſpoſition, without either a ſpecial clauſe conveying mills, or the erection of the lands into a barony. Yet it is certain, that, if a proprietor builds a mill on his own lands, it will be carried by his entail, or by a retour, without mentioning it, although the lands are not erected into a barony. If the lands diſponed be aſtricted, or thirled to another mill, the purchaſer is not allowed to build a new corn-mill on his property, even though he ſhould offer ſecurity that it ſhall not hurt the thirle; which is introduced for preventing daily temptations to fraud.

2. Proprietors are prohibited to hold dove-cotes, unleſs their yearly rent, lying within two miles thereof, extend to ten chalders of victual. A purchaſer of lands, with a dove-cote, is not obliged to pull it down, though he ſhould not be qualified to build one; but, if it becomes ruinous, he cannot rebuild it. The right of brewing, though not expreſſed in the grant, is implied in the nature of property; as are alſo the rights of fiſhing, fowling, and hunting, in ſo far as they are not reſtrained by ſtatute.

Regalia.

3. There are certain rights naturally conſequent on property, which are deemed to be preferred by the crown as *regalia;* unleſs they be ſpecially conveyed. Gold and ſilver mines are of this ſort; the firſt univerſally; and the other, where three half-pennies of ſilver can be extracted from the pound of lead, by act 1424, (three half-pennies at that time was equal to about two ſhillings five pennies of the preſent Scots money), Theſe were by the ancient law annexed to the crown; but they are now diſſolved from it; and every proprietor is intitled to a grant of the mines within his own lands, with the burden of delivering to the crown a tenth of what ſhall be brought up.

4. Salmon-fiſhing is likewiſe a right underſtood to be reſerved to the crown, if it be not expreſly granted: but 40 years poſſeſſion thereof, where the lands are either erected into a barony, or granted with the general clauſe of fiſhings, eſtabliſhes the full right of the ſalmon-fiſhing in the vaſſal. A charter of lands, within which any of the king's foreſts lie, does not carry the property of ſuch foreſt to the vaſſal.

Res publicæ.

5. All the ſubjects which were by the Roman law accounted *res publicæ*, as rivers, highways, ports, &c. are, ſince the introduction of feus, held to be *inter regalia*, or *in patrimonio principis;* and hence encroachment upon a highway is ſaid to infer purpreſture. No perſon has a right of a free port without a ſpecial grant, which implies a power in the grantee to levy anchorage and ſhore dues, and an obligation upon him to uphold the port in good condition. In this claſs of things, our forefathers reckoned fortalices, or ſmall places of ſtrength, originally built for the defence of the country, either againſt foreign invaſions or civil commotions; but theſe now paſs with the lands in every charter.

Pertinents.

6. The vaſſal acquires right by his grant, not only to the lands ſpecially contained in the charter, but to thoſe that have been poſſeſſed 40 years as pertinent thereof. But, 1. If the lands in the grant are marked out by ſpecial limits, the vaſſal is circumſcribed by the tenor of his own right, which excludes every ſubject without theſe limits from being pertinent of the lands. 2. A right poſſeſſed under an expreſs infeſtment is preferable, *cæteris paribus*, to one poſſeſſed only as pertinent. 3. Where neither party is infeſt *per expreſſum*, the mutual promiſcuous poſſeſſion by both, of a ſubject as pertinent, reſolves into a commonty of the ſubject poſſeſſed: but if one of the parties has exerciſed all the acts of property of which the ſubject was capable, while the poſſeſſion of the other was confined to paſturage only, or to caſting ſeal and divot, the firſt is to be deemed ſole proprietor, and the other to have merely a right of ſervitude.

Privileges of barony.

7. As barony is a *nomem univerſitatis*, and unites the ſeveral parts contained in it into one individual right, the general conveyance of a barony carries with it all the different tenements of which it conſiſts, though they ſhould not be ſpecially enumerated (and this holds, even without erection into a barony, in lands that have been united under a ſpecial name). Hence, likewiſe, the poſſeſſion by the vaſſal of the ſmalleſt part of the barony-lands preſerves to him the right of the whole.

8. The vaſſal is intitled, in conſequence of his property, to levy the rents of his own lands, and to recover them from his tenants by an action for rent before his own court; and from all other poſſeſſors and intromitters, by an action of mails and duties before the ſheriff. He can alſo remove from his lands, tenants who have no leaſes; and he can grant tacks or leaſes to others. A tack is a contract or location, whereby the uſe of land, or any other immoveable ſubject, is ſet to the leſſee or tackſman for a certain yearly rent, either in money, the fruits of the ground, or ſervices. It ought to be reduced into writing, as it is a right concerning lands: tacks, therefore, that are given verbally, to endure for a term of years, are good againſt neither party for more than one year. An obligation to grant a tack is as effectual againſt the granter as a formal tack. A liferenter, having a temporary property in the fruits, may grant tacks to endure for the term of his own liferent.

Tack or leaſe.

9. The tackſman's right is limited to the fruits which ſpring up annually from the ſubject ſet, either naturally, or by his own induſtry; he is not therefore intitled to any of the growing timber above ground, and far leſs to the minerals, coal, clay, &c. under ground, the uſe of which conſumes the ſubſtance. Tacks are, like other contracts, perſonal rights in their own nature; and conſequently ineffectual againſt ſingular ſucceſſors in the lands; but, for the encouragement of agriculture, they were, by act 1449, declared effectual to the tackſman for the full time of their endurance, into whoſe hands ſoever the lands might come.

10. To give a written tack the benefit of this ſtatute,

it muſt mention the ſpecial tack-duty payable to the proprietor, which though ſmall, if it be not eluſory, ſecures the tackſman; and it muſt be followed by poſſeſſion, which ſupplies the want of a ſeiſie. If a tack does not expreſs the term of entry, the entry will commence at the next term after its date, agreeable to the rule, *Quod pure debetur, præſenti die debetur.* If it does not mention the iſh, *i. e.* the term at which it is to determine, it is good for one year only; but, if the intention of parties to continue it for more than one year, ſhould appear from any clauſe in the tack (*e. g.* if the tackſman ſhould be bound to certain annual preſtations), it is ſuſtained for two years as the *minimum.* Tacks granted to perpetuity, or with an indefinite iſh, have not the benefit of the ſtatute. Tacks of houſes within boroughs do not fall within this act, it being cuſtomary to let theſe from year to year.

Tacks are *ſtricti juris.*

11. Tacks neceſſarily imply a *delectus perſonæ*, a choice by the ſetter of a proper perſon for his tenant. Hence the conveyance of a tack which is not granted to aſſignees, is ineffectual without the landlord's conſent. A right of tack, though it be heritable, falls under the *jus mariti*, becauſe it cannot be ſeparated from the labouring cattle and implements of tillage, which are moveable ſubjects. A tack, therefore, granted to a ſingle woman, without the liberty of aſſigning, falls by her marriage; becauſe the marriage, which is a legal conveyance thereof to the huſband, cannot be annulled This implied excluſion of aſſignees is, however, limited to voluntary, and does not extend to neceſſary, aſſignments; as an adjudication of a tack by the tackſman's creditor: but a tack, expreſsly excluding aſſignees, cannot be carried even by adjudication. It was not a fixed point for a long time, whether a tenant could ſubſet without conſent of the landlord; but the court of ſeſſion, in a caſe which occurred a few years ago, denied the power of ſubſetting in the tenant. Liferent tacks, becauſe they import a higher degree of right in the tackſman than tacks for a definite term, may be aſſigned, unleſs aſſignees be ſpecially excluded.

Tacit relocation.

12. If neither the ſetter nor tackſman ſhall properly diſcover their intention to have the tack diſſolved at the term fixed for its expiration, they are underſtood, or preſumed, to have entered into a new tack upon the ſame terms with the former, which is called *tacit relocation;* and continues till the landlord warns the tenant to remove, or the tenant renounces his tack to the landlord: this obtains alſo in the caſe of moveable tenants, who poſſeſs from year to year without written tacks. In judicial tacks, however, by the court of ſeſſion, tacit relocation neither does nor can take place; for cautioners being interpoſed to theſe, they are looſed at the end of the tack: and therefore, where judicial tackſmen poſſeſs after expiry of their right, they are accountable as factors.

13. In tacks of land, the ſetter is commonly bound to put all the houſes and office-houſes, neceſſary for the farm, in good condition at the tenant's entry; and the tenant muſt keep them and leave them ſo at his removal. But in tacks of houſes, the ſetter muſt not only deliver to the tenant the ſubject ſet, in tenantable repair at his entry, but uphold it in that repair during the whole years of the tack, unleſs it is otherwiſe covenanted betwixt the parties.

14. If the inclemency of the weather, inundation, or calamity of war, ſhould have brought upon the crop an extraordinary damage (*plus quam tolerabile*), the landlord had, by the Roman law, no claim for any part of the tack-duty: if the damage was more moderate, he might exact the full rent. It is no where defined, what degree of ſterility or devaſtation makes a loſs *plus quam tolerabile;* but the general rule of the Roman law ſeems to be made ours. Tenants are not obliged to pay any public burdens to which they are not expreſsly bound by their tack, except mill-ſervices.

Deſtitution of tacks.

15 Tacks may be evacuated during their currency, (1.) In the ſame manner as feu-rights, by the tackſman's running in arrear of his tack-duty for two years together. This irritancy may be prevented by the tenant's making payment at the bar before ſentence. (2.) Where the tenant either runs in arrear of one year's rent, or leaves his farm uncultivated at the uſual ſeaſon; in which caſe he may, by act of ſederunt 1756, be ordained to give ſecurity for the arrears, and for the rent of the five following crops, if the tack ſhall ſubſiſt ſo long; otherwiſe, to remove, as if the tack were at an end. (3.) Tacks may be evacuated at any time by the mutual conſent of parties.

Warnings.

16. The landlord, when he intends to remove a tenant whoſe tack is expiring, or who poſſeſſes without a tack, muſt, upon a precept ſigned by himſelf, warn the tenant forty days preceding the term of Whitſunday, at or immediately preceding the iſh, perſonally, or at his dwelling-houſe, to remove at that term, with his family and effects. This precept muſt be alſo executed on the ground of the lands, and thereafter read in the pariſh-church where the lands lie, after the morning ſervice, and affixed to the moſt patent door thereof. Whitſunday, though it be a moveable feaſt, is, in queſtions of removing, fixed to the 15th of May. In warnings from tenements within borough, it is ſufficient that the tenant be warned forty days before the iſh of the tack, whether it be Whitſunday or Martinmas; and in theſe the ceremony of chalking the door is ſuſtained as warning, when proceeding upon a verbal order from the proprietor.

17. This proceſs of warning was preciſely neceſſary for founding an action of removing againſt tenants, till the act of ſederunt 1756, which leaves it in the option of the proprietor, either to uſe the former method, or to bring his action of removing before the judge-ordinary; which if it be called 40 days before the ſaid term of Whitſunday, ſhall be held as equal to a warning. Where the tenant is bound, by an expreſs clauſe of his tack, to remove at the iſh without warning, ſuch obligation is, by the ſaid act, declared to be a ſufficient warrant for letters of horning, upon which, if the landlord charge his tenant forty days before the ſaid Whitſunday, the judge is authoriſed to eject him within ſix days after the term of removing expreſſed in the tack.

Actions of removing.

18. Actions of removing might, even before this act of ſederunt, have been purſued without any previous warning (1.) Againſt vicious poſſeſſors, *i. e.* perſons who had ſeized the poſſeſſion by force, or who, without any legal title, had intruded into it, after the laſt poſſeſſor had given it up. (2.) Againſt poſſeſſors who had a naked tolerance. (3.) Againſt tenants who had run

in arrear of rent, during the currency of their tacks. (4.) Againſt ſuch as had ſold their lands, and yet continued to poſſeſs after the term of the purchaſer's entry. Upon the ſame ground, warning was not required, in removings againſt poſſeſſors of liferented lands, after the death of the liferenter who died in the natural poſſeſſion: but if he poſſeſſed by tenants, theſe tenants could not be diſturbed in their poſſeſſions till the next Whitſunday, that they might have time to look out for other farms; but they might be compelled to remove at that term, by an action of removing, without warning.

19. A landlord's title in a removing, let it be ever ſo lame, cannot be brought under queſtion by a tenant whoſe tack flows immediately from him; but, if he is to inſiſt againſt tenants not his own, his right muſt be perfected by infeftment, unleſs it be ſuch as requires no infeftment; as terce, &c.

Violent profits.

20. The defender, in a removing, muſt (by act 1555), before offering any defence which is not inſtantly verified, give ſecurity to pay to the ſetter the *violent profits*, if they ſhould be awarded againſt him. Theſe are ſo called, becauſe the law conſiders the tenant's poſſeſſion after the warning as violent. They are eſtimated, in tenements within borough, to double the rent; and in lands, to the higheſt profits the purſuer could have made of them, by poſſeſſing them either by a tenant or by himſelf.

Effect of warning not inſiſted on.

21. If the action of removing ſhall be paſſed from, or if the landlord ſhall, after uſing warning, accept of rent from the tenant, for any term ſubſequent to that of the removal, he is preſumed to have changed his mind, and tacit relocation takes place. All actions of removing againſt the principal or original tackſman, and decrees thereupon, if the order be uſed, which is ſet forth *ſupra* (17.), are, by the act of ſederunt 1756, declared to be effectual againſt the aſſignees to the tack or ſubtenants.

Hypothec.

22. The landlord has, in ſecurity of his tack-duty, over and above the tenant's perſonal obligation, a tacit pledge or hypothec, not only on the fruits, but on the cattle paſturing on the ground. The corn, and other fruits, are hypothecated for the rent of that year whereof they are the crop; for which they remain affected, though the landlord ſhould not uſe his right for years together. In virtue of this hypothec, the landlord is intitled to a preference over any creditor, though he has actually uſed a poinding; except in the ſpecial caſe, that the poinding is executed after the term of payment, when the landlord can appropriate the crop for his payment, the poinder in ſuch caſe being obliged to leave as much on the ground as to ſatiſfy the landlord's hypothec: and it has been lately found, that this right of the landlord is preferable even to a debt due to the crown, for which a writ of extent had been iſſued: but the caſe here alluded to is preſently under appeal.

23. The whole cattle on the ground, conſidered as a quantity, are hypothecated for a year's rent, one after another ſucceſſively. The landlord may apply this hypothec for payment of the paſt year's rent, at any time within three months from the laſt conventional term of payment, after which it ceaſes for that year. As the tenant may increaſe the ſubject of this hypothec, by purchaſing oxen, ſheep, &c. ſo he can impair it, by ſelling part of his ſtock; but if the landlord ſuſpects the tenant's management, he may, by ſequeſtration or poinding, make his right, which was before general upon the whole ſtock, ſpecial upon every individual. A ſuperior has alſo a hypothec for his feu-duty, of the ſame kind with that juſt explained.

24. In tacks of houſes, breweries, ſhops, and other tenements, which have no natural fruits, the furniture and other goods brought into the ſubject ſet are hypothecated to the landlord for one year's rent. But the tenant may by ſale impair this hypothec, as he might that of cattle in rural tenements; and indeed, in the particular caſe of a ſhop, the tenant rents it for no other purpoſe than as a place of ſale.

SECT. VII. *Of the tranſmiſſion of rights, by confirmation and reſignation.*

clxviii.

Tranſmiſſion of feudal rights.

A VASSAL may tranſmit his feu either to univerſal ſucceſſors, as heirs; or to ſingular ſucceſſors, *i. e.* thoſe who acquire by gift, purchaſe, or other ſingular title. This laſt ſort of tranſmiſſion is either voluntary, by diſpoſition; or neceſſary, by adjudication.

2. By the firſt feudal rules, no ſuperior could be compelled to receive any vaſſal in the lands, other than the heir expreſſed in the inveſtiture; for the ſuperior alone had the power of aſcertaining to what order of heirs the fee granted by himſelf was to deſcend. But this right of refuſal in the ſuperior did not take place, (1.) In the caſe of creditors appriſers or adjudgers, whom ſuperiors were obliged to receive upon payment of a year's rent (1469, c. 37. 1672, c. 19.): (2.) In the caſe of purchaſers of bankrupt eſtates, who were put on the ſame footing with adjudgers by 1690, c. 20. The crown refuſes no voluntary diſponee, on his paying a compoſition to the exchequer of a ſixth part of the valued rent Now, by 20 Geo. II. ſuperiors are directed to enter all ſingular ſucceſſors (except incorporations) who ſhall have got from the vaſſal a diſpoſition, containing procuratory of reſignation; they always receiving the fees or caſualties that law intitles them to on a vaſſal's entry, *i. e.* a year's rent (A).

Baſe rights.

3. Baſe rights, *i. e.* diſpoſitions to be holden of the diſponer, are tranſmiſſions only of the property, the ſuperiority remaining as formerly. As this kind of right might, before eſtabliſhing the regiſters, have been kept quite concealed from all but the granter and receiver, public right was preferable to it, unleſs cloathed

---

(A) It was long matter of doubt how this compoſition due to the ſuperior upon the entry of ſingular ſucceſſors ſhould be regulated. The matter at laſt received a ſolemn deciſion; finding, That the ſuperior is intitled, for the entry of ſingular ſucceſſors, in all caſes where ſuch entries are not taxed, to a year's rent of the ſubject, whether lands or houſes, as the ſame are ſet, or may be ſet at the time; deducting the feu-duty and all public burdens, and likewiſe all annual burdens impoſed on the lands by conſent of the ſuperior, with all reaſonable annual repairs to houſes and other periſhable ſubjects.

cloathed with poſſeſſion: but as this diſtinction was no longer neceſſary after the eſtabliſhment of the records, all infeſtments are declared preferable, according to the dates of their ſeveral regiſtrations; without reſpect to the former diſtinction of baſe and public, or of being cloathed and not cloathed with poſſeſſion.

Public rights.

4. Public rights, *i. e.* diſpoſitions to be holden of the granter's ſuperior, may be perfected either by confirmation or reſignation; and therefore they generally contain both precept of ſeiſin and procuratory of reſignation. When the receiver is to complete his right in the firſt way, he takes ſeiſin upon the precept: but ſuch ſeiſin is ineffectual without the ſuperior's confirmation; for the diſponee cannot be deemed a vaſſal till the ſuperior receive him as ſuch, or confirm the holding. By the uſual ſtyle in the tranſmiſſion of lands, the diſpoſition contains an obligation and precept of infeftment, both *a me* and *de me*, in the option of the diſponee; upon which, if ſeiſin is taken indefinitely, it is conſtrued in favour of the diſponee to be a baſe infeſtment, becauſe a public right is null without confirmation: but if the receiver ſhall afterwards obtain the ſuperior's confirmation, it is conſidered as if it had been from the beginning a public right.

Preference in confirmation.

5. Where two ſeveral public rights of the ſame ſubject are confirmed by the ſuperior, their preference is governed by the dates of the confirmations, not of the infeſments confirmed; becauſe it is the confirmation which completes a public right.

Effect of confirmation.

6. Though a public right becomes, by the ſuperior's confirmation, valid from its date; yet if any mid impediment intervene betwixt that period and the confirmation, to hinder the two from being conjoined, *e. g.* if the granter of a public right ſhould afterwards grant a baſe right to another, upon which ſeiſin is taken before the ſuperior's confirmation of the firſt, the confirmation will have effect only from its own date; and conſequently the baſe right firſt completed will carry the *property* of the lands preferable to the public one.

Reſignations.

7. Reſignation is that form of law, by which a vaſſal ſurrenders his feu to his ſuperior; and it is either *ad perpetuam remanentiam*, or *in favorem*. In reſignations *ad remanentiam*, where the feu is reſigned, to the effect that it may remain with the ſuperior, the ſuperior, who before had the ſuperiority, acquires, by the reſignation, the property alſo of the lands reſigned: and as his infeſtment in the lands ſtill ſubſiſted, notwithſtanding the right by which he had given his vaſſal the property; therefore, upon the vaſſal's reſignation, the ſuperior's right of property revives, and is conſolidated with the ſuperiority, without the neceſſity of a new infeſtment; but the inſtrument of reſignation muſt be recorded.

8. Reſignations *in favorem* are made, not with an intention that the property reſigned ſhould remain with the ſuperior, but that it ſhould be again given by him, in favour either of the reſigner himſelf, or of a third party; conſequently the fee remains in the reſigner, till the perſon in whoſe favour reſignation is made gets his right from the ſuperior perfected by ſeiſin. And becauſe reſignations *in favorem* are but incomplete perſonal deeds, the law has made no proviſion for recording them. Hence, the firſt ſeiſin on a ſecond reſignation is preferable to the laſt ſeiſin upon the firſt reſignation; but the ſuperior, accepting a ſecond reſignation, whereupon a prior ſeiſin may be taken in prejudice of the firſt reſignatory, is liable in damages.

9. By former deciſions, one who was veſted with a perſonal right of lands, *i. e.* a right not completed by ſeiſin, effectually diveſted himſelf by diſponing it to another; after which no right remained in the diſponer, which could be carried by a ſecond diſpoſition, becauſe a perſonal right is no more than a *jus obligationis*, which may be transferred by any deed ſufficiently expreſſing the will of the granter. But this doctrine, at the ſame time that it rendered the ſecurity of the records extremely uncertain, was not truly applicable to ſuch rights as required ſeiſin to complete them; and therefore it now obtains, that the granter even of a perſonal right of lands is not ſo diveſted by conveying the right to one perſon, but that he may effectually make it over afterwards to another; and the preference between the two does not depend on the dates of the diſpoſitions, but on the priority of the ſeiſins following upon them.

Sect. VIII. *Of Redeemable Rights.*

clxix.

Reverſion legal.

An heritable right is ſaid to be redeemable, when it contains a right of reverſion, or return, in favour of the perſon from whom the right flows. Reverſions are either legal, which ariſe from the law itſelf, as in adjudications, which law declares to be redeemable within a certain term after their date; or conventional, which are conſtituted by the agreement of parties, as in wadſets, rights of annualrent, and rights in ſecurity. A wadſet (from wad or pledge) is a right, by which lands, or other heritable ſubjects, are impignorated by the proprietor to his creditor in ſecurity of his debt; and, like other heritable rights, is perfected by ſeiſin. The debtor, who grants the wadſet, and has the right of reverſion, is called the *reverſer*; and the creditor, receiver of the wadſet, is called the *wadſetter*.

Wadſet.

2. Wadſets, by the preſent practice, are commonly made out in the form of mutual contracts, in which one party ſells the land, and the other grants the right of reverſion. When the right of reverſion is thus incorporated in the body of the wadſet, it is effectual without regiſtration; becauſe the ſingular ſucceſſor in the wadſet is, in that caſe, ſufficiently certified of the reverſion, though it be not regiſtered, by looking into his own right, which bears it *in gremio*. But where the right of reverſion is granted in a ſeparate writing, it is ineffectual againſt the ſingular ſucceſſor of the wadſetter, unleſs it be regiſtered in the regiſter of ſeiſins within 60 days after the date of the ſeiſin upon the wadſet.

Reverſion is *ſtricti juris*.

3. Rights of reverſion are generally eſteemed *ſtricti juris*; yet they go to heirs, though heirs ſhould not be mentioned, unleſs there be ſome clauſe in the right, diſcovering the intention of parties, that the reverſion ſhould be perſonal to the reverſer himſelf. In like manner, though the right ſhould not expreſs a power to redeem from the wadſetter's heir, as well as from himſelf, redemption will be competent againſt the heir. All the lawyers have affirmed, that reverſions cannot be

be aſſigned, unleſs they are taken to aſſignees; but from the favour of legal diligence, they may be adjudged.

Redemption.

4. Reverſions commonly leave the reverſer at liberty to redeem the lands *quandocunque*, without reſtriction in point of time; but a clauſe is adjected to ſome reverſions, that if the debt be not paid againſt a determinate day, the right of the reverſion ſhall be irritated, and the lands ſhall become the irredeemable property of the wadſetter. Nevertheleſs, the irritancy being penal, as in wadſets, where the ſum lent falls always ſhort of the value of the lands, the right of redemption is by indulgence continued to the reverſer, even after the term has expired, while the irritancy is not declared. But the reverſer, if he does not take the benefit of this indulgence within 40 years after the lapſe of the term, is cut out of it by preſcription.

5. If the reverſer would redeem his lands, he muſt uſe an order of redemption againſt the wadſetter: the firſt ſtep of which is premonition (or notice given under form of inſtrument) to the wadſetter, to appear at the time and place appointed by the reverſion, then and there to receive payment of his debt, and thereupon to renounce his right of wadſet. In the voluntary redemption of a right of wadſet holden baſe, a renunciation duly regiſtered re-eſtabliſhes the reverſer in the full right of the lands. Where the wadſet was granted to be holden of the granter's ſuperior, the ſuperior muſt receive the reverſer, on payment of a year's rent, if he produce a diſpoſition from the wadſetter, containing procuratory of reſignation. If, at executing the wadſet, the ſuperior has granted letters of regreſs, *i. e.* an obligation again to enter the reverſer upon redemption of the lands, he will be obliged to receive him, without payment of the year's rent. But letters of regreſs will not have this effect againſt ſingular ſucceſſors in the ſuperiority, if they are not regiſtered in the regiſter of reverſions. All wadſets that remain perſonal rights, are extinguiſhed by ſimple diſcharges, though they ſhould not be recorded.

Letters of regreſs.

Redemption money

6. If the wadſetter either does not appear at the time and place appointed, or refuſes the redemption-money, the reverſer muſt conſign it under form of inſtrument, in the hands of the perſon appointed in the right of reverſion; or, if no perſon be named, in the hands of the clerk to the bills, a clerk of ſeſſion, or any reſponſal perſon. An inſtrument of conſignation, with the conſignatory's receipt of the money conſigned, completes the order of redemption, ſtops the farther currency of intereſt againſt the reverſer, and founds in him an action for declaring the order to be formal, and the lands to be redeemed in conſequence of it.

7. After decree of declarator is obtained, by which the lands are declared to return to the debtor, the conſigned money, which comes in place of the lands, becomes the wadſetter's, who therefore can charge the conſignatory upon letters of horning to deliver it up to him; but, becauſe the reverſer may, at any time before decree, paſs from his order, as one may do from any other ſtep of diligence, the conſigned ſums continue to belong to the reverſer, and the wadſetter's intereſt in the wadſet continues heritable till that period.

8. If the wadſetter chooſes to have his money rather than the lands, he muſt require from the reverſer, under form of inſtrument, the ſums due by the wadſet, in terms of the right. The wadſet-ſums continue heritable, notwithſtanding requiſition, which may be paſſed from by the wadſetter even after the reverſer has conſigned the redemption-money in conſequence thereof.

Wadſets proper and improper.

9. Wadſets are either proper or improper. A proper wadſet is that whereby it is agreed, that the uſe of the land ſhall go for the uſe of the money; ſo that the wadſetter takes his hazard of the rents, and enjoys them without accounting, in ſatisfaction, or *in ſolutum* of his intereſt.

10. In an improper wadſet, the reverſer, if the rent ſhould fall ſhort of the intereſt, is taken bound to make up the deficiency; if it amounts to more, the wadſetter is obliged to impute the excreſcence towards extinction of the capital: And, as ſoon as the whole ſums, principal and intereſt, are extinguiſhed by the wadſetter's poſſeſſion, he may be compelled to renounce, or diveſt himſelf in favour of the reverſer.

11. If the wadſetter be intitled by his right to enjoy the rents without accounting, and if at the ſame time the reverſer be ſubject to the hazard of their deficiency, ſuch contract is juſtly declared uſurious: and alſo in all proper wadſets wherein any unreaſonable advantage has been taken of the debtor, the wadſetter muſt (by act 1661), during the not requiſition of the ſum lent, either quit his poſſeſſion to the debtor, upon his giving ſecurity to pay the intereſt, or ſubject himſelf to account for the ſurplus-rents, as in improper wadſets.

Right of annualrent.

12. Infeftments of annual rent, the nature of which has been explained, are alſo redeemable rights. A right of annual rent does not carry the property of the lands; but it creates a real *nexus* or burden upon the property, for payment of the intereſt or annualrent contained in the right; and conſequently the bygone intereſts due upon it are *debita fundi*. The annualrenter may therefore either inſiſt in a real action for obtaining letters of poinding the ground, or ſue the tenant in a perſonal action towards the payment of his paſt intereſt: and in a competition for thoſe rents, the annualrenter's preference will not depend on his having uſed a poinding of the ground, for his right was completed by the ſeiſin; the power of poinding the ground, ariſing from that antecedent right, is *meræ facultatis*, and need not be exerciſed, if payment can be otherwiſe got. As it is only the intereſt of the ſum lent which is a burden upon the lands, the annualrenter, if he wants his principal ſum, cannot recover it either by poinding or by a perſonal action againſt the debtor's tenants; but muſt demand it from the debtor himſelf, on his perſonal obligation in the bond, either by requiſition, or by a charge of letters of horning, according as the right is drawn.

13. Rights of annualrent, being ſervitudes upon the property, and conſequently conſiſtent with the right of property in the debtor, may be extinguiſhed without reſignation.

Rights of ſecurity.

14. Infeftments in ſecurity are another kind of redeemable rights (now frequently uſed in place of rights of annualrent), by which the receivers are infeſt in the lands themſelves, and not ſimply in an annualrent forth of them, for ſecurity of the principal ſums, intereſt,

and penalty, contained in the rights. If an infeftment in ſecurity be granted to a creditor, he may thereupon enter into the immediate poſſeſſion of the lands or annualrent for his payment. They are extinguiſhed as rights of annualrent.

15. All rights of annualrent, rights in ſecurity, and generally whatever conſtitutes a real burden on the fee, may be the ground of an adjudication, which is preferable to all adjudications, or other diligences, intervening between the date of the right and of the adjudication deduced on it; not only for the principal ſum contained in the right, but alſo for the whole paſt intereſt contained in the adjudication. This preference ariſes from the nature of real debts, or *debita fundi:* but in order to obtain it for the intereſt of the intereſt accumulated in the adjudication, ſuch adjudication muſt proceed on a proceſs of poinding the ground.

clxx.

Sect. IX. *Of Servitudes.*

Different kinds of ſervitude.

Servitude is a burden affecting lands, or other heritable ſubjects, whereby the proprietor is either reſtrained from the full uſe of what is his own, or is obliged to ſuffer another to do ſomething upon it. Servitudes are either *natural*, *regal*, or *conventional*. *Nature* itſelf may be ſaid to conſtitute a ſervitude upon inferior tenements, whereby they muſt receive the water that falls from thoſe that ſtand on higher ground. *Legal* ſervitudes are eſtabliſhed by ſtatute or cuſtom, from conſiderations of public policy; among which may be numbered the reſtraints laid upon the proprietors of tenements within the city of Edinburgh. There is as great a variety of *conventional* ſervitudes, as there are ways by which the exerciſe of property may be reſtrained by paction in favour of another.

2. *Conventional* ſervitudes are conſtituted, either by grant, where the will of the party burdened is expreſſed in writing: or by preſcription, where his conſent is preſumed from his acquieſcence in the burden for 40 years. A ſervitude conſtituted by writing, or grant, is not effectual againſt the granter's ſingular ſucceſſors, unleſs the grantee has been in the uſe or exerciſe of his right: but they are valid againſt the granter and his heirs, even without uſe. In ſervitudes that may be acquired by preſcription, 40 years exerciſe of the right is ſufficient, without any title in writing, other than a charter and ſeiſin of the lands to which the ſervitude is claimed to be due.

3. Servitudes conſtituted by grant are not effectual, in a queſtion with the ſuperior of the tenement burdened with the ſervitude, unleſs his conſent be adhibited; for a ſuperior cannot be hurt by his vaſſal's deed: but where the ſervitude is acquired by preſcription, the conſent of the ſuperior, whoſe right afforded him a good title to interrupt, is implied. A ſervitude by grant, though followed only by a partial poſſeſſion, muſt be governed, as to its extent, by the tenor of the grant; but a ſervitude by preſcription is limited by the meaſure or degree of the uſe had by him who preſcribes: agreeably to the maxim, *Tantum præſcriptum, quantum poſſeſſum.*

Predial ſervitudes.

4. Servitudes are either *predial* or *perſonal*. *Predial* ſervitudes are burdens impoſed upon one tenement, in favour of another tenement. That to which the ſervitude is due is called the *dominant*, and that which owes it is called the *ſervient tenement*. No perſon can have right to a predial ſervitude, if he is not proprietor of ſome dominant tenement that may have benefit by it; for that right is annexed to a tenement, and ſo cannot paſs from one perſon to another, unleſs ſome tenement goes along with it.

Rural ſervitudes.

5. Predial ſervitudes are divided into *rural* ſervitudes, or of lands; and *urban* ſervitudes, or of houſes. The rural ſervitudes of the Romans were *iter*, *actus*, *via*, *aquæductus*, *aquæhauſtus*, and *jus paſcendi pecoris*. Similar ſervitudes may be conſtituted of a foot-road, horſe-road, cart-road, dams, and aqueducts, watering of cattle, and paſturage. The right of a highway is not a ſervitude conſtituted in favour of a particular tenement, but is a right common to all travellers. The care of high-ways, bridges, and ferries, is committed to the ſheriffs, juſtices of peace, and commiſſioners of ſupply in each ſhire.

6. Common paſturage, or the right of feeding one's cattle upon the property of another, is ſometimes conſtituted by a general clauſe of paſturage in a charter or diſpoſition, without mentioning the lands burdened; in which caſe, the right comprehends whatever had been formerly appropriated to the lands diſponed out of the granter's own property, and likewiſe all paſturage due to them out of other lands. When a right of paſturage is given to ſeveral neighbouring proprietors, on a moor or common belonging to the granter, indefinite as to the number of cattle to be paſtured, the extent of their ſeveral rights is to be proportioned according to the number that each of them can fodder in winter upon his own dominant tenement.

Urban ſervitudes.

7. The chief ſervitudes of houſes among the Romans were thoſe of ſupport, viz. *tigni immittendi*, and *oneris ferendi*. The firſt was the right of fixing in our neighbours wall a joiſt or beam from our houſe: the ſecond was that of reſting the weight of one's houſe upon his neighbour's wall.

8. Where different floors or ſtories of the ſame houſe belong to different perſons, as is frequent in the city of Edinburgh, the property of the houſe cannot be ſaid to be entirely divided; the roof remains a common roof to the whole, and the area on which the houſe ſtands ſupports the whole; ſo that there is a communication of property, in conſequence of which the proprietor of the ground-floor muſt, without the conſtitution of any ſervitude, uphold it for the ſupport of the upper, and the owner of the higheſt ſtory muſt uphold that as a cover to the lower. When the higheſt floor is divided into garrets among the ſeveral proprietors, each proprietor is obliged, according to this rule, to uphold that part of the roof which covers his own garret.

9. No proprietor can build, ſo as to throw the rain-water falling from his own houſe, immediately upon his neighbour's ground, without a ſpecial ſervitude, which is called of *ſtillicide*; but, if it falls within his own property, though at the ſmalleſt diſtance from the march, the owner of the inferior tenement muſt receive it.

10. The ſervitudes *altius non tollendi, et non officiendi luminibus vel proſpectui*, reſtrain proprietors from raiſing their houſes beyond a certain height, or from making any building whatſoever that may hurt the light

or proſpect of the dominant tenement. Theſe ſervitudes cannot be conſtituted by preſcription alone: for, though a proprietor ſhould have his houſe ever ſo low, or ſhould not have built at all upon his grounds for 40 years together, he is preſumed to have done ſo for his own conveniency or profit; and therefore cannot be barred from afterwards building a houſe on his property, or raiſing it to what height he pleaſes, unleſs he be tied down by his own conſent.

Servitude of feal and divot.

11. There are two predial ſervitudes to which the Romans were ſtrangers, viz. that of fuel or feal and divot, and thirlage. The firſt is a right, by which the owner of the dominant tenement may turn up peats, turfs, feals, or divots, from the ground of the ſervient, and carry them off either for fuel, or thatch, or the other uſes of his own tenement.

Thirlage.

12. THIRLAGE is that ſervitude, by which lands are aſtricted, or thirled, to a particular mill; and the poſſeſſors bound to grind their grain there, for payment of certain multures and ſequels as the agreed price of grinding. In this ſervitude, the mill is the dominant tenement, and the lands aſtricted (which are called alſo the *thirl* or *ſucken*) the ſervient. Multure is the quantity of grain or meal payable to the proprietor of the mill, or to the multerer his tackſman. The ſequels are the ſmall quantities given to the ſervants, under the name of *knaveſhip*, *bannock*, and *lock* or *gowpen*. The quantities paid to the mill by the lands not aſtricted, are generally proportioned to the value of the labour, and are called *out town* or *out ſucken multures*; but thoſe paid by the thirl are ordinarily higher, and are called *in town* or *in ſucken multures*.

13. Thirlage may be conſtituted by a land-holder, when, in the diſpoſition of certain lands, he aſtricts them to his own mill; or when, in the diſpoſition of a mill, he aſtricts his own lands to the mill diſponed; or when, in letting his lands, he makes it a condition in the tacks. The grant of a mill with the general clauſe of multures, without ſpecifying the lands aſtricted, conveys the thirlage of all the lands formerly aſtricted to that mill, whether they were the property of the granter, or of a third party.

14. A leſs formal conſtitution ſerves to aſtrict barony-lands to the mill of the barony, than is neceſſary in any other thirlage; which perhaps proceeds from the effects of the union betwixt the two. Hence, if a baron makes over the mill of a barony *cum multuris*, or *cum aſtrictis multuris*, it infers an aſtriction of the barony lands to the mill conveyed, although they had not formerly been aſtricted. But if, prior to the baron's conveyance of his mill *cum multuris*, he had ſold any part of the barony-lands to another *cum multuris*, the firſt Purchaſer's lands are not aſtricted by the poſterior grant; for a right of lands with the multures, implies a freedom of theſe lands from thirlage.

15 Thirlage is either, 1. Of grindable corns: or, 2. Of all growing corns; or, 3. Of the *invecta et illata*, i. e. of all the grain brought within the thirl, though of another growth. Where the thirlage is of grindable grain, it is in practice reſtricted to the corns which the tenants have occaſion to grind, either for the ſupport of their families, or for other uſes; the ſurplus may be carried out of the thirl unmanufactured, without being liable in multure. Where it is of the *grana creſcentia*, the whole grain growing upon the thirl is aſtricted, with the exceptions, 1. Of ſeed and horſe-corn, which are deſtined to uſes inconſiſtent with grinding; and, 2. Of the farm duties due to the landlord, if they are delivered in grain not grinded. But, if the rent be payable in meal, flour, or malt, the grain of which theſe are made muſt be manufactured in the dominant mill.

16. The thirlage of *invecta et illata* is ſeldom conſtituted but againſt the inhabitants of a borough or village, that they ſhall grind all the unmanufactured grain they import thither at the dominant mill. Multure, therefore, cannot be exacted in a thirlage of *invecta et illata*, for flour or oat-meal brought into the ſervient tenement, unleſs the importer had bought it in grain, and grinded it at another mill. The ſame grain that owes multure, as *granum creſcens*, to the mill in whoſe thirl it grew, if it ſhall be afterwards brought within a borough where the *invecta et illata* are thirled, muſt pay a ſecond multure to the proprietor of that dominant tenement; but, where the right of theſe two thirlages is in the ſame proprietor, he cannot exact both. Where lands are thirled in general terms, without expreſſing the particular nature of the ſervitude, the lighteſt thirlage is preſumed, from the favour of liberty; but in the aſtriction of a borough or village, where there is no growing grain which can be the ſubject of thirlage, the aſtriction of *invecta et illata* muſt be neceſſarily underſtood.

17. Thirlage, in the general caſe, cannot be eſtabliſhed by preſcription alone, for *iis quæ ſunt meræ facultatis non preſcribitur*; but where one has paid for 40 years together the heavy inſucken multures, the ſlighteſt title in writing will ſubject his lands. Thirlage may, contrary to the common rule, be conſtituted by preſcription alone, 1. Where one pays to a mill a certain ſum, or quantity of grain yearly, in name of multure, whether he grinds at it or not (called *dry multure*). 2. In mills of the king's property; which is conſtituted *jure coronæ*, without titles in writing; and, where he derives right from another, his titles are more liable to be loſt. This is extended in practice to mills belonging to church-lands, where thirty years poſſeſſion is deemed equivalent to a title in writing, from a preſumption that their rights were deſtroyed at the reformation. Though thirlage itſelf cannot be conſtituted by mere poſſeſſion, the proportion of multure payable to the dominant tenement may be ſo fixed.

18. The poſſeſſors of the lands aſtricted are bound to uphold the mill, repair the dam-dykes and aqueducts, and bring home the millſtones. Theſe ſervices, though not expreſſed in the conſtitution, are implied.

Servitudes are *ſtricti juris*.

19. Servitudes, being reſtraints upon property, are *ſtricti juris*: they are not therefore preſumed, if the acts upon which they are claimed can be explained conſiſtently with freedom; and, when ſervitudes are conſtituted, they ought to be uſed in the way leaſt burdenſome to the ſervient tenement. Hence, one who has a ſervitude of peats upon his neighbour's moſs, is not at liberty to extend it for the uſe of any manufacture which may require an extraordinary expence of fuel; but muſt confine it to the natural uſes of the dominant tenement.

20. Servitudes are extinguiſhed, (1.) *Confuſione*, when the perſon comes to be proprietor of the domi-

nant and ſervient tenements; for *res ſua nomini ſervit*, and the uſe the proprietor thereafter makes of the ſervient tenement is not *jure ſervitutis*, but is an act of property. (2) By the periſhing either of the dominant or ſervient tenement. (3.) Servitudes are loſt *non utendo*, by the dominant tenement neglecting to uſe the right for 40 years; which is conſidered as a dereliction of it, though he who has the ſervient tenement ſhould have made no interruption by doing acts contrary to the ſervitude.

Liferent.

21. *Perſonal* ſervitudes are thoſe by which the property of a ſubject is burdened, in favour, not of a tenement, but of a perſon. The only perſonal ſervitude known in law, is uſufruct or liferent; which is a right to uſe and enjoy a thing during life, the ſubſtance of it being preſerved. A liferent cannot therefore be conſtituted upon things which periſh in the uſe; and though it may upon ſubjects which gradually wear out by time, as houſehold furniture, &c. yet it is generally applied to heritable ſubjects. He whoſe property is burdened, is uſually called the *fiar*.

Liferents.

22. Liferents are divided into *conventional* and *legal*. *Conventional* liferents are either *ſimple*, or *by reſervation*. A *ſimple liferent*, or by a ſeparate conſtitution, is that which is granted by the proprietor in favour of another: And this ſort, contrary to the nature of predial ſervitudes, requires ſeiſin in order to affect ſingular ſucceſſors; for a liferent of lands is, in ſtrict ſpeech, not a ſervitude, but a right reſembling property which conſtitutes the liferenter vaſſal for life; and ſingular ſucceſſors have no way of diſcovering a liferent-right, which perhaps is not yet commenced, but by the records; whereas, in predial ſervitudes, the conſtant uſe of the dominant tenement makes them public. The proper right of liferent is intranſmiſſible; *oſſibus uſufructuarii inhæret*: When the profits of the liferented ſubject are tranſmitted to another, the right becomes merely perſonal: for it intitles the aſſignee to the rent, not during his own life, but his cedent's; and is therefore carried by ſimple aſſignation, without ſeiſin.

23. A liferent *by reſervation*, is that which a proprietor reſerves to himſelf in the ſame writing by which he conveys the fee to another. It requires no ſeiſin; for the granter's former ſeiſin, which virtually included the liferent, ſtill ſubſiſts as to the liferent which is expreſsly reſerved. In conjunct infeftments taken to huſband and wife, the wife's right of conjunct fee reſolves, in the general caſe, into a liferent.

Terce.

24. Liferents, *by law*, are the *terce* and the *curteſy*. The *terce (tertia)* is a liferent competent by law to widows, who have not accepted of ſpecial proviſions, in the third of the heritable ſubjects in which their huſbands died infeſt; and takes place only where the marriage has ſubſiſted for year and day, or where a child has been born alive of it (A).

25. The terce is not limited to lands, but extends to teinds, and to ſervitudes and other burdens affecting lands; thus, the widow is intitled, in the right of her terce, to a liferent of the third of the ſums ſecured, either by rights of annualrent, or by rights in ſecurity. In improper wadſets, the terce is a third of the ſum lent: In thoſe that are proper, it is a third of the wadſet lands; or, in caſe of redemption, a third of the redemption money. Neither rights of reverſion, ſuperiority, nor patronage, fall under the terce; for none of theſe have fixed profits, and ſo are not proper ſubjects for the widow's ſubſiſtence; nor tacks; becauſe they are not feudal rights. Burgage-tenements are alſo excluded from it, the reaſon of which is not ſo obvious. Since the huſband's ſeiſin is both the meaſure and ſecurity of the terce, ſuch debts or diligences alone, as exclude the huſband's ſeiſin, can prevail over it.

26. Where a terce is due out of lands burdened with a prior terce ſtill ſubſiſting, the ſecond tercer has only right to a third of the two thirds that remain unaffected by the firſt terce. But upon the death of the firſt widow, whereby the lands are diſburdened of her terce, the leſſer terce becomes enlarged, as if the firſt had never exiſted. A widow, who has accepted of a ſpecial proviſion from her huſband, is thereby excluded from the terce, unleſs ſuch proviſion ſhall contain a clauſe that ſhe ſhall have right to both.

27. The widow has no title of poſſeſſion, and ſo cannot receive the rents in virtue of her terce, till ſhe be ſerved to it; and in order to this, ſhe muſt obtain a brief out of the chancery, directed to the ſheriff, who calls an inqueſt, to take proof that ſhe was wife to the deceaſed, and that her huſband died infeſt in the ſubjects contained in the brief. The ſervice or ſentence of the jury, finding theſe points proved, does, without the neceſſity of a retour to the chancery, intitle the wife to enter into the poſſeſſion; but ſhe can only poſſeſs with the heir *pro indiviſo*, and ſo cannot remove tenants till the ſheriff kens her to her terce, or divides the lands between her and the heir. In this diviſion, after determining by lot or kavil, whether to begin by the ſun or the ſhade, *i. e.* by the eaſt or the weſt, the ſheriff ſets off the two firſt acres for the heir, and the third for the widow. Sometimes the diviſion is executed, by giving one entire farm to the widow, and two of equal value to the heir. The widow's right is not properly conſtituted by this ſervice; it was conſtituted before by the huſband's ſeiſin; and fixed by his death; the ſervice only declares it, and ſo intitles her to the third part of the rents *retro* to her huſband's death, preferable to any rights that may have affected the lands in the intermediate period between that and her own

---

(A) In the caſe referred to, when treating of the effects of diſſolution of marriage within the year without a living child, and where no ſpecial proviſions had been granted to, or accepted by, the widow; ſhe did not demand her *legal* proviſions of *terce* or *jus relictæ*, but merely inſiſted, that as widow ſhe was intitled to be *alimented* out of the heritable eſtate of which her huſband died poſſeſſed: So that the deciſion in that caſe cannot ſo properly be ſaid to be an alteration in the law, as an equitable interpoſition of the court of ſeſſion, in their capacity as a court of equity, in order to grant a ſubſiſtence to the widow of a man whoſe eſtate was fully ſufficient, and who, it could not reaſonably be preſumed, would have inclined that his widow ſhould be left deſtitute, when his eſtate went perhaps to a diſtant ſeries of heirs.

own ſervice. The relict, if ſhe was reputed to be lawful wife to the deceaſed, muſt be ſerved, notwithſtanding any objections by the heir againſt the marriage, which may be afterwards tried by the commiſſary.

Courteſy.

28. *Courteſy* is a liferent given by law, to the ſurviving huſband, of all his wife's heritage in which ſhe died infeſt, if there was a child of the marriage born alive. A marriage, though of the longeſt continuance, gives no right to the courteſy, if there was no iſſue of it. The child born of the marriage muſt be the mother's heir: If ſhe had a child of the former marriage, who is to ſucceed to her eſtate, the huſband has no right to the courteſy while ſuch child is alive: ſo that the courteſy is due to the huſband, rather as father to an heir, than as huſband to an heireſs. Heritage is here oppoſed to conqueſt; and ſo is to be underſtood only of the heritable rights to which the wife ſucceeded as heir to her anceſtors, excluding what ſhe herſelf had acquired by ſingular titles.

29. Becauſe the huſband enjoys the liferent of his wife's whole heritage, on a lucrative title, he is conſidered as her temporary repreſentative; and ſo is liable in payment of all the yearly burdens chargeable on the ſubject, and of the current intereſt of all her debts, real and perſonal, to the value of the yearly rent he enjoys by the courteſy. The courteſy needs no ſolemnity to its conſtitution: That right which the huſband had to the rents of his wife's eſtate during the marriage, *jure mariti*, is continued with him after her death, under the name of *courteſy*, by an act of the law itſelf. As in the terce, the huſband's ſeiſin is the ground and meaſure of the wife's right; ſo in the courteſy, the wife's ſeiſin is the foundation of the huſband's; and the two rights are, in all other reſpects, of the ſame nature; if it is not that the courteſy extends to burgage holdings, and to ſuperiorities.

30. All liferenters muſt uſe their right *ſalva rei ſubſtantia*: whatever therefore is part of the fee itſelf, cannot be incroached on by the liferenter, *e. g.* woods or growing timber, even for the neceſſary uſes of the liferented tenement. But, where a coppice or *ſilva cædua* has been divided into hags, one of which was in uſe to be cut annually by the proprietor, the liferenter may continue the former yearly cuttings; becauſe theſe are conſidered as the annual fruits the ſubject was intended to yield, and ſo the proper ſubject of a liferent.

31. Liferenters are bound to keep the ſubject liferented in proper repair. They are alſo burdened with the alimony of the heir, where he has not enough for maintaining himſelf. The bare right of apparency founds the action againſt the liferenter. It is a burden perſonal to the liferenter himſelf, and cannot be thrown upon his adjudging creditors as coming in his place by their diligences. Liferenters are alſo ſubjected to the payment of the yearly ceſſes, ſtipends, &c. falling due during their right, and to all other burdens that attend the ſubject liferented.

32. Liferent is extinguiſhed by the liferenter's death. That part of the rents which the liferenter had a proper right to, before his death, falls to his executors; the reſt, as never having been *in bonis* of the deceaſed, goes to the fiar. Martinmas and Whitſunday are, by cuſtom, the legal terms of the payment of rent: conſequently, if a liferenter of lands ſurvives the term of Whitſunday, his executors are intitled to the half of that year's rent, becauſe it was due the term before his death; and if he ſurvives the term of Martinmas, they have right to the whole. If the liferenter, being in the natural poſſeſſion, and having firſt ſowed the ground, ſhould die, even before Whitſunday, his executors are intitled to the whole crop, in reſpect that both ſeed and induſtry were his. In a liferent of money conſtituted by a moveable bond, the executors have a right to the intereſt, down to the very day of the liferenter's death, where no terms are mentioned for the payment thereof; but in the caſe of an heritable bond, or of a money liferent ſecured on land, the intereſts of liferenter and fiar (or of heir and executor, for the ſame rules ſerve to fix the intereſts of both) are both governed by the legal terms of land-rent, without regard to the conventional.

Sect. X. *Of Teinds.* clxxi.

Teinds.

TEINDS, or tithes, are that liquid proportion of rents or goods, which is due to churchmen, for performing divine ſervice, or exerciſing the other ſpiritual functions proper to their ſeveral offices. Moſt of the canoniſts affirm, that the preciſe proportion of a tenth, not only of the fruits of the ground, but of what is acquired by perſonal induſtry, is due to the Chriſtian clergy, of divine right, which they therefore call the *proper patrimony of the church*; though it is certain that titles, in their infancy, were given, not to the clergy alone, but to lay-monks who were called *pauperes*, and to other indigent perſons. Charles the Great was the firſt ſecular prince who acknowledged this right in the church. It appears to have been received in Scotland as far back as David I.

2. The perſon employed by a cathedral church or monaſtery to ſerve the cure in any church annexed was called a *vicar*, becauſe he held the church, not in his own right, but in the right or *vice* of his employers; and ſo was removeable at pleaſure, and had no ſhare of the benefice, other than what they thought fit to allow him: but, in the courſe of time, the appellation of *vicar* was limited to thoſe who were made perpetual, and who got a ſtated ſhare of the benefice for their incumbency; from whence aroſe the diſtinction of benefices into parſonages and vicarages.

3. Parſonage teinds are the teinds of corn; and they are ſo called becauſe they are due to the parſon or other titular of the benefice. Vicarage teinds are the ſmall teinds of calves, lint, hemp, eggs, &c, which were commonly given by the titular to the vicar who ſerved the cure in his place. The firſt ſort was univerſally due, unleſs in the caſe of their infeudation to laics, or of a pontifical exemption; but, by the cuſtoms of almoſt all Chriſtendom, the leſſer teinds were not demanded where they had not been in uſe to be paid. By the practice of Scotland, the teinds of animals, or of things produced from animals, as lambs, wool, calves, are due though not accuſtomed to be paid; but roots, herbs, &c. are not tithable, unleſs uſe of payment be proved: neither are perſonal teinds (*i. e.* the tenth of what one acquires by his own induſtry) acknowledged by the law: yet they have been found due, when ſupported by 40 years poſſeſſion.

4. The parſon who was intitled to the teind of corns, made his right effectual, either by accepting of a cer-

tain number of teind-bolls yearly from the proprietor in ſatisfaction of it; or, more frequently, by drawing or ſeparating upon the field his own tenth part of the corns, after they were reaped, from the ſtock or the remaining nine-tenths of the crop, and carrying it off to his own granaries; which is called *drawn teind*.

Annexation of church-lands to the crown.

5. After the reformation, James VI. conſidered himſelf as proprietor of all the church-lands; partly becauſe the purpoſes for which they had been granted were declared ſuperſtitious: and partly, in conſequence of the reſignations which he, and queen Mary his mother, had procured from the beneficiaries: and even as to the teinds, though the reformed clergy alſo claimed them as the patrimony of the church, the ſovereign did not ſubmit to that doctrine farther than extended to a competent proviſion for miniſters. He therefore erected or ſeculariſed ſeveral abbacies and priories into temporal lordſhips; the grantees of which were called ſometimes *lords of erection*, and ſometimes *titulars*, as having by their grants the ſame title to the erected benefices that monaſteries had formerly.

6. As the crown's revenue ſuffered greatly by theſe erections, the temporality of all church benefices (*i. e.* church lands) was, by 1587. *c.* 29, annexed to the crown. That ſtatute excepts from the annexation ſuch benefices as were eſtabliſhed before the reformation in laymen, whoſe rights the legiſlature had no intention to weaken. Notwithſtanding this ſtatute, his majeſty continued to make farther erections, which were declared null by 1592, *c.* 119 with an exception of ſuch as had been made in favour of lords of parliament ſince the general act of annexation in 1587.

7. King Charles I. ſoon after his ſucceſſion, raiſed a reduction of all theſe erections, whether granted before or after the act of annexation, upon the grounds mentioned at length by Mr Forbes in his treatiſe of tithes, p. 259. At laſt the whole matter was referred to the king himſelf by four ſeveral ſubmiſſions or compromiſes; in which the parties on one ſide were the titulars and their tackſmen, the biſhops with the inferior clergy, and the royal boroughs, for the intereſt they had in the teinds that were gifted for the proviſion of miniſters, ſchools, or hoſpitals, within their boroughs; and, on the other part, the proprietors who wanted to have the leading of their own teinds. The ſubmiſſion by the titulars contained a ſurrender into his majeſty's hands of the ſuperiorities of their ſeveral erections.

Valuation of teinds.

8. Upon each of theſe ſubmiſſions his majeſty pronounced ſeparate decrees arbitral, dated Sept. 2. 1629, which are ſubjoined to the acts of parliament of his reign. He made it lawful to proprietors to ſue the titulars for a valuation, and if they thought fit for a ſale alſo, of their teinds, before the commiſſioners named or to be named for that purpoſe. The rate of teind, when it was poſſeſſed by the proprietor jointly with the ſtock, for payment of a certain duty to the titular, and ſo did not admit a ſeparate valuation, was fixed at a fifth part of the conſtant yearly rent, which was accounted a reaſonable *ſurrogatum*, in place of a tenth of the increaſe. Where it was drawn by the titular, and conſequently might be valued ſeparately from the ſtock, it was to be valued as its extent ſhould be aſcertained upon a proof before the commiſſioners; but in this laſt valuation, the king directed the fifth part to be deducted from the proved teind, in favour of the proprietor, which was therefore called the *king's eaſe*. The proprietor ſuing for a valuation gets the leading of his own teinds as ſoon as his ſuit commences, providing he does not allow proteſtation to be extracted againſt him for not inſiſting.

9. Where the proprietor inſiſted alſo for a ſale of his teinds, the titular was obliged to ſell them at nine years purchaſe of the valued teind-duty. If the purſuer had a tack of his own teinds not yet expired; or if the defender was only tackſman of the teinds, and ſo could not give the purſuer an heritable right; an abatement of the price was to be granted accordingly by the commiſſioners.

10. There is no proviſion in the decrees-arbitral, for ſelling the teinds granted for the ſuſtentation of miniſters, univerſities, ſchools, or hoſpitals, becauſe theſe were to continue, as a perpetual fund, for the maintenance of the perſons or ſocieties to whom they were appropriated; and they are expreſsly declared not ſubject to ſale, by 1690, *c.* 30.—1693, *c.* 23. By the laſt of theſe acts, it is alſo provided, that the teinds belonging to biſhops, which had then fallen to the crown upon the aboliſhing of epiſcopacy, ſhould not be ſubject to ſale as long as they remained with the crown not diſpoſed of; nor thoſe which the proprietor, who had right both to ſtock and teind, reſerved to himſelf in a ſale or feu of the lands. But, though none of theſe tiends can be ſold, they may be valued.

King's right to the ſuperiorities of erection.

11. The king, by the decrees arbitral, declared his own right to the ſuperiorities of erection which had been reſigned to him by the ſubmiſſion, reſerving to the titulars the feu-duties thereof, until payment by himſelf to them of 1000 merks Scots for every chaldern of feu-victual, and for each 100 merks of feu duty; which right of redeeming the feu-duties was afterwards renounced by the crown. If the church-vaſſal ſhould conſent to hold his lands of the titular, he cannot thereafter recur to the crown as his immediate ſuperior.

Rules for fixing the rent in the valuation of teinds.

12. In explaining what the conſtant rent is by which the teind muſt be valued the following rules are obſerved. The rent drawn by the proprietor from the ſale of ſubjects that are more properly parts of the land than of the fruits, *e. g.* quarries, minerals, moſſes, &c. is to be deducted from the rental of the lands; and alſo the rent of ſupernumerary houſes, over and above what is neceſſary for agriculture; and the additional rent that may be paid by the tenant, in conſideration of the proprietor's undertaking any burden that law impoſes on the tenant, *e. g.* upholding the tenant's houſes, becauſe none of theſe articles are paid properly on account of the fruits. Orchards muſt alſo be deducted, and mill-rent, becauſe the profits of a mill ariſe from induſtry; and the corns manufactured there ſuffer a valuation as rent payable by the tenant, and therefore ought not to be valued a ſecond time againſt the titular as mill-rent. The yearly expence of culture ought not to be deducted; for no rent can be produced without it: but, if an improvement of rent is made at an uncommon expence, *e. g.* by draining a lake, the proprietor is allowed a reaſonable abatement on that account.

Teind's, redeemable, &c.

13. Notwithſtanding the ſeveral ways of miſapplying parochial teinds in the times of Popery, ſome few benefices remained entire in the hands of the parſons.

the miniſters planted in theſe, after the reformation, continued to have the full right to them, as proper beneficiaries: but a power was afterwards granted to the patron, to redeem the whole teind from ſuch beneficiaries, upon their getting a competent ſtipend modified to them; which teind ſo redeemed, the patron is obliged to ſell to the proprietor, at ſix years purchaſe.

14. Some teinds are more directly ſubject to an allocation for a miniſter's ſtipend than others. The teinds in the hands of the lay titular fall firſt to be allocated, who, ſince he is not capable to ſerve the cure in his own perſon, ought to provide one who can, and if the titular, in place of drawing the teind, has ſet it in tack, the tack-duty is allocated: this ſort is called *free teind*. Where the tack-duty, which is the titular's intereſt in the teinds, falls ſhort, the tack itſelf is burdened, or, in other words, the ſurplus teind over and above the tack-duty: but, in this caſe, the commiſſioners are empowered to recompenſe the tackſman, by prorogating his tack for ſuch a number of years as they ſhall judge equitable. Where this likewiſe proves deficient, the allocation falls on the teinds heritably conveyed by the titular, unleſs he has warranted his grant againſt future augmentations: in which caſe, the teinds of the lands belonging in property to the titular himſelf muſt be allocated in the firſt place.

15. Where there is ſufficiency of free teinds in a pariſh, the titular may allocate any of them he ſhall think fit for the miniſter's ſtipend, ſince they are all his own; unleſs there has been a previous decree of locality: and this holds, though the ſtipend ſhould have been paid immemorially out of the teinds of certain particular lands. This right was frequently abuſed by titulars, who, as ſoon as a proprietor had brought an action of ſale of his teinds, allocated the purſuer's full teind for the ſtipend, whereby ſuch action became ineffectual: it was therefore provided, that after citation in a ſale of teinds, it ſhall not be in the titular's power to allocate the purſuer's teinds ſolely, but only in proportion with the other teinds in the pariſh.

Miniſters glebes, &c. exempted from teinds.

16. Miniſters glebes are declared free from the payment of teind. Lands *cum decimis incluſis* are alſo exempted from teind. But in order to exempt lands from payment of teind, it is neceſſary that the proprietor prove his right thereto, *cum decimis incluſis*, as far back as the above act of annexation 1587.

17. Teinds are *debita fructuum*, not *fundi*. The action therefore for bygone teinds is only perſonal, againſt thoſe who have intermeddled, unleſs where the titular is infeft in the lands, in ſecurity of the valued teind-duty. Where a tenant is, by his tack, bound to pay a joint duty to the landlord for ſtock and teind, without diſtinguiſhing the rent of each, his defence of a *bona fide* payment of the whole to the landlord has been ſuſtained in a ſuit at the inſtance of a laic titular, but repelled where a churchman was purſuer. In both caſes the proprietor who receives ſuch rent is liable as intermeddler.

Inhibition of teinds.

18. In tacks of teinds, as of lands, there is place for tacit relocation: to ſtop the effect of which, the titular muſt obtain and execute an inhibition of teinds againſt the tackſman; which differs much from inhibition of lands (explained under the next ſection), and is intended merely to interpel or inhibit the tackſman from farther intermeddling. This diligence of inhibition may alſo be uſed at the ſuit of the titular, againſt any other poſſeſſor of the teinds; and if the tackſman or poſſeſſor ſhall intermeddle after the inhibition is executed, he is liable in a ſpuilzie.

19. Lands and teinds paſs by different titles; a diſpoſition of lands, therefore, though granted by one who has alſo right to the teind, will not carry the teind, unleſs it ſhall appear from ſpecial circumſtances that a ſale of both was deſigned by the parties. In lands *cum decimis incluſis*, where the teinds are conſolidated with the ſtock, the right of both muſt neceſſarily go together in all caſes.

Sect. XI. *Of inhibitions.*

clxxi.

The conſtitutions and tranſmiſſion of feudal rights, and the burdens with which they are chargeable, being now explained, it remains to be conſidered how theſe rights may be affected at the ſuit of creditors by legal diligence. Diligences are certain forms of law whereby a creditor endeavours to make good his payment, either by affecting the perſon of his debtor, or by ſecuring the ſubjects belonging to him from alienation, or by carrying the property of theſe ſubjects to himſelf. They are either real or perſonal. Real diligence is that which is proper to heritable or real rights; perſonal, is that by which the perſon of the debtor may be ſecured, or his perſonal eſtate affected. Of the firſt ſort we have two, *viz. inhibition* and *adjudication*.

Diligences.

Inhibition.

2. *Inhibition* is a perſonal prohibition, which paſſes by letters under the ſignet, prohibiting the party inhibited to contract any debt, or do any deed, by which any part of his lands may be allienated or carried off in prejudice of the creditor inhibiting. It muſt be executed againſt the debtor, perſonally, or at his dwelling-houſe, as ſummonſes, and thereafter publiſhed and regiſtered in the ſame manner with interdictions, (ſee N° clxxxiii. 21.)

3. Inhibition may proceed, either upon a liquid obligation, or even on an action commenced by a creditor for making good a claim not yet ſuſtained by the judge; which laſt is called *inhibition upon a depending action*. The ſummons, which conſtitutes the dependence, muſt be executed againſt the debtor before the letters of inhibition paſs the ſignet; for no ſuit can be ſaid to depend againſt one till he be cited in it as a defender: but the effect of ſuch inhibition is ſuſpended till decree be obtained in the action againſt the debtor; and in the ſame manner, inhibitions on conditional debts have no effect till the condition be purified. Inhibitions are not granted, without a trial of the cauſe, when they proceed on conditional debts. And though, in other caſes, inhibitions now paſs of courſe, the lords are in uſe to ſtay, or recal them, either on the debtor's ſhowing cauſe why the diligence ſhould not proceed, or even *ex officio* where the ground of the diligence is doubtful.

Limited to heritage.

4. Though inhibitions, by their uniform ſtyle, diſable the debtor from ſelling his moveable as well as his heritable eſtate, their effect has been long limited to heritage, from the interuption that ſuch an embargo upon moveables muſt have given to commerce;

ſo that debts contracted after inhibition may be the foundation of diligence againſt the debtor's perſon and moveable eſtate. An inhibition ſecures the inhibitor againſt the alienation, not only of lands that belonged to his debtor when he was inhibited, but of thoſe that he ſhall afterwards acquire: but no inhibition can extend to ſuch after-purchaſes as lie in a juriſdiction where the inhibition was not regiſtered; for it could not have extended to theſe though they had been made prior to the inhibition.

5. This diligence only ſtrikes againſt the voluntary debts or deeds of the inhibited perſon: it does not reſtrain him from granting neceſſary deeds, *i. e.* ſuch as he was obliged to grant anterior to the inhibition, ſince he might have been compelled to grant theſe before the inhibitor had acquired any right by his diligence. By this rule, a wadſetter or annualrenter might, after being inhibited, have effectually renounced his right to the reverſer on payment, becauſe law could have compelled him to it: but to ſecure inhibitors againſt the effect of ſuch alienations, it is declared by act of ſederunt of the court of ſeſſion, Feb. 19. 1680, that, after intimation of the inhibition to the reverſer, no renunciation or grant of redemption ſhall be ſuſtained, except upon declarator of redemption brought by him, to which the inhibitor muſt be made a party.

Is ſimply prohibitory. 6. An inhibition is a diligence ſimply prohibitory, ſo that the debt, on which it proceeds, continues perſonal after the diligence: and conſequently, the inhibitor, in a queſtion with anterior creditors whoſe debts are not ſtruck at by the inhibition, is only preferable from the period at which his debt is made real by adjudication: and where debts are contracted on heritable ſecurity, though poſterior to the inhibition, the inhibitor's debt, being perſonal, cannot be ranked with them; he only draws back from the creditors ranked the ſums contained in his diligence. The heir of the perſon inhibited is not reſtrained from alienation by the diligence uſed againſt his anceſtor; for the prohibition is perſonal, affecting only the debtor againſt whom the diligence is uſed.

7. Inhibitions do not, of themſelves, make void the poſterior debts or deeds of the perſon inhibited; they only afford a title to the uſer of the diligence to ſet them aſide, if he finds them hurtful to him: and even where a debt is actually reduced *ex capite inhibitionis*, ſuch reduction, being founded ſolely in the inhibitor's intereſt, is profitable to him alone, and cannot alter the natural preference of the other creditors.

Purging of inhibitions. 8. Inhibitions may be reduced upon legal nullities, ariſing either from the ground of debt or the form of diligence. When payment is made by the debtor to the inhibitor, the inhibition is ſaid to be *purged*. Any creditor, whoſe debt is ſtruck at by the inhibition, may, upon making payment to the inhibitor, compel him to aſſign the debt and diligence in his favour, that he may make goood his payment the more effectually againſt the common debtor.

clxxii. SECT. XII. *Of compriſings, adjudications, and judicial Sales.*

Appriſing. HERITABLE rights may be carried from the debtor to the creditor, either by the diligence of appriſing (now adjudication), or by a judicial ſale carried on before the court of ſeſſion. Appriſing, or compriſing, was the ſentence of a ſheriff, or of a meſſenger who was ſpecially conſtituted ſheriff for that purpoſe, by which the heritable rights belonging to the debtor were ſold for payment of the debt due to the appriſer; ſo that appriſings were, by their original conſtitution, proper ſales of the debtor's lands to any purchaſer who offered. If no purchaſer could be found, the ſheriff was to appriſe or tax the value of the lands by an inqueſt (whence came the name of *appriſing*), and to make over to the creditor lands to the value of the debt. A full hiſtory of appriſings will be found in the beginning of Mr Erſkine's large *Inſtitute* under this title; it being conſidered as unneceſſary to enter into a deduction now no longer neceſſary, as by the act 1672 adjudications were ſubſtituted in their place.

2. That creditors may have acceſs to affect the eſtate of their deceaſed debtor, though the heir ſhould ſtand off from entering, it is made lawful (by 1540, *c.* 106.) for any creditor to charge the heir of his debtor to enter to his anceſtor (year and day being paſt after the anceſtor's death), within 40 days after the charge; and if the heir fails, the creditor may proceed to appriſe his debtor's lands, as if the heir had been entered. Cuſtom has ſo explained this ſtatute, that the creditor may charge the heir, immediately after the death of his anceſtor, provided that the ſummons which is to be founded on the charge be not raiſed till after the expiry both of the year and of the 40 days neat enſuing the year, within which the heir is charged to enter. But this ſtatute relates only to ſuch charges on which appriſing is to be led againſt the anceſtor's lands; for, in thoſe which are to be barely the foundation of a common ſummons or proceſs againſt the heir, action will be ſuſtained if the year be elapſed from the anceſtor's death before the execution of the ſummons, though the 40 days ſhould not be alſo expired. Though the ſtatute authoriſes ſuch charges againſt majors only, practice has alſo extended it againſt minors, and the rule is extended to the caſe where the heir is the debtor. One muſt, in this matter, diſtinguiſh between a general and a ſpecial charge. A general charge ſerves only to fix the repreſentation of the heir who is charged, ſo as to make the debt his which was formerly his anceſtor's: but a ſpecial charge makes up for the want of a ſervice (N° clxxx. 25.); and ſtates the heir, *fictione juris* in the right of the ſubjects to which he is charged to enter. Where, therefore, the heir is the debtor, a general charge for fixing the repreſentation againſt him is unneceſſary, ſince the only concern of the creditor is, that his debtor make up titles to the anceſtor's eſtate, which is done by a ſpecial charge: but where the deceaſed was the debtor, the creditor muſt firſt charge his heir to enter in general, that it may be known whether he is to repreſent the debtor: if he does not enter within forty days, the debt may be fixed againſt him by a decree of conſtitution; after which, the heritable rights belonging to the anceſtor will fall to be attached; in doing which, the diligence to be uſed is different, according to the ſtate of the titles in the anceſtors perſon: for if the anceſtor ſtood veſted by inſeftment, the heir muſt be charged to enter heir in ſpecial; but if the anceſtor had but a perſonal right to the ſubjects (i. e. not perfected by ſeiſin), which would have been carried to the heir by a general ſervice, then what is called a *general ſpecial charge* muſt be given to the heir. Theſe char-

ges, either ſpecial or general ſpecial, as the circumſtances of the caſe may require, are by the ſtatute 1540 made equivalent to the heir's actual entry; and therefore an adjudication led after the *induciæ* of the charges are elapſed, effectually carries to the creditor the ſubjects to which the heir was charged to enter.

Adjudications.

3. Appriſings in courſe of time underwent many changes in their form and effect, till at length, by act 1672, *c.* 19. adjudications were ſubſtituted in their place, and are carried on by way of action before the court of ſeſſion. By that ſtatute, ſuch part of the debtor's lands is to be adjudged as is equivalent to the principal ſum and intereſt of the debt, with the compoſition due to the ſuperior and expences of infeſtment, and a fifth part more in reſpect the creditor is obliged to take land for his money. The debtor muſt deliver to the creditor a valid right of the lands to be adjudged, or tranſumpts thereof, renounce the poſſeſſion in his favour, and ratify the decree of adjudication: and law conſiders the rent of the lands as preciſely commenſurated to the intereſt of the debt; ſo that the adjudger lies under no obligation to account for the ſurplus rents. In this, which is called a *ſpecial adjudication*, the legal, or time within which the debtor may redeem, is declared to be five years; and the creditor attaining poſſeſſion upon it can uſe no farther execution againſt the debtor, unleſs the lands be evicted from him.

4. Where the debtor does not produce a ſufficient right to the lands, or is not willing to renounce the poſſeſſion, and ratify the decree (which is the caſe that has moſt frequently happened), the ſtatute makes it lawful for the creditor to adjudge all right belonging to the debtor in the ſame manner, and under the ſame reverſion of ten years, as he could, by the former laws, have appriſed it. In this laſt kind, which is called a *general adjudication*, the creditor muſt limit his claim to the principal ſum, intereſt, and penalty, without demanding a fifth part more. But no general adjudication can be inſiſted on, without libelling in the ſummons the other alternative of a ſpecial adjudication; for ſpecial adjudications are introduced by the ſtatute in the place of appriſings; and it is only where the debtor refuſes to comply with the terms thereof, that the creditor can lead a general adjudication.

5. Abbreviates are ordained to be made of all adjudications, which muſt be recorded within 60 days after the date of the decree. In every other reſpect, general adjudications have the ſame effects that appriſings had: adjudgers in poſſeſſion are accountable for the ſurplus rents; a citation in adjudications renders the ſubject litigious; ſuperiors are obliged to enter adjudgers; the legality of adjudications does not expire during the debtor's minority, &c. Only it may be obſerved, that though appriſings could not proceed before the term of payment, yet where the debtor is *vergens ad inopiam* the court *ex nobili officio* admit adjudication for the debt before it be payable. But this ſort being founded ſolely in equity, ſubſiſts merely as a ſecurity, and cannot carry the property to the creditor by the lapſe of any length of time.

Two kinds of adjudications.

6. There are two kinds of adjudication, which took place at the ſame time with appriſings, and ſtill obtain; *viz.* adjudications on a decree *cognitionis cauſa*, otherwiſe called *contra hereditatem jacentem*; and adjudications *in implement*. Where the debtor's apparent heir, who is charged to enter, formally renounces the ſucceſſion, the creditor may obtain a decree *cognitionis cauſa*; in which, though the heir renouncing is cited for the ſake of form, no ſentence condemnatory can be pronounced againſt him, in reſpect of his renunciation; the only effect of it is to ſubject the *hereditas jacens* to the creditor's diligence.

7. Adjudications *contra hereditatem jacentem*, carry not only the lands themſelves that belonged to the deceaſed, but the rents thereof fallen due ſince his death; for theſe, as an acceſſory to the eſtate belonging to the deceaſed, would have deſcended to the heir if he had entered, which rule is applied to all adjudications led on a ſpecial charge. This ſort of adjudication is declared redeemable within ſeven years, by any co-adjudging creditor, either of the deceaſed debtor or of the heir renouncing. The heir himſelf, who renounces, cannot be reſtored againſt his renunciation, nor conſequently redeem, if he be not a minor. But even a major may redeem indirectly, by granting a ſimulate bond to a confident perſon; the adjudication upon which, when conveyed to himſelf, is a good title to redeem all other adjudications againſt the lands belonging to his anceſtor.

8. Adjudications *in implement* are deduced againſt thoſe who have granted deeds without procuratory of reſignation or precept of ſeiſin, and refuſe to diveſt themſelves; to the end that the ſubject conveyed may be effectually veſted in the grantee. Theſe adjudications may be alſo directed againſt the heir of the granter, upon a charge to enter. Here there is no place for a legal reverſion; for, as the adjudication is led for completing the right of a ſpecial ſubject, it muſt carry that ſubject as irredeemably as if the right had been voluntarily completed.

9. All adjudications led within year and day of that one which has been made firſt effectual by ſeiſin (where ſeiſin is neceſſary), or exact diligence for obtaining ſeiſin, are preferable *pari paſſu*. The year and day runs from the date of the adjudication, and not of the ſeiſin or diligence, for obtaining it. After the days of that period, they are preferable according to their dates. All the co-adjudgers within the year are preferable *pari paſſu*, as if one adjudication had been led for all their debts. This makes the ſeiſin or diligence on the firſt adjudication a common right to the reſt, who muſt therefore refund to the owner of that diligence his whole expence laid out in carrying on and completing it. And though that firſt adjudication ſhould be redeemed, the diligence upon it ſtill ſubſiſts as to the reſt. This *pari paſſu* preference, however, does not deſtroy the legal preference of adjudications led on *debita fundi* (ſee N° clxix. 16.); nor does it take place in adjudications in implement.

A new ſort of adjudication has been lately introduced into the law of Scotland by the act of the 23d Geo. III. for rendering the payment of the creditors of inſolvent debtors more equal and expeditious. Among the many other proviſos in that ſtatute for expediting the payment of creditors, and leſſening the expence of diligence againſt the debtor's eſtate, it is enacted, That upon an order from the court of ſeſſion or lord ordinary, the bankrupt ſhall be bound to execute a diſpoſition or diſpoſitions, making over to the truſtee or truſtees choſen by the creditors the whole eſtate real and perſonal, wherever ſituated; and in caſe of the bankrupt's refuſal, or of the order not being complied with from any other reaſon, the court or the lord ordinary ſhall, upon the application of the truſtee, iſſue an act or decree, adjudging the property of the whole ſequeſtrated eſtate to be in the truſtee for behoof of the creditors; which ſhall have the ſame effect as if the bankrupt had executed the conveyance: and by a ſubſequent clauſe in the ſtatute, it is enacted, that this diſpoſition of the heritable eſtate, together with the order of the court or lord ordinary on which it proceeds, or, failing thereof, the decree of adjudication of the court or the lord ordinary, ſhall within 60 days of the date thereof be regiſtered in the regiſter of abbreviates of adjudications; and ſhall have the effect to intitle the truſtee for behoof of the whole creditors to rank in the ſame manner upon the heritable eſtate as if it had been a proper decree of adjudication, obtained at the date of the interlocutor awarding the ſequeſtration; accumulating the whole debts, principal and intereſt, as at that period, and adjudging for ſecurity or payment thereof, ſo as to rank *pari paſſu* with any prior effectual adjudication, and within year and day of the ſame. By this act alſo, in order to leſſen the number of adjudications, and conſequently the expence upon a bankrupt eſtate, it is declared, that intimation ſhall be made of the firſt adjudication which is called, ſo as all creditors who are in readineſs may, within ſuch a reaſonable time as may be allowed, not exceeding twenty ſederunt days, produce their grounds of debt, and be conjoined in the decree to follow on ſaid firſt adjudication. At the ſame time it may be proper to mention, that this act is only temporary; and after eight years experience, will probably ſuffer very conſiderable alterations, when it ſhall become neceſſary to digeſt another bankrupt law for Scotland.

Sequeſtration.

10. Before treating of judicial ſales of bankrupts eſtates, the nature of *ſequeſtration* may be ſhortly explained, which is a diligence that generally uſhers in actions of ſale. Sequeſtration of lands is a judicial act of the court of ſeſſion, whereby the management of an eſtate is put into the hands of a factor or ſteward named by the court, who gives ſecurity, and is to be accountable for the rents to all having intereſt. This diligence is competent, either where the right of the lands is doubtful, if it be applied for before either of the competitors has attained poſſeſſion, or where the eſtate is heavily charged with debts: but, as it is an unfavourable diligence, it is not admitted, unleſs that meaſure ſhall appear neceſſary for the ſecurity of creditors. Subjects not brought before the court by the diligence of creditors, cannot fall under ſequeſtration; for it is the competition of creditors which alone founds the juriſdiction of the court to take the diſputed ſubject into their poſſeſſion.

11. The court of ſeſſion who decrees the ſequeſtration has the nomination of the factor, in which they are directed by the recommendation of the creditors. A factor appointed by the ſeſſion, though the proprietor had not been infeft in the lands, has a power to remove tenants. Judicial factors muſt, within ſix months after extracting their factory, make up a rental of the eſtate, and a liſt of the arrears due by tenants, to be put into the hands of the clerk of the proceſs, as a charge againſt themſelves, and a note of ſuch alterations in the rental as may afterwards happen; and muſt alſo deliver to the clerk annually a ſcheme of their accounts, charge and diſcharge, under heavy penalties. They are, by the nature of their office, bound to the ſame degree of diligence that a prudent man adhibits in his own affairs; they are accountable for the intereſt of the rents, which they either have, or by diligence might have recovered, from a year after their falling due. As it is much in the power of thoſe factors to take advantage of the neceſſities of creditors, by purchaſing their debts at an undervalue, all ſuch purchaſes made either by the factor himſelf, or to his behoof, are declared equivalent to an acquittance or extinction of the debt. No factor can warrantably pay to any creditor, without an order of the court of ſeſſion; for he is, by the tenor of his commiſſion, directed to pay the rents to thoſe who ſhall be found to have the beſt right to them. Judicial factors are intitled to a ſalary, which is generally ſtated at five *per cent.* of their intromiſſions: but it is ſeldom aſcertained till their office expires, or till their accounting; that the court may modify a greater or ſmaller ſalary, or none, in proportion to the factor's integrity and diligence. Many caſes occur, where the court of ſeſſion, without ſequeſtration, name a factor to preſerve the rents from periſhing; *e. g.* where an heir is deliberating whether to enter, where a minor is without tutors, where a ſucceſſion opens to a perſon reſiding abroad; in all which caſes the factor is ſubjected to the rules laid down in act of ſederunt, Feb. 13. 1730.

As to ſequeſtrations under the bankrupt act before recited, the reader muſt neceſſarily be referred to the act itſelf; for being only temporary, as before mentioned, it ſeems quite inconſiſtent with the plan of this work to enter into a minute detail of the different regulations thereby laid down in caſes of ſequeſtration under it.

Sale of bankrupt eſtates.

12. The word *bankrupt* is ſometimes applied to perſons whoſe funds are not ſufficient for their debts; and ſometimes, not to the debtor, but to his eſtate. The court of ſeſſion are empowered, at the ſuit of any real creditor, to try the value of a bankrupt's eſtate, and ſell it for the payment of his debts.

Ranking of creditors.

13. No proceſs of ſale, at the ſuit of a creditor, can proceed without a proof of the debtor's bankruptcy, or at leaſt that his lands are ſo charged with debts that no prudent perſons will buy from him; and therefore the ſummons of ſale muſt comprehend the debtor's whole eſtate. The debtor, or his apparent heir, and all the real creditors in poſſeſſion, muſt be made parties to the ſuit; but it is ſufficient if the other creditors be called by an edictal citation. The ſummons of ſale contains a concluſion of ranking or preference of the bankrupt's creditors. In this ranking, firſt and ſecond terms are aſſigned to the whole creditors for exhibiting in court (or producing) their rights and diligences; and the decree of certification proceeding thereupon, againſt the writings not produced, has the ſame effect in favour of the creditors who have produced their rights, as if that decree had proceeded upon an action of reduction-improbation. See N° clxxxiii. 3. By the late bankrupt act, the ſale may precede the ranking of the creditors, unleſs the court uqon application of the creditors or any of them ſhall find ſufficient cauſe to delay the ſale. The irredeemable property of the lands is adjudged by the court to the higheſt of-

ferer at the ſale. The creditors receiving payment muſt grant to the purchaſer abſolute warrandice, to the extent of the ſum received by them; and the lands purchaſed are declared diſburdened of all debts or deeds of the bankrupt, or his anceſtors, either on payment of the price by the purchaſer to the creditors according to their preference, or on conſignation of it. By the act 1695, purchaſers were bound to conſign the price in the hands of the magiſtrates of Edinburgh; but by § 5. of the above act, they may conſign it in the royal bank or bank of Scotland. The only remedy provided to ſuch creditors as judge themſelves hurt by the ſale or diviſion of the price, even though they ſhould be minors, is an action for recovering their ſhare of the price againſt the creditors who have received it.

14. The expence of theſe proceſſes is deburſed by the factor out of the rents in his hands; by which the whole burden of ſuch expence falls upon the poſterior creditors.

15. Apparent heirs are intitled to bring actions of ſale of the eſtates belonging to their anceſtors, whether bankrupt or not; the expence of which ought to fall upon the purſuer, if there is any excreſcence of the price, after payment of the creditors; but if there be no excreſcence, the creditors, who alone are gainers by the ſale, ought to bear the charge of it.

16. As proceſſes of ranking and ſale are deſigned for the common intereſt of all the creditors, no diligence carried on or completed during their pendency ought to give any preference in the competition; *pendente lite, nihil innovandum.*

17. It is a rule in all real diligences, that where a creditor is preferable on ſeveral different ſubjects, he cannot uſe his preference arbitrarily, by favouring one creditor more than another; but muſt allocate his univerſal or catholic debt proportionally againſt all the ſubjects or parties whom it affects. If it is material to ſuch creditor to draw his whole payment out of any one fund, he may apply his debt ſo as may beſt ſecure himſelf: but that inequality will be rectified as to the poſterior creditors, who had likewiſe, by their rights and diligences, affected the ſubjects out of which he drew his payment, by obliging him to aſſign in their favour his right upon the ſeparate ſubjects which he did not uſe in the ranking; by which they may recur againſt theſe ſeparate ſubjects for the ſhares which the debt preferred might have drawn out of them. As the obligation to aſſign is founded merely in equity, the catholic creditor cannot be compelled to it, if his aſſigning ſhall weaken the preference of any ſeparate debt veſted in himſelf, affecting the ſpecial ſubject ſought to be aſſigned. But if a creditor upon a ſpecial ſubject ſhall acquire from another a catholic right, or a catholic creditor ſhall purchaſe a debt affecting a ſpecial ſubject, with a view of creating to the ſpecial debt a higher degree of preference than was naturally due to it, by an arbitrary application of the catholic debt, equity cannot protect him from aſſigning in favour of the creditor excluded by ſuch application, eſpecially if, prior to the purchaſe, the ſubject has become litigious by the proceſs of ranking.

II. MOVEABLE RIGHTS.

The law of heritable rights being explained, *Moveable* Rights fall next to be conſidered; the doctrine of which depends chiefly on the nature of Obligations.

Sect. XIII. *Of obligations and contracts in general.* clxxiii.

Obligations.

An obligation is a legal tie, by which one is bound to pay or perform ſomething to another. Every obligation on the perſon obliged implies an oppoſite right in the creditor, ſo that what is a burden in regard to the one is right with reſpect to the other; and all rights founded on obligation are called *perſonal.* There is this eſſential difference between a real and a perſonal right, that a *jus in re*, whether of property, or of an inferior kind, as ſervitude, intitles the perſon veſted with it to poſſeſs the ſubject as his own; or if he is not in poſſeſſion, to demand it from the poſſeſſors: whereas the creditor in a perſonal right has only *jus ad rem*, or a right to compel the debtor to fulfil his obligation; without any right in the ſubject itſelf, which the debtor is bound to transfer to him. One cannot oblige himſelf, but by a preſent act of the will. A bare reſolution, therefore, or purpoſe, to be obliged, is alterable at pleaſure.

Diviſion of obligations.

2. Obligations are either, (1.) Merely natural, where one perſon is bound to another by the law of nature, but cannot be compelled by any civil action to the performance. Thus, though deeds granted by a minor having curators, without their conſent, are null, yet the minor is naturally obliged to perform ſuch deeds; and parents are naturally obliged to provide their children in reaſonable patrimonies. Natural obligations intitle the creditor to retain what he has got in virtue thereof, without being ſubjected to reſtore it. (2.) Obligations are merely civil, which may be ſued upon by an action, but are elided by an exception in equity; this is the caſe of obligations granted through force or fear, &c. (3.) Proper or full obligations, are thoſe which are ſupported both by equity and the civil ſanction.

3. Obligations may be alſo divided into, (1.) Pure, to which neither day nor condition is adjected. Theſe may be exacted immediately. (2.) Obligations *(ex die)*, which have a day adjected to their performance. In theſe, *dies ſtatim cedit, ſed non venit;* a proper debt ariſes from the date of the obligations, becauſe it is certain that the day will exiſt; but the execution is ſuſpended till the lapſe of that day. (3.) Conditional obligations; in which there is no proper debt *(dies non cedit)* till the condition be purified, becauſe it is poſſible the condition may never exiſt; and which therefore are ſaid to create only the hope of a debt; but the granter, even of theſe, has no right to reſile An obligation, to which a day is adjected that poſſibly may never exiſt, implies a condition; *dies incertus pro conditione habetur.* Thus, in the caſe of a proviſion to a child, payable when he attains to the age of fourteen, if the child dies before that age, the proviſion falls.

4. Obligations, when conſidered with regard to their cauſe, were divided by the Romans, into thoſe ariſing from contract, quaſi contract, delict, and quaſi delict: but there are certain obligations, even full and proper ones, which cannot be derived from any of theſe ſources, and to which Lord Stair gives the name of *obediential.* Such as the obligation on parents to aliment or maintain their children; which ariſes ſingly from the relation

tion of parent and child, and may be enforced by the civil magiſtrate. Under parents are comprehended, the mother, grandfather, and grandmother, in their proper order. This obligation on parents extends to the providing of their iſſue in all the neceſſaries of life, and giving them ſuitable education. It ceaſes, when the children can earn a livelihood by their own induſtry; but the obligation on parents to maintain their indigent children, and reciprocally on children to maintain their indigent parents, is perpetual. This obligation is, on the father's death, transferred to the eldeſt ſon, the heir of the family; who, as repreſenting the father, muſt aliment his younger brothers and ſiſters: the brothers are only intitled to alimony, till their age of twenty-one, after which they are preſumed able to do for themſelves; but the obligation to maintain the ſiſters continues till their marriage. In perſons of lower rank, the obligation to aliment the ſiſters ceaſes after they are capable of ſubſiſting by any ſervice or employment.

5. All obligations, ariſing from the natural duty of reſtitution, fall under this claſs; thus, things given upon the view of a certain event, muſt be reſtored, if that event does not afterwards exiſt; thus alſo, things given *ob turpem cauſam*, where the turpitude is in the receiver and not in the giver, muſt be reſtored. And on the ſame principle, one upon whoſe ground a houſe is built or repaired by another, is obliged, without any covenant, to reſtore the expence laid out upon it, in ſo far as it has been profitable to him.

Contracts.

6. A contract is the voluntary agreement of two or more perſons, whereby ſomething is to be given or performed upon one part, for a valuable conſideration, either preſent or future, on the other part. Conſent, which is implied in agreement, is excluded, (1.) By error in the eſſentials of the contract; for, in ſuch caſe, the party does not properly contract, but errs or is deceived; and this may be alſo applied to contracts which take their riſe from fraud or impoſition. (2.) Conſent is excluded by ſuch a degree of reſtraint upon any of the contracting parties, as extorts the agreement; for where violence or threatening are uſed againſt a perſon, his will has really no part in the contract.

Loan.

7. Loan, or *mutuum*, is that contract which obliges a perſon, who has borrowed any fungible ſubject from another, to reſtore to him as much of the ſame kind, and of equal goodneſs. Whatever receives its eſtimation in number, weight, or meaſure, is a fungible; as corn, wine, current coin, &c. The only proper ſubjects of this contract are things which cannot be uſed without either their extinction or alienation: hence the property of the thing lent is neceſſarily transferred by delivery to the borrower, who conſequently muſt run all the hazards either of its deterioration or its periſhing, according to the rule, *res perit ſuo domino*. Where the borrower neglects to reſtore at the time and place agreed on, the eſtimation of the thing lent muſt be made according to its price at that time and in that place; becauſe it would have been worth ſo much to the lender, if the obligation had been duly performed. If there is no place nor time ſtipulated for, the value is to be ſtated according to the price that the commodity gave when and where it was demanded. In the loan of money, the value put on it by public authority, and not its intrinſic worth, is to be conſidered. This contract is one of thoſe called by the Romans *unilateral*, being obligatory only on one part; for the lender is ſubjected to no obligation: the only action therefore that it produces, is pointed againſt the borrower, that he may reſtore as much in quantity and quality as he borrowed, together with the damage the lender may have ſuffered through default of due performance.

Commodate.

8. Commodate is a ſpecies of loan, gratuitous on the part of the lender, where the thing lent may be uſed, without either its periſhing or its alienation. Hence in this ſort of loan, the property continues with the lender; the only right the borrower acquires in the ſubject is its uſe, after which he muſt reſtore the individual thing that he borrowed: conſequently, if the ſubject periſhes, it periſhes to the lender, unleſs it has periſhed by the borrower's fault. What degree of fault or negligence makes either of the contracting parties liable to the other in damages, is comprehended under the following rules. Where the contract gives a mutual benefit to both parties, each contractor is bound to adhibit a middle ſort of diligence; ſuch as a man of ordinary prudence uſes in his affairs. Where only one of the parties has benefit by the contract, that party muſt uſe exact diligence; and the other who has no advantage by it, is accountable only for dole, or for groſs omiſſions, which the law conſtrues to be dole. Where one employs leſs care on the ſubject of any contract which implies an exuberant truſt, than he is known to employ in his own affairs, it is conſidered as dole.

9. Hence it will appear that this is a *bilateral* contract; the borrower muſt be exactly careful of the thing lent, and reſtore it at the time fixed by the contract, or after that uſe is made of it for which it was lent: if he puts it to any other uſe, or neglects to reſtore it at the time covenanted, and if the thing periſhes thereafter, even by mere accident, he is bound to pay the value. On the other hand, the lender is obliged to reſtore to the borrower ſuch of the expences deburſed by him on that ſubject as aroſe from any uncommon accident, but not thoſe that naturally attend the uſe of it. Where a thing is lent gratuitouſly, without ſpecifying any time of redelivery, it conſtitutes the contract of *precarium*, which is revocable at the lender's pleaſure, and, being entered into from a perſonal regard to the borrower, ceaſeth by his death.

Depoſitation.

10. Depoſitation is alſo a *bilateral* contract, by which one who has the cuſtody of a thing committed to him (the depoſitary) is obliged to reſtore it to the depoſitor. If a reward is bargained for by the depoſitory for his care, it reſolves into the contract of location. As this contract is gratuitous, the depoſitory is only anſwerable for the conſequences of groſs neglect; but after the depoſit is redemanded, he is accountable even for caſual misfortunes. He is intitled to a full indemnification for the loſſes he has ſuſtained by the contract, and to the recovery of all ſums expended by him on the ſubject.

Nautæ, caupones, ſtabularii.

11. An obligation ariſes without formal paction, barely by a traveller's entering into an inn, ſhip, or ſtable, and there depoſiting his goods, or putting up his horſes; whereby the innkeeper, ſhipmaſter, or ſtabler, is accountable, not only for his own facts and thoſe of his ſervants (which is an obligation implied in the very exerciſe of theſe employments), but of the other gueſts or paſſengers; and, indeed, in every caſe, unleſs

where the goods have been loſt *damno fatali*, or carried off by pirates or houſe-breakers. Not only the maſters of ſhips, but their employers, are liable each of them for the ſhare that he has in the ſhip; but by the preſent cuſtom of trading nations, the goods brought into a ſhip muſt have been delivered to the maſter or mate, or entered into the ſhip-books. Carriers fall within the intendment of this law; and practice has extended it to vintners within borough. The extent of the damage ſuſtained by the party may be proved by his own oath *in litem*.

Sequeſtration.

12. Sequeſtration, whether voluntarily conſented to by the parties, or authoriſed by the judge, is a kind of depoſit; but as the office of ſequeſtree, to whoſe care the ſubject in diſpute is committed, is not conſidered as gratuitous, he cannot throw it up at pleaſure, as a common depoſitory may do; and he is liable in the middle degree of diligence. Conſignation of money is alſo a depoſit. It may be made, either where the debt is called in queſtion by the debtor, as in ſuſpenſions; or where the creditor refuſes to receive his money, as in wadſets, &c. The riſk of the conſigned money lies on the conſigner, where he ought to have made payment, and not conſignation; or has conſigned only a part; or has choſen for conſignatory, a perſon neither named by the parties nor of good credit. The charger, or other creditor, runs the riſk, if he has charged for ſums not due, or has without good reaſon refuſed payment, by which refuſal the conſignation became neceſſary. It is the office of a conſignatory, to keep the money in ſafe cuſtody till it be called for: if therefore he puts it out at intereſt, he muſt run the hazard of the debtor's inſolvency; but, for the ſame reaſon, though he ſhould draw intereſt for it, he is liable in none to the conſigner.

Conſignation.

Pledge.

13. Pledge, when oppoſed to wadſet, is a contract, by which a debtor puts into the hands of his creditor a ſpecial moveable ſubject in ſecurity of the debt, to be redelivered on payment. Where a ſecurity is eſtabliſhed by law to the creditor, upon a ſubject which continues in the debtor's poſſeſſion, it has the ſpecial name of an hypothec. Tradeſmen and ſhip-carpenters have an hypothec on the houſe or ſhip repaired, for the materials and other charges of reparation: but not for the expence of building a new ſhip. This, however, muſt not now be underſtood to apply univerſally; for the court of ſeſſion, in different caſes which lately occurred before them, and founding upon the law and practice of England in ſimilar caſes, have found, that no hypothec exiſts for the expence of repairs done in a *home* port. Owners of ſhips have an hypothec on the cargo for the freight; heritors on the fruits of the ground; and landlords on the *invecta et illata*, for their rents. Writers alſo, and agents, have a right of hypothec, or more properly of retention, in their conſtituent's writings, for their claim of pains and deburſements. A creditor cannot, for his own payment, ſell the ſubject impignorated, without applying to the judge-ordinary for a warrant to put it up to public ſale or roup; and to this application the debtor ought to be made a party.

Hypothec.

clxxiv.
Verbal agreement.

SECT. XIV. *Of obligations by word or writ.*

THE appellation of *verbal* may be applied to all obligations to the conſtitution of which writing is not eſſential, which includes both real and conſenſual contracts; but as theſe are explained under ſeparate titles, obligations *by word*, in the ſenſe of this rubric, muſt be reſtricted, either to promiſes, or to ſuch verbal agreements as have no ſpecial name to diſtinguiſh them. Agreement implies, the intervention of two different parties, who come under mutual obligations to one another. Where nothing is to be given or performed but on one part, it is properly called a *promiſe*; which, as it is gratuitous, does not require the acceptance of him to whom the promiſe is made. An offer, which muſt be diſtinguiſhed from a promiſe, implies ſomething to be done by the other party; and conſequently is not binding on the offerer, till it be accepted, with its limitations or conditions, by him to whom the offer is made; after which, it becomes a proper agreement.

Writing.

2. Writing muſt neceſſarily intervene in all obligations and bargains concerning heritable ſubjects, though they ſhould be only temporary: as tacks, which, when they are verbal, laſt but for one year. In theſe, no verbal agreement is binding, though it ſhould be referred to the oath of the party; for, till writing is adhibited, law gives both parties a right to reſile, as from an unfiniſhed bargain; which is called *locus pœnitentiæ*. If, upon a verbal bargain of lands, part of the price ſhall be paid by him who was to purchaſe, the *interventus rei*, the actual payment of money, creates a valid obligation, and gives a beginning to the contract of ſale: and, in general, where-ever matters are no longer entire, the right to reſile ſeems to be excluded. An agreement, whereby a real right is paſſed from, or reſtricted, called *pactum liberatorium*, may be preferred verbally; for freedom is favourable, and the purpoſe of ſuch agreement is rather to diſſolve than to create an obligation. Writing is alſo eſſential to bargains made under condition that they ſhall be reduced into writing; for in ſuch caſes, it is *pars contractus*, that, till writing be adhibited, both parties ſhall have liberty to withdraw. In the ſame manner, verbal or nuncupative teſtaments are rejected by the law; but verbal legacies are ſuſtained, where they do not exceed L. 100 Scots.

Solemnities of written obligations.

3. Anciently, when writing was little uſed, deeds were executed by the party, appending his ſeal to them in preſence of witneſſes. For preventing frauds that might happen by appending ſeals to falſe deeds, the ſubſcription alſo of the granter was afterwards required, and, if he could not write, that of a notary. As it might be of dangerous conſequences to give full force to the ſubſcription of the parties by initials, which is more eaſily counterfeited; the practice, in order to ſuſtain ſuch ſubſcription, ſeems to require a proof, not only that the granter uſed to ſubſcribe in that way, but that *de facto* he had ſubſcribed the deed in queſtion; at leaſt, ſuch proof is required, if the inſtrumentary witneſſes be ſtill alive.

4. As a further check, it was afterwards provided, that all writings carrying any heritable right, and other deeds of importance, be ſubſcribed by the principal parties, if they can ſubſcribe; otherwiſe, by two notaries, before four witneſſes ſpecially deſigned. The ſubſequent practice extended this requiſite of the deſignation of the witneſſes to the caſe where the parties themſelves ſubſcribed. Cuſtom has conſtrued obligations for

ſums exceeding L.100 Scots, to be obligations of importance. In a diviſible obligation, *ex. gr.* for a ſum of money, though exceeding L. 100, the ſubſcription of one notary is ſufficient, if the creditor reſtricts his claim to L. 100: But in an obligation indiviſible, *e. g.* for the performance of a fact, if it be not ſubſcribed in terms of the ſtatute, it is void. When notaries thus atteſt a deed, the atteſtation or docquet muſt ſpecially expreſs that the granter gave them a mandate to ſign; nor is it ſufficient that this be mentioned in the body of the writing.

5. In every deed, the name of him who writes it, with his dwelling-place, or other mark of diſtinction, muſt be inſerted. The witneſſes muſt both ſubſcribe as witneſſes, and their names and deſignations be inſerted in the body of the deed: And all ſubſcribing witneſſes muſt know the granter, and either ſee him ſubſcribe, or hear him acknowledge his ſubſcription; otherwiſe they are declared puniſhable as acceſſary to forgery. Deeds, decrees, and other ſecurities, conſiſting of more than one ſheet, may be written by way of book, in place of the former cuſtom of paſting together the ſeveral ſheets, and ſigning the joinings on the margin; provided each page be ſigned by the granter, and marked by its number, and the teſting clauſe expreſs the number of pages.

Solemnities of notarial inſtruments, &c.

6. Inſtruments of ſeiſin are valid, if ſubſcribed by one notary, before a reaſonable number of witneſſes; which is extended by practice to inſtruments of reſignation. Two witneſſes are deemed a reaſonable number to every deed that can be executed by one notary. It is not neceſſary that the witneſſes to a notorial inſtrument or execution ſee the notary or meſſenger ſign; for they are called as witneſſes to the tranſaction which is atteſted, and not to the ſubſcription of the perſon atteſting.

7. A new requiſite has been added to certain deeds ſince the union, for the benefit of the revenue: They muſt be executed on ſtamped paper, or parchment, paying a certain duty to the crown. Theſe duties muſt all be paid before wrote upon, under a penalty; but they are ſo numerous and complex, that it would be tedious, even if it fell under our plan, to enter into an enumeration of them. They will be found at length in Swinton's Abridgement, *voce Stamps*, to which the reader is referred. Certain judicial deeds, ſuch as bail-bonds, bonds of cautionry, in ſuſpenſions, &c. are excepted, and do not require ſtamps, as will be ſeen from the ſeveral acts referred to by the compiler of the above abridgement of the ſtatutes.

Blank bonds.

8. The granter's name and deſignation are eſſential, not properly as ſolemnities, but becauſe no writing can have effect without them. Bonds were, by our ancient practice, frequently executed without filling up the creditor's name; and they paſſed from hand to hand, like notes payable to the bearer: But as there was no method for the creditor of a perſon poſſeſſed of theſe to ſecure them from his payment, all writings taken blank in the creditor's name are declared null, as covers to fraud; with the exception of indorſations of bills of exchange.

Privileged deeds.

9. Certain privileged writings do not require the ordinary ſolemnities. 1. Holograph deeds (written by the granter himſelf) are effectual without witneſſes. The date of no holograph writing, except a bill of exchange (ſee next parag.), can be proved by the granter's own aſſertion, in prejudice either of his heir or his creditors, but muſt be ſupported by other adminicles. 2. Teſtaments, if executed where men of ſkill and buſineſs cannot be had, are valid though they ſhould not be quite formal: and let the ſubject of a teſtament be ever ſo valuable, one notary ſigning for the teſtator, before two witneſſes, is in practice ſufficient. Clergymen were frequently notaries before the reformation; and, though they were afterwards prohibited to act as notaries, the caſe of teſtaments is excepted; ſo that theſe are ſupported by the atteſtation of one miniſter, with two witneſſes. 3. Diſcharges to tenants are ſuſtained without witneſſes, from their preſumed ruſticity, or ignorance in buſineſs. 4. Miſſive letters *in re mercatoria*, commiſſions, and fitted accounts in the courſe of trade, and bills of exchange, though they are not holograph, are, from the favour of commerce, ſuſtained without the ordinary ſolemnities.

Bills of exchange.

10. A bill of exchange is an obligation in the form of a mandate, whereby the drawer or mandant deſires him to whom it is directed, to pay a certain ſum, at the day and place therein mentioned, to a third party. Bills of exchange are drawn by a perſon in one country to his correſpondent in another; and they have that name, becauſe it is the exchange, or the value of money in one place compared with its value in another, that generally determines the preciſe extent of the ſum contained in the draught. The creditor in the bill is ſometimes called the poſſeſſor, or *porteur*. As parties to bills are of different countries, queſtions concerning them ought to be determined by the received cuſtom of trading nations, unleſs where ſpecial ſtatute interpoſes. For this reaſon, bills of exchange, though their form admits not of witneſſes, yet prove their own dates, in queſtions either with the heir or creditors of the debtor; but this doctrine is not extended to inland bills payable to the drawer himſelf.

Their ſolemnities and obligations.

11. A bill is valid, without the deſignation either of the drawer or of the perſon to whom it is made payable: It is enough, that the drawer's ſubſcription appears to be truly his; and one's being poſſeſſor of a bill marks him out to be the creditor, if he bears the name given in the bill to the creditor: Nay, though the perſon drawn on ſhould not be deſigned, his acceptance preſumes that it was he whom the drawer had in his eye. Bills drawn blank, in the creditor's name fall under the ſtatutory nullity; for though indorſations of bills are excepted from it, bills themſelves are not. Not only the perſon drawn upon muſt ſign his acceptance, but the drawer muſt ſign his draught, before any obligation can be formed againſt the accepter: Yet it is ſufficient in practice, that the drawer ſigns before the bill be produced in judgment; though it ſhould be after the death both of the creditor and accepter. A creditor in a bill may tranſmit it to another by indorſation, though the bill ſhould not bear *to his order*; by the ſame rule that other rights are tranſmiſſible by aſſignation, though they do not bear *to aſſignees*.

Obligation.

12. The drawer, by ſigning his draught, becomes liable for the value to the creditor in the bill, in caſe the perſon drawn upon either does not accept, or after acceptance does not pay; for he is preſumed to have received value from the creditor at giving him the draught, though it ſhould not bear *for value received*: But, if

the drawer was debtor to the creditor in the bill before the draught, the bill is preſumed to be given towards payment of the debt, unleſs it expreſsly bears *for value*. The perſon drawn upon, if he refuſe to accept, while he has the drawer's money in his hands, is liable to him in damages. As a bill preſumes value from the creditor, indorſation preſumes value from the indorſee; who therefore, if he cannot obtain payment from the accepter, has recourſe againſt the indorſer, unleſs the bill be indorſed in theſe words, *without recourſe*.

13. Payment of a bill, by the accepter, acquits both the drawer and him at the hands of the creditor: but it intitles the accepter, if he was not the drawer's debtor, to an action of recourſe againſt him; and, if he was, to a ground of compenſation. Where the bill does not bear value in the hands of the perſon drawn upon, it is preſumed that he is not the drawer's debtor, and conſequently he has recourſe againſt the drawer, *ex mandato*.

14. Bills, when indorſed, are conſidered as ſo many bags of money delivered to the onerous indorſee; which therefore carry right to the contents, free of all burdens that do not appear on the bills themſelves. Hence, a receipt or diſcharge, by the original creditor, if granted on a ſeparate paper, does not exempt the accepter from ſecond payment to the indorſee; hence, alſo, no ground of compenſation competent to the accepter againſt the original creditor can be pleaded againſt the indorſee: but, if the debtor ſhall prove, by the oath of the indorſee, either that the bill is indorſed to him for the indorſer's own behoof, or that he paid not the full value for the indorſation, the indorſee is juſtly conſidered as but a name; and therefore all exceptions, receivable againſt the original creditor, will be ſuſtained againſt him. A proteſted bill, after regiſtration, cannot be tranſmitted by indorſation, but by aſſignation.

Negociation.

15. Bills muſt be negociated by the poſſeſſor, againſt the perſon drawn upon, within a preciſe time, in order to preſerve recourſe againſt the drawer. In bills payable ſo many days after ſight, the creditor has a diſcretionary power of fixing the payment ſomewhat ſooner or later, as his occaſions ſhall require. Bills payable on a day certain, need not be preſented for acceptance till the day of payment, becauſe that day can neither be prolonged nor ſhortened by the time of acceptance. For the ſame reaſon, the acceptance of bills, payable on a preciſe day, need not be dated; but, where a bill is drawn payable ſo many days after ſight, it muſt; becauſe there the term of payment depends on the date of acceptance.

Days of grace.

16. Though bills are, in ſtrict law, due the very day on which they are made payable, and may thefore be proteſted on the day thereafter; yet there are three days immediately following the day of payment, called *days of grace*, within any of which the creditor may proteſt the bill: but if he delay proteſting till the day after the laſt day of grace, he loſes his recourſe Where a bill is proteſted, either for not acceptance or not payment, the diſhonour muſt be notified to the drawer or indorſer, within three poſts at fartheſt. This ſtrictneſs of negociation is confined to ſuch bills as may be proteſted by the poſſeſſor upon a third day of grace: where, therefore, bills, are indorſed after the days of grace are expired, the indorſee is left more at liberty, and does not loſe his recourſe, tho' he ſhould not take a formal proteſt for not payment, if, within a reaſonable time, he ſhall give the indorſer notice of the accepter's refuſing to pay. Not only does the poſſeſſor, who neglects ſtrict negociation, loſe his recourſe againſt the drawer, where the perſon drawn upon becomes afterwards bankrupt; but tho' he ſhould continue ſolvent: for he may in that caſe recover payment from the debtor, and ſo is not to be indulged in an unneceſſary proceſs againſt the drawer, which he has tacitly renounced by his negligence. Recourſe is preſerved againſt the drawer, though the bill ſhould not be duly negociated, if the perſon drawn upon was not his debtor; for there the drawer can qualify no prejudice by the neglect of diligence, and he ought not to have drawn on one who owed him nothing.

Privileges of bills by ſtatute.

17. The privileges ſuperadded to bills by ſtatute are, that though, by their form, they can have no clauſe of regiſtration, yet, if duly proteſted, they are regiſtrable within ſix months after their date in caſe of not acceptance, or in ſix months after the term of payment in the caſe of not payment; which regiſtration is made the foundation of ſummary diligence, either againſt the drawer or indorſer in the caſe of not acceptance, or againſt the accepter in the caſe of not payment. This is extended to inland bills, *i. e.* bills both drawn and made payable in Scotland. After acceptance, ſummary diligence lies againſt no other than the accepter; the drawer and indorſer muſt be purſued by an ordinary action. It is only the principal ſum in the bill, and intereſt, that can be charged for ſummarily: the exchange, when it is not included in the draught, the re-exchange incurred by ſuffering the bill to be proteſted and returned, and the expence of diligence, muſt all be recovered by an ordinary action; becauſe theſe are not liquid debts, and ſo muſt be previouſly conſtituted.

Inland bills.

Certain bills not privileged.

18. Bills, when drawn payable at any conſiderable diſtance of time after date, are denied the privileges of bills; for bills are intended for currency, and not to lie as a ſecurity in the creditor's hands. Bills are not valid which appear *ex facie* to be donations. No extrinſic ſtipulation ought to be contained in a bill which deviates from the proper nature of bills: hence, a bill to which a penalty is adjected, or with a clauſe of intereſt from the date, is null. Inland precepts drawn, not for money the medium of trade, but for fungibles, are null, as wanting writer's name and witneſſes. It is not an agreed point whether promiſſory notes, without writer and witneſſes, unleſs holograph, are probative.

Late alterations as to bills and promiſſory notes.

19. So ſtood the law of Scotland, in regard to bills and promiſſory notes, previous to the ſtatute 12 Geo. III. By that ſtatute, however, the law of Scotland has undergone very material alterations. They are declared to have the ſame privileges; and to preſcribe in ſix years after the term of payment. Bank notes and poſt-bills are excepted from this preſcription; nor does it run during the years of the creditor's minority. Inland bills and promiſſory notes muſt be proteſted within the days of grace, to ſecure recourſe; and the diſhomary notified within 14 days after the proteſt. Sumnour diligence may paſs not only againſt the accepter, but likewiſe againſt the drawer, and all the indorſees jointly and ſeverally; and at the inſtance of any indorſee,

dorſee, though the bill was not proteſted in his name, upon his producing a receipt or letter from the proteſting indorſee. This act was in force only for ſeven years after 15th May 1772, and to the end of the then next ſeſſion of parliament. But as it was found by experience, that it had been of great advantage to Scotland, it was made perpetual by the late act 23 Geo. III. ſo that it has now become a permanent part of the law of Scotland.

Solemnities of deeds ſigned in a foreign country.

20. As for the ſolemnities eſſential to deeds ſigned in a foreign country, when they come to receive execution in Scotland, it is a general rule, that no laws can be of authority beyond the dominions of the lawgiver. Hence, in ſtrictneſs, no deed, though perfected according to the law of the place where it is ſigned, can have effect in another country where different ſolemnities are required to a deed of that ſort. But this rigour is ſo ſoftened *ex comitate*, by the common conſent of nations, that all perſonal obligations granted according to the law of that country where they are ſigned, are effectual every where; which obtains in obligations to convey heritage. Conveyances themſelves, however, of heritable ſubjects, muſt be perfected according to the law of the country where the heritage lies, and from which it cannot be removed.

Delivery and depoſitation of deeds.

21. A writing, while the granter keeps it under his own power or his doer's, has no force; it becomes obligatory, only after it is delivered to the grantee himſelf, or found in the hands of a third perſon. As to which laſt, the following rules are obſerved. A deed found in the hands of one who is doer both for the granter and grantee, is preſumed to have been put in his hands as doer for the grantee. The preſumption is alſo for delivery, if the deed appears in the hands of one who is a ſtranger to both. Where a deed is depoſited in the hands of a third perſon, the terms of depoſitation may be proved by the oath of the depoſitary, unleſs where they are reduced into writing. A deed appearing in the cuſtody of the grantee himſelf, is conſidered as his abſolute right; in ſo much that the granter is not allowed to prove that it was granted in truſt, otherwiſe than by a written declaration ſigned by the truſtee, or by his oath.

What deeds effectual without delivery.

22. The following deeds are effectual without delivery. (1.) Writings containing a clauſe diſpenſing with the delivery; theſe are of the nature of revocable deeds, where the death of the granter is equivalent to delivery, becauſe after death there can be no revocation. (2.) Deeds in favour of children, even natural ones; for parents are the proper cuſtodiars or keepers of their childrens writings. From a ſimilar reaſon, poſtnuptial ſettlements by the huſband to the wife need no delivery. (3.) Rights which are not to take effect till the granter's death, or even where he reſerves an intereſt to himſelf during his life; for it is preſumed he holds the cuſtody of theſe, merely to ſecure to himſelf ſuch reſerved intereſt. (4.) Deeds which the granter lay under an antecedent natural obligation to execute, *e. g.* rights granted to a cautioner for his relief. (5.) Mutual obligations, *e. g.* contracts; for every ſuch deed, the moment it is executed, is a common evident to all the parties contractors. Laſtly, the publication of a writing by regiſtration, is equivalent to delivery.

SECT. XV. *Of obligations and contracts ariſing from conſent, and of acceſſory obligations.*

clxxv. Conſenſual contracts.

CONTRACTS conſenſual, (*i. e.* which might, by the Roman law, be perfected by ſole conſent, without the intervention either of things or of writing,) are *ſale*, *permutation*, *location*, *ſociety*, and *mandate*. Where the ſubject of any of theſe contracts is heritable, writing is neceſſary.

Sale.

2. *Sale* is a contract, by which one becomes obliged to give ſomething to another, in conſideration of a certain price in current money to be paid for it. Things conſiſting merely in hope, may be the ſubject of this contract, as the draught of a net. Commodities, where their importation or uſe is abſolutely prohibited, cannot be the ſubject of ſale; and even in run goods, no action lies againſt the vender for not delivery, if the buyer knew the goods were run. So far indeed has this principle been carried, and ſo anxious have the judges been to put a ſtop to the practice of ſmuggling, that in different caſes which have occurred of action being brought at the inſtance of a foreign merchant againſt perſons reſident in Scotland for payment of goods which had been ſmuggled, a diſtinction has been made betwixt the caſe of the foreign merchant being or not being a native of Scotland. Where the foreign merchant was a native of Scotland, it has been preſumed that he was acquainted with the revenue law of the country, and that he was in a manner *verſans in re illicita*; and therefore action has been denied for recovery of the price of ſuch goods: but where, on the other hand, the foreign merchant was not a native of Scotland, no ways amendable to, and even preſumed ignorant of, its laws, he has with juſtice been allowed action for the price of ſuch goods, unleſs it were ſhown that he had in fact been *particeps criminis*, by aiding the ſmuggle. The ſame principle has regulated the deciſions in the courts of England in caſes of a ſimilar nature, which have within theſe few years come before them.

3. Though this contract may be perfected before delivery of the ſubject, the property remains till then with the vender: (See N° clxii. 9.). Yet till delivery, the hazard of its deterioration falls on the purchaſer becauſe he has all the profits ariſing from it after the ſale. On the other hand, the ſubject itſelf periſhes to the vender; (1.) If it ſhould periſh through his fault, or after his undue delay to deliver it. (2.) If a ſubject is ſold as a fungible, and not as an individual, or *corpus*, e. g. a quantity of farm-wheat, ſold without diſtinguiſhing the parcel to be delivered from the reſt of the farm. (3.) The *periculum* lies on the vender till delivery, if he be obliged by a ſpecial article in the contract to deliver the ſubject at a certain place.

Location.

4. *Location* is that contract where an hire is ſtipulated for the uſe of things, or for the ſervice of perſons. He who lets his work or the uſe of his property to hire, is the locator or leſſor; and the other, the conductor or leſſee. In the location of things, the leſſor is obliged to deliver the ſubject, fitted to the uſe it was let for; and the leſſee muſt preſerve it carefully, put it to no other uſe, and, after that is over, reſtore it. Where a workman or artificer lets his labour, and if the work is either not performed according to contract,

or if it be inſufficient, even from mere unſkilfulneſs, he is liable to his employer in damages, for he ought not, as an artificer, to have undertaken a work to which he was not equal. A ſervant hired for a certain term, is intitled to his full wages, though from ſickneſs or other accident he ſhould be diſabled for a part of his time; but if he die before the term, his wages are only due for the time he actually ſerved. If a maſter dies, or without good reaſon turns off, before the term, a ſervant who eats in his houſe, the ſervant is intitled to his full wages, and to his maintenance till that term: and, on the other part, a ſervant who without ground deſerts his ſervice, forfeits his wages and maintenance, and is liable to his maſter in damages.

Society,

5. *Society* or *copartnerſhip* is a contract, whereby the ſeveral partners agree concerning the communication of loſs and gain ariſing from the ſubject of the contract. It is formed by the reciprocal choice which the partners make one of another; and ſo is not conſtituted in the caſe of co-heirs, or of ſeveral legatees in the ſame ſubject. A copartnerſhip may be ſo conſtituted, that one of the partners ſhall, either from his ſole right of property in the ſubject, or from his ſuperior ſkill, be intitled to a certain ſhare of the profits, without being ſubjected to any part of the loſs; but a ſociety, where one partner is to bear a certain proportion of loſs, without being intitled to any ſhare of the profits, called by the Romans *ſocietas leonina*, is juſtly reprobated. All the partners are intitled to ſhares of profit and loſs proportioned to their ſeveral ſtocks, where it is not otherwiſe covenanted.

6. As partners are united, from a *delectus perſonæ*, in a kind of brotherhood, no partner can, without a ſpecial power contained in the contract, transfer any part of his ſhare to another. All the partners are bound *in ſolidum* by the obligation of any one of them, if he ſubſcribe by the *firm* or ſocial name of the company; unleſs it be a deed that falls not under the common courſe of adminiſtration. The company effects are the common property of the ſociety ſubjected to its debts; ſo that no partner can claim a diviſion thereof, even after the ſociety is diſſolved, till theſe are paid: and, conſequently, no creditor of a partner can, by diligence, carry to himſelf the property of any part of the common ſtock, in prejudice of a company creditor: but he may, by arreſtment, ſecure his debtor's ſhare in the company's hands, to be made forthcoming to him at the cloſe of the copartnerſhip, in ſo far as it is not exhauſted by the company debts.

7. Society being founded in the mutual confidence among the *ſocii*, is diſſolved, not only by the renunciation, but by the death of any one of them, if it be not otherwiſe ſpecially covenanted. A partner who renounces upon unfair views, or at a critical time, when his withdrawing may be fatal to the ſociety, looſes his partners from all their engagements to him, while he is bound to them for all the profits he ſhall make by his withdrawing, and for the loſs ariſing thereby to the company. Not only natural, but civil death, *e. g.* ariſing from a ſentence inflicting capital puniſhment, makes one incapable to perform the duties of a partner, and conſequently diſſolves the ſociety. In both caſes, of death and renunciation, the remaining partners may continue the copartnerſhip, either expreſsly, by entering into a new contract; or tacitly, by carrying on their trade as formerly. Public trading companies are now every day conſtituted, with rules very different from thoſe which either obtained in the Roman law or at this day obtain in private ſocieties. The proprietors or partners in theſe, though they may transfer their ſhares, cannot renounce; nor does their death diſſolve the company, but the ſhare of the deceaſed deſcends to his repreſentative.

A joint trade

8. A *joint trade* is not a copartnerſhip, but a momentary contract, where two or more perſons agree to contribute a ſum, to be employed in a particular courſe of trade, the produce whereof is to be divided among the adventurers, according to their ſeveral ſhares, after the voyage is finiſhed. If, in joint trade, that partner who is intruſted with the money for purchaſing the goods, ſhould, in place of paying them in caſh, buy them upon credit, the furniſher who followed his faith alone in the ſale, has no recourſe againſt the other adventurers; he can only recover from them what of the buyer's ſhare is yet in their hands. Where any one of the adventurers in a joint trade becomes bankrupt, the others are preferable to his creditors, upon the common ſtock, as long as it continues undivided, for their relief of all the engagements entered into by them on account of the adventure.

Mandate.

9. *Mandate* is a contract, by which one employs another to manage any buſineſs for him; and by the Roman law, it muſt have been gratuitous. It may be conſtituted tacitly, by one's ſuffering another to act in a certain branch of his affairs, for a tract of time together, without challenge. The mandator is at liberty not to accept of the mandate; and as his powers are ſolely founded in the mandants commiſſion, he muſt if he undertakes it, ſtrictly adhere to the directions given him: Nor is it a good defence, that the method he followed was more rational; for in that his employer was the proper judge. Where no ſpecial rules are preſcribed, the mandatory, if he acts prudently, is ſecure, whatever the ſucceſs may be; and he can ſue for the recovery of all the expences reaſonably deburſed by him in the execution of his office.

10. Mandates may be general, containing a power of adminiſtering the mandant's whole affairs; but no mandate implies a power of diſpoſing gratuitouſly of the conſtituent's property, nor even of ſelling his heritage for an adequate price but a general mandatory may ſell ſuch of the moveables as muſt otherwiſe periſh. No mandatory can, without ſpecial powers, tranſact doubtful claims belonging to his conſtituent, or refer them to arbiters.

11. Mandates expire, (1.) By the revocation of the employer, though only tacit, as if he ſhould name another mandatory for the ſame buſineſs. (2.) By the renunciation of the mundatory; even after he has executed part of his commiſſion, if his office be gratuitous. (3.) By the death, either of the mandant or mandatory: But if matters are not entire, the mandate continues in force, notwithſtanding ſuch revocation, renunciation, or death. Procuratories of reſignation, and precepts of ſeiſin, are made out in the form of mandates; but, becauſe they are granted for the ſole benefit of the mandatory, all of them, excepting precepts of *clare conſtat*, are declared (by act 1693) to continue after the death either of the granter or grantee. Deeds which cotain a clauſe or mandate for regiſtration, are for the

ſame reaſon made regiſtrable after the death of either (by act 1693 and 1696.)

12. The favour of commerce has introduced a tacit mandate, by which maſters of ſhips are impowered to contract in name of their exercitors or employers, for repairs, ſhip-proviſions, or whatever elſe may be neceſſary for the ſhip or crew; ſo as to oblige not themſelves only, but their employers. Whoever has the actual charge of the ſhip is deemed the maſter, though he ſhould have no commiſſion from the exercitors, or ſhould be ſubſtituted by the maſter in the direction of the ſhip without their knowledge. Exercitors are liable, whether the maſter has paid his own money to a merchant for neceſſaries, or has borrowed money to purchaſe them. The furniſher or lender muſt prove that the ſhip needed repairs, proviſions, &c. to ſuch an extent; but he is under no neceſſity to prove the application of the money or materials to the ſhip's uſe. If there are ſeveral exercitors, they are liable *ſinguli in ſolidum*. In the ſame manner the undertaker of any branch of trade, manufacture, or other land negociation, is bound by the contracts of the inſtitors whom he ſets over it, in ſo far as relates to the ſubject of the *præpoſitura*.

Homologation.

13. Contracts and obligations, in themſelves imperfect, receive ſtrength by the contractor or his heir's doing any act thereafter which imports an approbation of them, and conſequently ſupplies the place of an original legal conſent. This is called *homologation;* and it takes place even in deeds intrinſically null, whether the nullity ariſes from the want of ſtatutory ſolemnities, or from the incapacity of the granter. It cannot be inferred, (1.). By the act of a perſon who was not in the knowledge of the original deed; for one cannot approve what he is ignorant of. (2.) Homologation has no place where the act or deed, which is pleaded as ſuch, can be aſcribed to any other cauſe; for an intention to come under an obligation is not preſumed.

Quaſi-contracts,

14. *Quaſi-contracts* are formed without explicit conſent, by one of the parties doing ſomething which by its nature either obliges him to the other party, or the other party to him. Under this claſs may be reckoned tutory, &c. the entry of an heir, *negotiorum geſtio*, *indebiti ſolutio*, communion of goods between two or more common proprietors, and *mercium jactus levandæ navis cauſa*. *Negotiorum geſtio* forms thoſe obligations which ariſe from the management of a perſon's affairs, in his abſence, by another, without a mandate. As ſuch manager acts without authority from the proprietor, he ought to be liable in exact diligence, unleſs he has from friendſhip interpoſed in affairs which admitted no delay; and he is accountable for his intromiſſions with intereſt. On the other part, he is intitled to the recovery of his neceſſary deburſements on the ſubject, and to be relieved of the obligations in which he may have bound himſelf in conſequence of the management.

13. *Indebiti ſolutio*, or the payment to one of what is not due to him, if made through any miſtake, either of fact, or even of law, founds him who made the payment in an action againſt the receiver for repayment *(condictio indebiti.)* This action does not lie, (1.) If the ſum paid was due *ex æquitate*, or by a natural obligation: for the obligation to reſtore is founded ſolely in equity. (2.) If he who made the payment knew that nothing was due; for *qui conſulto dat quod non debebat, præſumiter donare.*

Right of dividing common property.

16. Where two or more perſons become common proprietors of the ſame ſubject, either by legacy, gift, or purchaſe, without the view of copartnerſhip, an obligation is thereby created among the proprietors to communicate the profit and loſs ariſing from the ſubject, while it remains common: And the ſubject may be divided at the ſuit of any having intereſt. This diviſion, where the queſtion is among the common proprietors, is *according to the valuation of their reſpective properties:* But where the queſtion is between the proprietors and thoſe having ſervitudes upon the property, the ſuperfice is only divided, without prejudice to the property. Commonties belonging to the king, or to royal boroughs, are not diviſible. Lands lying runrig, and belonging to different proprietors, may be divided, with the exception of borough and incorporated acres; the execution of which is committed to the judge ordinary, or juſtices of the peace.

Lex Rhodia de jactu.

17. The throwing of goods overboard, for lightening a ſhip in a ſtorm, creates an obligation, whereby the owners of the ſhip and goods ſaved are obliged to contribute for the relief of thoſe whoſe goods were thrown overboard, that ſo all may bear a proportional loſs of the goods ejected for the common ſafety. In this contribution, the ſhip's proviſions ſuffer no eſtimation. A maſter who has cut his maſt, or parted with his anchor to ſave the ſhip, is intitled to this relief; but if he has loſt them by the ſtorm, the loſs falls only on the ſhip and freight. If the ejection does not ſave the ſhip, the goods preſerved from ſhipwreck are not liable in contribution. Ejection may be lawfully made, if the maſter and a third part of the mariners judge that meaſure neceſſary, though the owner of the goods ſhould oppoſe it: and the goods ejected are to be valued at the price that the goods of the ſame ſort which are ſaved ſhall be afterwards ſold for.

Acceſſory obligations

18. There are certain obligations which cannot ſubſiſt by themſelves, but are *acceſſions* to, or make a part of, other obligations. Of this ſort are *fidejuſſion*, and the *obligation to pay intereſt*. *Cautionry*, or *fidejuſſion*, is that obligation by which one becomes engaged as ſecurity for another, that he ſhall either pay a ſum, or perform a deed.

Cautionry.

19. A cautioner for a ſum of money may be bound, either ſimply as cautioner for the principal debtor, or conjunctly and ſeverally for and with the principal debtor. The firſt has, by our cuſtoms, the *beneficium ordinis*, or of diſcuſſion; by which the creditor is obliged to diſcuſs the proper debtor, before he can inſiſt for payment againſt the cautioner. When one is bound as full debtor with and for the principal, or conjunctly and ſeverally with him, the two obligants are bound equally in the ſame obligation, each *in ſolidum;* and conſequently, the cautioner, though he is but an acceſſory, may be ſued for the whole, without either diſcuſſing or even citing the principal debtor. Cautioners for performance of facts by another, or for the faithful diſcharge of an office (*e. g.* for factors, tutors, &c.), cannot by the nature of their engagement be bound conjunctly and ſeverally with the principal obligant, becauſe the fact to which the principal is bound cannot poſſibly be performed by another. In ſuch engagements, therefore, the failure muſt be previouſly

conſtituted againſt the proper debtor, before action can be brought againſt the cautioner for making up the loſs of the party ſuffering.

20. The cautioner, who binds himſelf at the deſire of the principal debtor, has an *actio mandati* or of relief againſt him, for recovering the principal and intereſt paid by himſelf to the creditor, and for neceſſary damages; which action lies *de jure*, though the creditor ſhould not aſſign to him on payment. As relief againſt the debtor is implied in fidejuſſory obligations, the cautioner, where ſuch relief is cut off, is no longer bound: hence, the defence of preſcription frees the cautioner, as well as the principal debtor.

21. But, (1.) Where the cautionry is interpoſed to an obligation merely natural, the relief is reſtricted to the ſums that have really turned to the debtor's profit. (2.) A cautioner who pays without citing the debtor, loſes his relief, in ſo far as the debtor had a relevant defence againſt the debt, in whole or in part. Relief is not competent to the cautioner, till he either pays the debt, or is diſtreſſed for it; except, 1ſt, Where the debtor is expreſsly bound to deliver to the cautioner his obligation cancelled, againſt a day certain, and has failed; or, 2dly, Where the debtor is *vergens ad inopiam*; in which caſe the cautioner may, by proper diligence, ſecure the debtor's funds for his own relief, even before payment or diſtreſs.

22. A right of relief is competent *de jure* to the cautioner who pays, againſt his co-cautioners, unleſs where the cautioner appears to have renounced it. In conſequence of this implied relief, a creditor, if he ſhall grant a diſcharge to any one of the cautioners, muſt, in demanding the debt from the others, deduct that part as to which he has cut off their relief by that diſcharge. Where the principal debtor, in a bond in which a cautioner is bound, grants bond of corroboration with a new cautioner, both cautioners, as they intervene for the ſame debt, and at the deſire of the ſame debtor, have a mutual relief againſt each other; but where the cautioner in the firſt bond ſigns as a principal obligant in the corroboration, the cautioner in the new bond, it would ſeem, would be intitled to a total relief againſt the firſt cautioner. At ſame time, the deciſions of the court of ſeſſion are not perfectly at one upon this branch of the doctrine of cautionry.

Judicial cautionry.

23. Cautionry is alſo *judicial*, as in a ſuſpenſion. It is ſufficient to looſe the cautioner, that when he became bound, the ſuſpender had good reaſon to ſuſpend, *e. g.* if the charger had at that period no title, or had not then performed his part, though theſe grounds of ſuſpenſion ſhould be afterwards taken off. In all maritime cauſes, where the parties are frequently foreigners, the defender muſt give caution *judicio ſiſti et judicatum ſolvi*: ſuch cautioner gets free by the death of the defender before ſentence; but he continues bound though the cauſe ſhould be carried from the admiral to the court of ſeſſion. This ſort of caution is only to be exacted in cauſes ſtrictly maritime.

24. It happens frequently, that a creditor takes two or more obligants bound to him, all as principal debtors, without fidejuſſion. Where they are ſo bound, for the performance of facts that are in themſelves indiviſible, they are liable each for the whole, or *ſinguli in ſolidum*. But, if the obligation be for a ſum of money, they are only liable *pro rata*; unleſs, (1.) Where they are in expreſs words bound conjunctly and ſeverally; or, (2.) In the caſe of bills or promiſſory notes. One of ſeveral obligants of this ſort, who pays the whole debt, or fulfils the obligation, is intitled to a proportional relief againſt the reſt; in ſuch manner, that the loſs muſt, in every caſe, fall equally upon all the ſolvent obligants.

Intereſt of money.

25. Obligations for ſums of money are frequently accompanied with an obligation for the annualrent or intereſt thereof. *Intereſt (uſuræ)* is the profit due by the debtor, of a ſum of money to the creditor for the uſe of it. The canon law conſidered the taking of intereſt as unlawful: the law of Moſes allowed it to be exacted from ſtrangers: and all the reformed nations of Europe have found it neceſſary, after the example of the Romans, to authoriſe it at certain rates fixed by ſtatute. Soon after the reformation, the legal intereſt was fixed at the rate of 10 *per cent. per annum*; from which time it has been gradually reduced, till at laſt, by 12 *Ann ſtat.* 2. *c.* 16. it was brought to five *per cent.* and has continued at that rate ever ſince.

26. Intereſt is due, either *by law* or *by paction*. It is due *by law*, either *from the force of ſtatute*, under which may be included acts of ſederunt, or *from the nature of the tranſaction*. Bills of exchange, and inland bills, though they ſhould not be proteſted, carry intereſt from their date in caſe of non acceptance; or from the day of their falling due, in caſe of acceptance and nonpayment. Where a bill is accepted, which bears no term of payment, or which is payable on demand, no intereſt is due till demand be made of the ſum, the legal voucher of which is a notorial proteſt. Intereſt is due by a debtor after deunciation, for all the ſums contained in the diligence, even for that part which is made up of intereſt. Sums paid by cautioners on diſtreſs carry intereſt, not only as to the principal ſum in the obligation, but as to the intereſt paid by the cautioner. Factors named by the court of ſeſſion are liable for intereſt, by a ſpecial act of ſederunt; ſee N° clxxii. 11.

27. It riſes *ex lege*, or from the nature of the tranſaction, that a purchaſer in a ſale is liable in intereſt for the price of the lands bought from the term of his entry, though the price ſhould be arreſted in his hands, or though the ſeller ſhould not be able to deliver to him a ſufficient progreſs or title to the lands; for no purchaſer can in equity enjoy the fruits of the lands, while at the ſame time he retains the intereſt of the price: but lawful conſignation of the price made by a purchaſer, upon the refuſal of perſon's having right to receive it, ſtops the currency of intereſt. Where one intermeddles with money belonging to another which carries intereſt, he ought to reſtore it *cum omni obventione et cauſa*; and is therefore liable in the intereſt of it, as being truly an acceſſory of the ſubject itſelf. It is alſo from the nature of the tranſaction, that intereſt is in certain caſes allowed to merchants or others in name of damages.

28. Intereſt is due *by expreſs paction*, where there is a clauſe in a bond or obligation, by which money is made to carry intereſt. An obligation is not lawful, where it is agreed on, that the yearly intereſt of the ſum lent, if it ſhould not be paid punctually as it

falls due, ſhall be accumulated into a principal ſum bearing intereſt; but an obligation may be lawfully granted, not only for the ſum truly lent, but for the intereſt to the day at which the obligation is made payable, whereby the intermediate intereſt is accumulated into a principal ſum from the term of payment. Intereſt may be alſo due by *implied paction;* Thus, where intereſt upon a debt is by a letter promiſed for time paſt, ſuch promiſe implies a paction for intereſt as long as the debt remains unpaid; thus alſo, the uſe of payment of intereſt preſumes a paction, and when intereſt is expreſſed for one term, it is preſumed to be bargained for till payment.

General properties of obligation.

29. The ſubject-matter of all obligations conſiſts either *of things*, or *of facts*. Things exempted from commerce cannot be the ſubject of obligation. (See N° clxii. 2.) One cannot be obliged to the performance of a fact naturally impoſſible: nor of a fact in itſelf immoral, for that is alſo in the judgment of law impoſſible. Since impoſſible obligations are null, no penalty or damage can be incurred for non performance: but it is otherwiſe, if the fact be in itſelf poſſible, though not in the debtor's power; in which caſe the rule obtains, *locum facti impræſtabilis ſubit damnum et intereſſe*.

30. An obligation, to which a condition is adjected, either naturally or morally impoſſible, is in the general caſe null; for the parties are preſumed not to have been ſerious. But ſuch obligation is valid, and the condition thereof held *pro non ſcripta*, (1.) In teſtaments; (2.) In obligations to the performance of which the granter lies under a natural tie, as in bonds of proviſion to a child. Where an obligation is granted under a condition, lawful but unfavourable, *e. g.* that the creditor ſhall not marry without the conſent of certain friends, no more weight is given to the condition than the judge thinks reaſonable. A condition, which is in ſome degree in the power of the creditor himſelf, is held as fulfilled, if he has done all he could to fulfil it. Implement or performance cannot be demanded in a mutual contract, by that party who himſelf declines or cannot fulfil the counterpart.

Donation,

31. *Donation*, ſo long as the ſubject is not delivered to the donee, may be juſtly ranked among obligations; and it is that obligation which ariſes from the mere good will and liberality of the granter. Donations imply no warrandice, but from the future facts of the donor. They are hardly revocable by law for ingratitude, though it ſhould be of the groſſeſt kind: thoſe betwixt man and wife are revocable by the donor, even after the death of the donee; but remuneratory grants, not being truly donations, cannot be ſo revoked. That ſpecial ſort of donation, which is conſtituted verbally, is called a *promiſe*. The Roman law intitled all donors to the *beneficium competentiæ*, in virtue of which they might retain ſuch part of the donation as was neceſſary for their own ſubſiſtence. The law allows this benefit to fathers, with reſpect to the proviſions granted to their children; and to grandfathers, which is a natural conſequence of childrens obligation to aliment their indigent parents; but to no collateral relation, not even to brothers.

32. Donations made in contemplation of death, or *mortis cauſa*, are of the nature of legacies, and like them revocable: conſequently, not being effectual in the granter's life, they cannot compete with any of his creditors; not even with thoſe whoſe debts were contracted after the donation. They are underſtood to be given from a perſonal regard to the donee, and therefore fall by his predeceaſe. No deed, after delivery, is to be preſumed a *donatio mortis cauſa;* for revocation is excluded by delivery.

33. Deeds are not preſumed, *in dubio*, to be donations. Hence, a deed by a debtor to his creditor, if donation be not expreſſed, is preſumed to be granted in ſecurity or ſatisfaction of the debt; but bonds of proviſion to children are, from the preſumption of paternal affection, conſtrued to be intended as an additional patrimony: yet a tocher, given to a daughter in her marriage-contract, is preſumed to be in ſatisfaction of all former bonds and debts; becauſe marriage contracts uſually contain the whole proviſions in favour of the bride. One who aliments a perſon that is come of age, without an expreſs paction for board, is preſumed to have entertained him as a friend, unleſs in the caſe of thoſe who earn their living by the entertainment or board of ſtrangers. But alimony given to minors, who cannot bargain for themſelves, is not accounted a donation; except either where it is preſumed, from the near relation of the perſon alimenting, that it was given *ex pietate;* or where the minor had a father or curators, with whom a bargain might have been made.

Sect. XVI. *Of the diſſolution or extinction of obligations.* clxxvi.

Extinction of obligations, as, performance.

Obligations may be diſſolved by *performance or implement*, *conſent*, *compenſation*, *novation*, and *confuſion*. (1.) By *ſpecifical performance:* thus, an obligation for a ſum of money is extinguiſhed by payment. The creditor is not obliged to accept of payment by parts, unleſs where the ſum is payable by different diviſions. If a debtor in two or more ſeparate bonds to the ſame creditor, made an indefinite payment, without aſcribing it at the time to any one of the obligations, the payment is applied, 1ſt, To intereſt, or to ſums not bearing intereſt. 2dly, To the ſums that are leaſt ſecured, if the debtor thereby incurs no rigorous penalty. But, 3dly, if this application be penal on the debtor, *e. g.* by ſuffering the legal of an adjudication to expire, the payment will be applied ſo as to ſave the debtor from that forfeiture. Where one of the debts is ſecured by a cautioner, the other not, the application is to be ſo made, *cæteris paribus*, that both creditor and cautioner may have equal juſtce done to them.

2. Payment made by the debtor upon a miſtake in fact, to one whom he believed, upon probable grounds, to have the right of receiving payment, extinguiſhes the obligation. But payment made to one, to whom the law denies the power of receiving it, has not this effect; as if a debtor, ſeized by letters of caption, ſhould make payment to the meſſenger; for *ignorantia juris neminem excuſat*. In all debts, the debtor, if he be not interpelled, may ſafely pay before the term, except in tack-duties or feu-duties; the payment whereof, before the terms at which they

are made payable, is conſtrued to be colluſive, in a queſtion with a creditor of the landlord or ſuperior. Payment is *in dubio* preſumed, by the voucher of the debt being in the hands of the debtor; *chirographum, apud debitorem repertum, præſumitur ſolutum.*

By conſent.

3. Obligations are extinguiſhable by the *conſent of the creditor*, who, without full implement, or even any implement, may renounce the right conſtituted in his own favour. Though a diſcharge or acquittance granted by one whom the debtor *bona fide* took for the creditor, but who was not, extinguiſhes the obligation, if the ſatisfaction made by the debtor was real; yet where it is imaginary, the diſcharge will not ſcreen him from paying to the true creditor the debt for which he had made no prior ſatisfaction. In all debts which are conſtituted by writing, the extinction, whether it be by ſpecifical performance or bare conſent, muſt be proved, either by the oath of the creditor, or by a diſcharge in writing; and the ſame ſolemnities which law requires in the obligation, are neceſſary in the diſcharge: but, where payment is made, not by the debtor himſelf, but by the creditor's intromiſſion with the rents of the debtor's eſtate, or by delivery to him of goods in name of the debtor, ſuch delivery or intromiſſion, being *facti*, may be proved by witneſſes, though the debt ſhould have been not only conſtituted by writing, but made real on the debtor's lands by adjudication.

4. A diſcharge, though it ſhould be general, of all that the granter can demand, extends not to debts of an uncommon kind, which are not preſumed to have been under the granter's eye. This doctrine applies alſo to general aſſignations. In annual payments, as of rents, feu-duties, intereſt, &c. three conſecutive diſcharges by the creditor, of the yearly or termly duties, preſume the payment of all precedings. Two diſcharges by the anceſtor, and the third by the heir, do not infer this preſumption, if the heir was ignorant of the anceſtor's diſcharges. And diſcharges by an adminiſtrator, as a factor, tutor, &c. preſume only the payment of all preceding duties incurred during his adminiſtration. This preſumption ariſes from repeating the diſcharges thrice ſucceſſively; and ſo does not hold in the caſe of two diſcharges, though they ſhould include the duties of three or more terms.

By compenſation.

5. Where the ſame perſon is both creditor and debtor to another, the mutual obligations, if they are for equal ſums, are extinguiſhed by *compenſation*; if for unequal, ſtill the leſſer obligation is extinguiſhed, and the greater diminiſhed, as far as the concourſe of debit and credit goes. To found compenſation, (1.) Each of the parties muſt be debtor and creditor at the ſame time. (2.) Each of them muſt be debtor and creditor in his own right. (3.) The mutual debts muſt be of the ſame quality: hence, a ſum of money cannot be compenſated with a quantity of corns; becauſe, till the prices are fixed, at which the corns are to be converted into money, the two debts are incommenſurable. Laſtly, compenſation cannot be admitted, where the mutual debts are not clearly aſcertained either by a written obligation, the ſentence of a judge, or the oath of the party. Where this requires but a ſhort diſcuſſion, ſentence for the purſuer is delayed for ſome time, *ex æquitate*, that the defender may make good his ground of compenſation. Where a debt for fungibles is aſcertained in money by the ſentence of a judge, the compenſation can have no effect farther back than the liquidation; becauſe, before ſentence, the debts were incommenſurable: but, where a debt for a ſum of money is, in the courſe of a ſuit, conſtituted by the oath of the debtor, the compenſation, after it is admitted by the judge, operates *retro*, in ſo far as concerns the currency of intereſt, to the time when, by the parties acknowledgment, the debt became due: for, in this caſe, the debtor's oath is not what creates the debt, or makes it liquid; it only declares that ſuch a liquid ſum was truly due before. Compenſation cannot be offered after decree, either by way of ſuſpenſion or reduction; unleſs it has been formerly pleaded, and unjuſtly repelled. Decrees in abſence are excepted.

By retention.

6. The right of *retention*, which bears a near reſemblance to compenſation, is chiefly competent, where the mutual debts, not being liquid, cannot be the ground of compenſation; and it is ſometimes admitted *ex æquitate*, in liquid debts, where compenſation is excluded by ſtatute: thus, though compenſation cannot be pleaded after decree, either againſt a creditor or his aſſignee; yet, if the original creditor ſhould become bankrupt, the debtor, even after decree, may retain againſt the aſſignee, till he gives ſecurity for ſatisfying the debtor's claim againſt the cedent. This right is frequently founded in the expence deburſed or work employed on the ſubject retained, and ſo ariſes from the mutual obligations incumbent on the parties. It has never been diſputed that retention of goods was competent, until payment or ſatisfaction of the debt incurred in relation to theſe goods; but it was found by the court of ſeſſion, in a caſe which was very lately before them, that goods could not be retained by a manufacturer until payment of a prior debt; the debt incurred upon the goods in his hand being offered; and although the debtor had become bankrupt, and the manufacturer muſt otherwiſe rank as a common creditor for his prior debt. But retention may be ſuſtained, though the debt due to him who claims it does not ariſe from the nature of the obligation by which he is debtor: thus, a factor on a land-eſtate may retain the ſums levied by him in conſequence of his factory, not only till he be paid of the diſburſements made on occaſion of ſuch eſtate, but alſo till he be diſcharged from the ſeparate engagements he may have entered into on his conſtituent's account.

By novation.

7. Obligations are diſſolved by *novation*, whereby one obligation is changed into another, without changing either the debtor or creditor. The firſt obligation being thereby extinguiſhed, the cautioners in it are looſed, and all its conſequences diſcharged; ſo that the debtor remains bound only by the laſt. As the creditor to whom a right is once conſtituted, ought not to loſe it by implication, novation is not eaſily preſumed, and the new obligation is conſtrued to be merely corroborative of the old; but, where the ſecond obligation expreſsly bears to be *in ſatisfaction* of the firſt, theſe words muſt neceſſarily be explained into novation. Where the creditor accepts of a new debtor, in place of the former who is diſcharged, this method of extinction is called *delegation*.

By delegation.

By confuſion.

8. Obligations are extinguiſhed *confuſione*, where the

debit and credit meet in the ſame perſon, either by ſucceſſion or ſingular title, *e. g.* when the debtor ſucceeds to the creditor, or the creditor to the debtor, or a ſtranger to both; for one cannot be debtor to himſelf. If the ſucceſſion, from which the *confuſio* ariſes, happens afterwards to be divided, ſo as the debtor and creditor come again to be different perſons; the *confuſio* does not produce an extinction, but only a temporary ſuſpenſion of the debt.

clxvii.

Sect. XVII. *Of Aſſignations.*

Aſſignations.

Heritable rights, when they are cloathed with infeftment, are tranſmittted by diſpoſition, which is a writing containing procuratory of reſignation and precept of ſeiſin; but thoſe which either acquire no ſeiſin, or on which ſeiſin has not actually followed, are tranſmiſſible by ſimple *aſſignation*. He who grants the aſſignation is called the *cedent;* and he who receives it the *aſſignee* or ceſſionary: if the aſſignee conveys his right to a third perſon, the deed of conveyance is called a *tranſlation;* and if he aſſigns it back to the cedent, a *retroceſſion*. Certain rights are, from the uſes to which they are deſtined, incapable of tranſmiſſion, as alimentary rights: others cannot be aſſigned by the perſon inveſted in them, without ſpecial powers given to him; as tacks, reverſions: the tranſmiſſion of a third ſort, is not preſumed to be intended, without an expreſs conveyance; as of paraphernal goods, which are ſo proper to the wife, that a general aſſignation, by her to her huſband, of all that did or ſhould belong to her at her deceaſe, does not comprehend them. A liferent-right is, by its nature, incapable of a proper traſmiſſion; but its profits may be aſſigned, while it ſubſiſts.

Intimation of aſſignations.

2. Aſſignations muſt not only be delivered to the aſſignee, but intimated by him to the debtor. Intimations are conſidered as ſo neceſſary for completing the conveyance, that in a competition between two aſſignations, the laſt, if firſt intimated, is preferred.

What notification is equivalent to intimation.

3. Though, regularly, intimation to the debtor is made by an inſtrument, taken in the hands of a notary, by the aſſignee or his procurator; yet the law admits equipollencies, where the notice of the aſſignment given to the debtor is equally ſtrong. Thus, a charge upon letters of horning at the aſſignee's inſtance, or a ſuit brought by him againſt the debtor, ſupplies the want of intimation; theſe being judicial acts, which expoſe the conveyance to the eyes both of the judge and of the debtor; or the debtor's promiſe of payment by writing to the aſſignee, becauſe that is in effect a corroborating of the original debt. The aſſignee's poſſeſſion of the right, by entering into payment of the rents or intereſt, is alſo equal to an intimation; for it imports, not only notice to the debtor, but his actual compliance: but the debtor's private knowledge of the aſſignment is not ſuſtained as intimation.

In what caſes not neceſſary.

4. Certain conveyances need no intimation. (1.) Indorſations of bills of exchange; for theſe are not to be fettered with forms, introduced by the laws of particular ſtates. (2.) Bank-notes are fully conveyed by the bare delivery of them; for as they are payable to the bearer, their property muſt paſs with their poſſeſſion. (3.) Adjudication, which is a judicial conveyance, and marriage, which is a legal one, carry the full right of the ſubjects thereby conveyed, without intimation: nevertheleſs, as there is nothing in theſe conveyances which can of themſelves put the debtor *in mala fide*, he is therefore *in tuto* to pay to the wife, or to the original creditor in the debt adjudged, till the marriage or adjudication be notified to him. Aſſignments of moveable ſubjects, though they be intimated, if they are made *retenta poſſeſſione*, (the cedent retaining the poſſeſſion), cannot hurt the cedents creditors; for ſuch rights are preſumed, in all queſtions with creditors, to be colluſive, and granted in truſt for the cedent himſelf.

Effects of aſſignation.

5. An aſſignment carries to the aſſignee the whole right of the ſubject conveyed, as it was in the cedent; and conſequently he may uſe diligence, either in his cedent's name while he is alive, or in his own.

6. After an aſſignation is intimated, the debtor cannot prove a payment, or compenſation, by the oath of the cedent, who has no longer any intereſt in the debt; unleſs the matter has been made litigious by an action commenced prior to the intimation: but the debtor may refer to the oath of the aſſignee, who is in the right of the debt, that the aſſignment was gratuitous, or in truſt for the cedent: either of which being proved, the oath of the cedent will affect the aſſignee. If the aſſignation be in part onerous, and in part gratuitous, the cedent's oath is good againſt the aſſignee, only in ſo far as his right is gratuitous. All defences competent againſt the original creditor in a moveable debt, which can be proved otherwiſe than by his oath, continue relevant againſt even an onerous aſſignee, whoſe right can be no better than that of his author, and muſt therefore remain affected with all the burdens which attended it in the author's perſon.

clxxviii.

Sect. XVIII. *Of arreſtments and poindings.*

Arreſtment.

The diligences, whereby a creditor may affect his debtor's moveable ſubjects, are *arreſtment* and *poinding*. By *arreſtment* is ſometimes meant the ſecuring of a criminal's perſon till trial: but as it is underſtood in the rubric of this title, it is the order of a judge, by which he who is debtor in a moveable obligation to the arreſter's debtor, is prohibited to make payment or delivery till the debt due to the arreſter be paid or ſecured. The arreſtors debtor is uſually called the common debtor: becauſe, where there are two or more competing creditors, he is debtor to all of them. The perſon in whoſe hands the diligence is uſed is ſtyled the arreſtee.

2. Arreſtment may be laid on by the authority either of the ſupreme court, or of an inferior judge. In the firſt caſe, it proceeds either upon ſpecial letters of arreſtment, or on a warrant contained in letters of horning; and it muſt be executed by a meſſenger. The warrants granted by inferior judges are called precepts of arreſtment, and they are executed by the officer proper to the court. Where the debtor to the common debtor is a pupil, arreſtment is properly uſed in the hands of the tutor, as the pupil's adminiſtrator: this doctrine may perhaps extend to other general adminiſtrators, as commiſſioner, &c. But arreſtment, uſed in the hands of a factor or ſteward, cannot found an action of forthcoming without calling the conſtituent. Where the debtor to a common debtor is a corporation, arreſtment muſt be uſed in the hands of the directors or

treaſurer, who repreſent the whole body. Arreſtment, when it is uſed in the hands of the debtor himſelf, is inept; for that diligence is intended only as a reſtraint upon third parties.

3. All debts, in which one is perſonally bound, though they ſhould be heritably ſecured, are grounds upon which the creditor may arreſt the moveable eſtate belonging to his debtor. Arreſtment may proceed on a debt, the term of payment whereof is not yet come, in caſe the debtor be *vergens ad inopiam*. If a debt be not yet conſtituted by decree or regiſtration, the creditor may raiſe and execute a ſummons againſt his debtor for payment, on which pending action arreſtment may be uſed, in the ſame manner as inhibition, which is called *arreſtment upon a dependence*. If one's ground of credit be for the performance of a fact, or if his depending proceſs be merely declaratory, without a concluſion of payment or delivery, ſuch claims are not admitted to be ſufficient grounds for arreſtment.

What debts arreſtible.

4. Moveable debts are the proper ſubject of arreſtment; under which are comprehended conditional debts, and even depending claims. For leſſening the expence of diligence to creditors, all bonds which have not been made properly heritable by ſeiſin are declared arreſtable: but this does not extend to adjudications, wadſets, or other perſonal rights of lands, which are not properly debts. Certain moveable debts are not arreſtible. (1.) Debts due by bill, which paſs from hand to hand as bags of money. (2.) Future debts; for though inhibition extends to *adquirenda* as well as *adquiſita*, yet arreſtment is limited, by its warrant, to the debt due at the time of ſerving it againſt the arreſtee. Hence, an arreſtment of rents or intereſt carries only thoſe that have already fallen due or at leaſt become current. Claims, depending on the iſſue of a ſuit, are not conſidered as future debts; for the ſentence, when pronounced, has a retroſpect to the period at which the claim was firſt founded. The like doctrine holds in conditional debts. (3.) Alimentary debts are not arreſtable; for theſe are granted on perſonal conſiderations, and ſo are not communicable to creditors: but the paſt intereſt upon ſuch debt may be arreſted by the perſon who has furniſhed the alimony. One cannot ſecure his own effects to himſelf for his maintenance, ſo as they ſhall not be affectable by his creditors. Salaries annexed to offices granted by the king, and particularly thoſe granted to the judges of the Seſſion, and the fees of ſervants, are conſidered as alimentary funds; but the ſurplus fee, over and above what is neceſſary for the ſervant's perſonal uſes, may be arreſted. It has alſo been found, that a wadſet ſum conſigned after an order of redemption uſed, but before decreet of declarator, is not arreſtable.

Effect of breach of arreſtment.

5. If, in contempt of the arreſtment. the arreſtee ſhall make payment of the ſum, or deliver the goods arreſted, to the common debtor, he is not only liable criminally for breach of arreſtment, but he muſt pay the debt again to the arreſter. As the law formerly ſtood, an arreſtment uſed at the market croſs of Edinburgh, pier and ſhore of Leith, againſt a perſon furth of the kingdom, was good; ſo that if the arreſtee made payment to his creditor after the date of the arreſtment, he was found liable in ſecond payment to the arreſter, becauſe he had done all in his power to notify his diligence. This, however, is very properly altered by § 3. of the act, of the 23d Geo. III. which declares, that an arreſtment uſed at the market croſs of Edinburgh, pier and ſhore of Leith, in the hands of any perſon out of the kingdom, without other ſufficient notification, ſhall not interpell the arreſtee from paying *bona fide* to the original creditor. Arreſtment is not merely prohibitory, as inhibitions are; but is a ſtep of diligence which founds the uſer in a ſubſequent action, whereby the property of the ſubject arreſted may be adjudged to him. It therefore does not, by the latter practice, fall by the death of the arreſtee; but continues to ſubſiſt, as a foundation for an action of forthcoming againſt his heir, while the ſubject arreſted remains *in medio*. Far leſs is arreſtment loſt, either by the death of the arreſter, or of the common debtor.

Looſing of arreſtment.

6. Where arreſtment proceeds on a depending action, it may be looſed by the common debtor's giving ſecurity to the arreſter for his debt in the event it ſhall be found due. Arreſtment founded on decrees, or on regiſtered obligations, which in the judgement of law are decrees, cannot be looſed but upon payment or conſignation; except, (1.) Where the term of payment of the debt is not yet come, or the condition has not yet exiſted. (2.) Where the arreſtment has proceeded on a regiſtered contract, in which the debts or mutual obligations are not liquid. (3.) Where the decree is ſuſpended, or turned into a libel; for, till the ſuſpenſion be diſcuſſed, or the pending action concluded, it cannot be known whether any debt be truly due. A looſing takes off the *nexus* which had been laid on the ſubject arreſted; ſo that the arreſtee may thereafter pay ſafely to his creditor, and the cautioner is ſubſtituted in place of the arreſtment, for the arreſter's ſecurity: yet the arreſter may, while the ſubject continues with the arreſtee, purſue him in a forthcoming, notwithſtanding the looſing.

Forthcoming or arreſtment.

7. Arreſtment is only an inchoated or begun diligence; to perfect it, there muſt be an action brought by the arreſter againſt the arreſtee, to make the debt or ſubject arreſted forthcoming. In this action, the common debtor muſt be called for his intereſt, that he may have an opportunity of excepting to the lawfulneſs or extent of the debt on which the diligence proceeded. Before a forthcoming can be purſued, the debt due by the common debtor to the arreſter muſt be liquidated; for the arreſter can be no further intitled to the ſubject arreſted than to the extent of the debt due to him by the common debtor. Where the ſubject arreſted is a ſum of money, it is, by the decree of forthcoming, directed to be paid to the purſuer towards ſatisfying his debt; where goods are arreſted, the judge ordains them to be expoſed to ſale, and the price to be delivered to the purſuer. So that, in either caſe, decrees of forthcoming are judicial aſſignations to the arreſter of the ſubject arreſted.

Preference in arreſtments.

8. In all competitions, regard is had to the dates, not of the grounds of debt, but of the diligences proceeding upon them. In the competition of arreſtments, the preference is governed by their dates, according to the priority even of hours, where it appears with any certainty which is the firſt. But, as arreſtment is but a begun diligence, therefore if a prior arreſter ſhall neglect to inſiſt in an action of forthcoming for ſuch a time as may be reaſonably conſtrued into a deſertion of

his begun diligence, he loſes his preference. But, as dereliction of diligence is not eaſily preſumed, the diſtance of above two years, between the firſt arreſtment and the decree of forthcoming, was found not to make ſuch a *mora* as to intitle the poſterior arreſter to a preference. This rule of preference, according to the dates of the ſeveral arreſtments, holds by the preſent practice, whether they have proceeded on a decree or on a dependence; on debts not yet payable, or on debts already payable; provided the pendency ſhall have been cloſed, or the debt have become payable, before the iſſue of the competition.

By act 23d Geo. III. § 2. it is enacted, that when a debtor is made bankrupt, in terms of the act 1696, as thereby extended (clxxxiii. 13.), all arreſtments which ſhall have been uſed for attaching any perſonal effects of ſuch bankrupt within thirty days prior to the bankruptcy, or within four kalendar months immediately ſubſequent, ſhall be *pari paſſu* preferable: and in order to ſave as far as poſſible the expence of a multiplicity of arreſtments, it is declared, that where the effects of a debtor are arreſted by any creditor within thirty days before the bankruptcy, or within four months after it, and a proceſs of forthcoming or multiple-poinding is brought in which ſuch arreſtment is founded on, it ſhall be competent for any other creditor producing his intereſt, and making his claim in the ſaid proceſs, at any time before the expiration of the ſaid four months, to be ranked in the ſame manner as if he had uſed the form of arreſtment; the expence of raiſing the proceſs, and of the diligence at the inſtance of the creditor who raiſes it, being always paid out of the common fund. We here again repeat, that the enactments of this ſtatute are only temporary, and not yet a permanent part of the law of Scotland, whatever they may become when the ſubject is reſumed by the legiſlature upon the expiry of the act.

9. In the competition of arreſtments with aſſignations, an aſſignation by the common debtor, intimated before arreſtment, is preferable to the arreſtment. If the aſſignation is granted before arreſtment, but not intimated till after it, the arreſter is prefered.

Poinding.

10. Poinding is that diligence affecting moveable ſubjects, by which their property is carried directly to the creditor. No poinding can proceed, till a charge be given to the debtor to pay or perform, and the days thereof be expired, except poindings againſt vaſſals for their feu-duties, and poindings againſt tenants for rent, proceeding upon the landlord's own decree; in which the ancient cuſtom of poinding without a previous charge continues. A debtor's goods may be poinded by one creditor, though they have been arreſted before by another; for arreſtment being but an imperfect diligence, leaves the right of the ſubject ſtill in the debtor, and ſo cannot hinder any creditor from uſing a more perfect diligence, which has the effect of carrying the property directly to himſelf.

11. No cattle pertaining to the plough, nor inſtruments of tillage, can be poinded in the time of labouring or tilling the ground, unleſs where the debtor has no other goods. By labouring time is underſtood, that time, in which that tenant, whoſe goods are to be poinded, is ploughing, though he ſhould have been earlier or later than his neighbours; but ſummer fallowing does not fall under this rule.

Form thereof.

12. In the execution of poinding, the debtor's goods muſt be appraiſed, firſt on the ground of the lands where they are laid hold on, and a ſecond time at the market-croſs of the juriſdiction, by the ſtated appraiſers thereof; or, if there be none, by perſons named by the meſſenger or other officer employed in the diligence. Next, the meſſenger muſt, after public intimation by three oyeſſes, declare the value of the goods according to the ſecond appraiſement, and require the debtor to make payment of the debt, including intereſt and expences. If payment ſhall be offered to the creditor, or in his abſence to his lawful attorney; or if, in caſe of refuſal by them, conſignation of the debt ſhall be made in the hands of the judge-ordinary or his clerk, the goods muſt be left with the debtor; if not, the meſſenger ought to adjudge and deliver them over, at the appraiſed value, to the uſer of the diligence towards his payment: and the debtor is intitled to a copy of the warrant and executions, as a voucher that the debt is diſcharged in whole or in part by the goods poinded.

Powers of meſſengers in poinding.

13. Miniſters may poind for their ſtipends, upon one appraiſement on the ground of the lands, and landlords were always in uſe to poind ſo, for their rents. Appraiſement of the goods at the market-croſs of the next royal borough, or even of the next head-borough of ſtewartry or regality, though theſe juriſdictions be aboliſhed, is declared as ſufficient as if they were carried to the head-borough of the ſhire. Poinding, whether it be conſidered as a ſentence, or as the execution of a ſentence, muſt be proceeded in between ſun-riſing and ſun-ſetting; or at leaſt it muſt be finiſhed before the going off of day-light.—The powers of the officer employed in the execution of poindings, are not clearly defined by cuſtom, in the caſe of a third party claiming the property of the goods to be poinded. This is certain, that he may take the oath of the claimant, upon the verity of his claim; and if from thence it ſhall appear that the claimant's title is colluſive, he ought to proceed in the diligence; but if there remains the leaſt doubt, his ſafeſt courſe is to deliver the goods to the claimant, and to expreſs in his execution the reaſons why poinding did not proceed.

14. Any perſon who ſtops a poinding *via facti*, on groundleſs pretences, is liable, both criminally, in the pains of deforcement (ſee N° clxxxvi. 15.), and civilly, in the value of the goods which might have been poinded by the creditor.

By the foreſaid ſtatute 23d Geo. III. § 4. it is declared, that after a perſon is rendered bankrupt, as thereby directed, no poinding of the moveables belonging to ſuch bankrupt, within 30 days before his bankruptcy, or within four kalendar months thereafter, ſhall give a preference to ſuch poinder over the other lawful creditors of the bankrupt; but the goods ſo poinded ſhall be conſidered *in medio*, and the perſon receiving the price of them ſhall be liable to make the ſame furthcoming ſo as that all the other creditors of the bankrupt who are poſſeſſed of liquidate grounds of debts or decrees for payment, ſhall be intitled to their proportion of the ſame; provided they make their claim by ſummoning the poinder at any time before the expiration of the ſaid four months, deducting always the expence of ſuch poinding from the firſt end of the price of ſuch goods, together with 20 *per cent.* on the appraiſed value, which the poinder ſhall retain to account of his debt in preference to the other creditors; reſerving liberty to him to rank on the remaining ſum for the full amount of the debt contained in his diligence. And it is by the ſaid act further declared, that where any perſon concerned in trade or manufactures is bankrupt, as before mentioned, it may be lawful for any creditor, to the amount of L. 100, or any two creditors to the amount of L. 150, or any three or more creditors to the amount of L. 200 or upwards, to apply for ſequeſtration of the eſtate real and perſonal belonging to the debtor: after awarding which an interim factor, and then a truſtee, ſhall be choſen by the creditors who is to conduct the buſineſs of the ſequeſtration, according to the various rules fixed and laid down by the ſtatute. The act, however, expreſsly excludes all others, except thoſe concerned in trade or manufactures from the benefit of the ſequeſtration; but it is probable, when it comes to be renewed or digeſted in another form, this part of it will ſuffer an alteration.

clxxix.

SECT. XIX. *Of Preſcription.*

Preſcription,

PRESCRIPTION, which is a method, both of eſtabliſhing and extinguiſhing property, is either *poſitive* or *negative*. *Poſitive* preſcription is generally defined, as the Roman *uſucapio*. The acquiſition of property (it ſhould rather be, when applied to the law, the ſecuring it againſt all further challenge) by the poſſeſſor's continuing his poſſeſſion for the time which law has declared ſufficient for that purpoſe: *negative*, is the loſs or omiſſion of a right, by neglecting to follow it forth, or uſe it, during the whole time limited by law. The doctrine of preſcription, which is, by ſome writers, condemned as contrary to juſtice, has been introduced, that the claims of negligent creditors might not ſubſiſt for ever, that property might be at laſt fixed, and forgeries diſcouraged, which the difficulty of detecting muſt have made exceedingly frequent, if no length of time had limited the legal effect of writings.

Poſitive.

2. Poſitive preſcription was firſt introduced into the law by 1617, c. 12. which enacts, that whoever ſhall have poſſeſſed his lands, annualrents or other heritages, peaceably, in virtue of infeſtments, for 40 years continually after their dates, ſhall not thereafter be diſquieted in his right by any perſon pretending a better title. Under *heritages* are comprehended every right that is *fundo annexum*, and capable of continual poſſeſſion. Continued poſſeſſion, if proved as far back as the memory of man, preſumes poſſeſſion upwards to the date of the infeſtment. The whole courſe of poſſeſſion muſt by the act be founded on ſeiſins; and conſequently no part thereof on the bare right of apparency: but 40 years poſſeſſion, without ſeiſin, is ſufficient in the preſcription of ſuch heritable rights as do not require ſeiſin. The poſſeſſion muſt alſo be without any *lawful* interruption, *i. e.* it muſt neither be interrupted *via facti*, nor *via juris*. The preſcription of ſubjects not expreſſed in the infeſtment as part and pertinent of another ſubject ſpecially expreſſed, has been explained, N° clxvii. 6.

3. The act requires, that the poſſeſſor produce, as his title of preſcription, a charter of the lands preceding the 40 years poſſeſſion, with the ſeiſin following on it; and where there is no charter extant, ſeiſins, one or more, ſtanding together for 40 years, and proceeding either on retours or precepts of *clare conſtat*. This has given riſe to a reaſonable diſtinction obſerved in practice, between the preſcription of a ſingular ſucceſſor, and of an heir. Singular ſucceſſors muſt produce for their title of preſcription, not only a ſeiſin, but its warrant, as a charter, diſpoſition, &c. either in their own perſon, or in that of their author: but the production, by an heir, of ſeiſins, one or more, ſtanding together for 40 years, and proceeding on retours or precepts of *clare conſtat*, is ſufficient. The heir is not obliged to produce the retours or precepts on which his ſeiſins proceed, nor is the ſingular ſucceſſor obliged to produce the ground of his charter; ſo that if the title of preſcription produced be a fair deed, and a ſufficient title of property, the poſſeſſor is ſecure by the act, which admits no ground of challenge, but falſehood. A ſpecial ſtatute, for eſtabliſhing the poſitive preſcription in moveable rights, was not neceſſary; for, ſince a title in writing is not requiſite for the acquiring of theſe, the negative preſcription, by which all right of action for recovering their property is cut off, effectually ſecures the poſſeſſor.

Negative preſcription.

4. The negative preſcription of obligations, by the lapſe of 40 years, was introduced into the law long before the poſitive, (1469, c. 29.—1474, c. 55.) This preſcription is now amplified by the foreſaid act (1617), which has extended it to all actions competent upon heritable bonds, reverſions, and others whatſoever; unleſs where the reverſions are either incorporated in the body of the wadſet-right, or regiſtered in the regiſter of reverſions: And reverſions ſo incorporated, or regiſtered, are not only exempted from the negative preſcription, but they are an effectual bar againſt any perſon from pleading the poſitive.

A ſhorter negative preſcription.

5. A ſhorter negative preſcription is introduced by ſtatute, in certain rights and debts. Actions of ſpuilzie, ejection, *and others of that nature*, muſt be purſued within three years after the commiſſion of the fact on which the action is founded. As in ſpuilzies and ejections, the purſuer was entitled, *in odium* of violence, to a proof by his own oath *in litem*, and to the violent profits againſt the defender, the ſtatute meant only to limit theſe ſpecial privileges by a three years preſcription, without cutting off the right of action, where the claim is reſtricted to ſimple reſtitution. Under the general words, *and others of that nature*, are comprehended all actions where the purſuer is admitted to prove his libel by his own oath *in litem*.

Preſcription of ſervants fees, &c.

6. Servants fees, houſe-rents, mens ordinaries, (*i. e.* money due for board), and merchants accounts, fall under the triennial preſcription, (by 1579, c. 83.) There is alſo a general clauſe ſubjoined to this ſtatute, of *other the like debts*, which includes alimentaty debts, wages due to workmen, and accounts due to writers, agents, or procurators. Theſe debts may, by this act, be proved after the three years, either by the writing or oath of the debtor; ſo that they preſcribe only as to the mean of proof by witneſſes; but after the three years, it behoves the creditor to refer to the debtor's oath, not only the conſtitution, but the ſubſiſtence of the debt. In the preſcription of houſe-rents, ſervants fees, and alimony, each term's rent, fee, or alimony, runs a ſeparate courſe of preſcription; ſo that in an action for theſe the claim will be reſtricted to the arrears incurred within the three years immediately

before the citation: But, in accounts, preſcription does not begin till the laſt article; for a ſingle article cannot be called an account. Actions of removing muſt alſo be purſued within three years after the warning. Reductions of erroneous retours preſcribe, if not purſued within 20 years.

Of miniſters ſtipends, &c.

7. Miniſters ſtipends and multures preſcribe in five years after they are due; and arrears of rent, five years after the tenant's removing from the lands. As the preſcription of mails and duties was introduced in favour of poor tenants, that they might not ſuffer by neglecting to preſerve their diſcharges, a proprietor of lands ſubject to a liferent, who had obtained a leaſe of all the liferented lands from the liferenter, is not intitled to plead it, nor a tackſman of one's whole eſtate, who had by the leaſe a power of removing tenants. Bargains concerning moveables, or ſums of money which are proveable by witneſſes, preſcribe in five years after the bargain. Under theſe are included ſales, locations, and all other conſenſual contracts, to the conſtitution of which writing is not neceſſary. But all the abovementioned debts, may, after the five years, be proved, either by the oath or the writing of the debtor; of which above, (par. 6.) A quinquennial preſcription is eſtabliſhed in arreſtments, whether on decrees or depending actions: The firſt preſcribe in five years after uſing the arreſtment, and the laſt in five years after ſentence is pronounced on the depending action.

Limitation of cautionry.

8. No perſon binding for or with another, either as cautioner or co-principal, in a bond or contract for a ſum of money, continues bound after ſeven years from the date of the bond, provided he has either a clauſe of relief in the bond, or a ſeparate bond of relief, intimated to the creditor, at his receiving the bond. But all diligence uſed within the ſeven years againſt the cautioner ſhall ſtand good. As this is a public law, intended to prevent the bad conſequences of raſh engagements, its benefit cannot, before the lapſe of the ſeven years, be renounced by the cautioner. As it is correctory, it is ſtrictly interpreted: Thus, bonds bearing a mutual clauſe of relief *pro rata*, fall not under it; nor bonds of corroboration nor obligations, where the condition is not purified, or the term of payment not come within the ſeven years; becauſe no diligence can be uſed on theſe. The ſtatute excludes all cautionries for the faithful diſcharge of offices; theſe not being obligations in a bond or contract for ſums of money. And practice has denied the benefit of it to all judicial cautioners, as cautioners in a ſuſpenſion.—Actions of count and reckoning, competent either to minors againſt their tutors or curators, or *vice verſa*, preſcribe in ten years after the majority or death of the minor.

Preſcription of holograph writings.

9. Holograph bonds, miſſive letters, and books of account, not atteſted by witneſſes, preſcribe in 20 years, unleſs the creditor ſhall thereafter prove the verity of the ſubſcription by the debtor's oath. It is therefore ſufficient to ſave from the effect of this preſcription, that the conſtitution of the debt be proved by the party's oath after the 20 years; whereas, in ſtipends, merchants accounts, &c. not only the conſtitution, but the ſubſiſtence of the debt, muſt be proved by writing or the debtor's oath, after the term of preſcription. Some lawyers extend this preſcription of holograph writings to all obligations for ſums not exceeding L. 100 *Scots*, which are not atteſted by witneſſes; becauſe though theſe are in practice ſuſtained, yet they ought not to have the ſame duration with deeds atteſted by witneſſes. Though in the ſhort preſcriptions of debts, the right of action is for ever loſt, if not exerciſed within the time limited; yet where action was brought on any of thoſe debts, before the preſcription was run, it ſubſiſted, like any other right, for 40 years. As this defeated the purpoſe of the acts eſtabliſhing theſe preſcriptions, all proceſſes upon warnings, ſpuilzies, ejections, or arreſtments, or for payment of the debts contained in act 1669, *c.* 9. are by the ſaid act, joined with 1685, *c.* 14. declared to preſcribe in five years, if not wakened within that time; ſee N° clxxxiii. 26.

Extinction of obligations by taciturnity.

10. Certain obligations are loſt by the lapſe of leſs than 40 years, without the aid of ſtatute, where the nature of the obligation, and the circumſtances of parties, juſtify it: thus, bills which are not intended for laſting ſecurities, produced no action, where the creditor had been long ſilent, unleſs the ſubſtance of the debt be proved by the debtor's oath; but the preciſe time was not fixed by practice. But the duration of bills is now limited to ſix years by the 12 Geo. III.; rendered perpetual by 23 Geo. III. Thus alſo, a receipt for bills granted by a writer to his employer, not inſiſted upon for 23 years, was found not productive of an action. The preſcriptions of the reſtitution of minors, of the benefit of inventory, &c. are explained in their proper places.

Bona fides preſcription.

11. In the poſitive preſcription, as eſtabliſhed by the act 1617, the continued poſſeſſion for 40 years, proceeding upon a title of property not chargeable with falſehood, ſecures the poſſeſſor againſt all other grounds of challenge, and ſo preſumes *bona fides, præſumptione juris et de jure.* In the long negative preſcription, *bona fides* in the debtor is not required: the creditor's neglecting to inſiſt for ſo long a time, is conſtrued as an abandoning of his debt, and ſo is equivalent to a diſcharge. Hence, though the ſubſiſtence of the debt ſhould be referred to the debtor's own oath, after the 40 years, he is not liable.

Preſcription, againſt whom it runs.

12. Preſcription runs *de momento in momentum*: the whole time defined by law muſt be completed, before a right can be either acquired or loſt by it; ſo that interruption, made on the laſt day of the 40th year, breaks its courſe. The poſitive preſcription runs againſt the ſovereign himſelf, even as to his annexed property; but it is generally thought he cannot ſuffer by the negative: he is ſecured againſt the negligence of his officers in the management of proceſſes, by expreſs ſtatute, 1600, *c.* 14. The negative, as well as the poſitive preſcription, runs againſt the church, though churchmen have but a temporary intereſt in their benefices. But becauſe the rights of beneficiaries to their ſtipends are liable to accidents, through the frequent change of incumbents, 13 years poſſeſſion does, by a rule of the Roman chancery which is adopted in law, found a preſumptive title in the beneficiary; but this is not properly preſcription; for if by titles recovered, perhaps out of the incumbent's own hands, it ſhall appear that he has poſſeſſed tithes or other ſubjects to a greater extent than he ought, his poſſeſſion will be reſtricted accordingly. This right

muſt not be confounded with that eſtabliſhed in favour of churchmen, which is confined to church lands and rents, and conſtitutes a proper preſcription upon a poſſeſſion of 30 years.

13. The clauſe in the act 1617, ſaving minors from preſcription, is extended to the poſitive, as well as to the negative preſcription; but the exception of minority is not admitted in caſe of hoſpitals for children, where there is a continual ſucceſſion of minors, that being a *caſus inſolitus*. Minors are expreſsly excepted in ſeveral of the ſhort preſcriptions, as 1579, *c.* 18.——1669, *c.* 9.; but where law leaves them in the common caſe, they muſt be ſubject to the common rules.

14. Preſcription does not run *contra non valentem agere*, againſt one who is barred, by ſome legal incapacity, from purſuing; for in ſuch caſe, neither negligence nor dereliction can be imputed to him. This rule is, by a favourable interpretation, extended to wives, who *ex reverentia maritali* forbear to purſue actions competent to them againſt their huſbands. On the ſame ground, preſcription runs only from the time that the debt or right could be ſued upon. Thus, inhibition preſcribes only from the publiſhing of the deed granted to the inhibiter's prejudice; and in the preſcription of removings, the years are computed only from the term at which the defender is warned to remove. Neither can preſcription run againſt perſons who are already in poſſeſſion, and ſo can gain nothing by a purſuit. Thus, where a perſon, who has two adjudications affecting the ſame lands, is in poſſeſſion upon one of them, preſcription cannot run againſt the other during ſuch poſſeſſion.

Certain rights incapable of preſcription.

15. Certain rights are incapable of preſcription: (1.) Things that law has exempted from commerce. (2.) *Res meræ facultatis*, e. g. a faculty to charge a ſubject with debts, to revoke, &c. cannot be loſt by preſcription; for faculties may, by their nature, be exerciſed at any time; hence, a proprietor's right of uſing any act of property on his own grounds, cannot be loſt by the greateſt length of time. (3.) Exceptions competent to a perſon for eliding an action, cannot preſcribe, unleſs the exception is founded on a right productive of an action, *e. g.* compenſation; ſuch right muſt be inſiſted on within the years of preſcription. (4.) Obligations of yearly penſions or payments, though no demand has been made on them for 40 years, do not ſuffer a total preſcription, but ſtill ſubſiſt as to the arrears fallen due within that period; becauſe preſcription cannot run againſt an obligation till it be payable, and each year's penſion or payment is conſidered as a ſeparate debt.

16. No right can be loſt *non utendo* by one, unleſs the effect of that preſcription be to eſtabliſh it in another. Hence the rule ariſes, *juri ſanguinis nunquam præſcribitur*. Hence alſo, a proprietor of land cannot loſe his property by the negative preſcription, unleſs he who objects it can himſelf plead the poſitive. On the ſame ground, a ſuperior's right of feu-duties cannot be loſt *non utendo*; becauſe, being inherent in the ſuperiority, it is truly a right of lands that cannot ſuffer the negative preſcription, except in favour of one who can plead the poſitive; which the vaſſal cannot do, being deſtitute of a title. This rule applies alſo to parſonage tithes, which are an inherent burden upon all lands not ſpecially exempted; and from which therefore the perſon liable cannot preſcribe an immunity; by bare non payment: but ſuch vicarage tithes as are only due where they are eſtabliſhed by uſage, may be loſt by preſcription. In all theſe caſes, though the radical right cannot ſuffer the negative preſcription, the bygone duties, not demanded within the 40 years, are loſt to the proprietor, ſuperior, or titular.

Interruption of preſcription.

17. Preſcription may be interrupted by any deed whereby the proprietor or creditor uſes his right or ground of debt. In all interruptions, notice muſt be given to the poſſeſſor of the ſubject, or the debtor, that the proprietor or creditor intends to ſue upon his right. All writings whereby the debtor himſelf acknowledges the debt, and all proceſſes for payment brought, or diligences uſed againſt him upon his obligation, by horning, inhibition, arreſtment, &c. muſt be effectual to interrupt preſcription.

18. Interruptions, by citation upon libelled ſummonſes, where they are not uſed by a minor, preſcribe, if not renewed every ſeven years: but where the appearance of parties, or any judicial act has followed thereupon, it is no longer a bare citation, but an action which ſubſiſts for 40 years. It has been found, that the ſexennial preſcription of bills is not interrupted by a blank citation, as practiſed in the court of admiralty. Citations for interrupting the preſcription of real rights muſt be given by meſſengers; and the ſummonſes, on which ſuch citations proceed, muſt paſs the ſignet upon the bill, and be regiſtered within 60 days after the execution, in a particular regiſter appointed for that purpoſe: and where interruption of real rights is made *via facti*, an inſtrument muſt be taken upon it, and recorded in the ſaid regiſter; otherwiſe it can have no effect againſt ſingular ſucceſſors.

19. Interruption has the effect to cut off the courſe of preſcription, ſo that the perſon preſcribing can avail himſelf of no part of the former time, but muſt begin a new courſe, commencing from the date of the interruption. Minority, therefore, is no proper interruption: for it neither breaks the courſe of preſcription, nor is it a document or evidence taken by the minor on his right: it is a perſonal privilege competent to him, by which the operation of the preſcription is indeed ſupended during the years of minority, which are therefore diſcounted from it; but it continues to run after majority, and the years before and after the minority may be conjoined to complete it. The ſame doctrine applies to the privilege ariſing from one's incapacity to act.

20. Diligence uſed upon a debt, againſt any one of two or more co-obligants, preſerves the debt itſelf, and ſo interrupts preſcription againſt all of them; except in the ſpecial caſe of cautioners, who are not affected by any diligence uſed againſt the principal debtor. In the ſame manner, a right of annualrent, conſtituted upon two ſeparate tenements, is preſerved as to both from the negative preſcription, by diligence uſed againſt either of them. But whether ſuch diligence has alſo the effect to hinder the poſſeſſor of the other tenement by ſingular titles from the benefit of the poſitive preſcription, may be doubted.

III. OF SUCCESSION.

Sect. XX. *Of ſucceſſion in heritable rights.*

Succeſſors ſingular and univerſal.

Singular ſucceſſors are thoſe who ſucceed to a perſon yet alive, in a ſpecial ſubject by ſingular titles; but ſucceſſion, in its proper ſenſe, is a method of tranſmitting rights from the dead to the living. Heritable rights deſcend by ſucceſſion to the *heir* properly ſo called; moveable rights to the *executors*, who are ſometimes ſaid to be heirs in moveables. Succeſſion is either by *ſpecial deſtination*, which deſcends to thoſe, named by the proprietor himſelf; or *legal*, which devolves upon the perſons whom the law marks out for ſucceſſors, from a preſumption, that the proprietor would have named them had he made a deſtination. The firſt is in all caſes preferred to the other, as preſumption muſt yield to truth.

Order of ſucceſſion in heritage.

2. In the ſucceſſion of heritage, the heirs at law are otherwiſe called heirs general, heirs whatſoever, or heirs of line; and they ſucceed by the right of blood, in the following order. Firſt, deſcendents; among theſe, ſons are preferred to daughters, and the eldeſt ſon to all the younger. Where there are daughters only, they ſucceed equally, and are called heirs-portioners. Failing immediate deſcendents, grandchildren ſucceed; and in default of them, great-grandchildren; and ſo on *in infinitum:* preferring, as in the former caſe, males to females, and the eldeſt male to the younger.

Collaterals.

3. Next after deſcendents, collaterals ſucceed; among whom the brothers *german* of the deceaſed have the firſt place. But as, in no caſe, the legal ſucceſſion of heritage is, by the law of Scotland, divided into parts, unleſs where it deſcends to females; the immediate younger brother of the deceaſed excludes the reſt, according to the rule, *heritage deſcends*. Where the deceaſed is himſelf the youngeſt, the ſucceſſion goes to the immediate elder brother, as being the leaſt deviation from this rule. If there are no brothers german, the ſiſters german ſucceed equally: then brothers *conſanguinean*, in the ſame order as brothers german; and failing them, ſiſters *conſanguinean* equally. Next, the father ſucceeds. After him, his brothers and ſiſters, according to the rules already explained; then the grand-father; failing him, his brothers and ſiſters; and ſo upwards, as far back as propinquity can be proved.

No ſucceſſion by the mother.

Though children ſucceed to their mother, a mother cannot to her child; nor is there any ſucceſſion by the law through the mother of the deceaſed; in ſo much that one brother *uterine, i. e.* by the mother only, cannot ſucceed to another, even in that eſtate which flowed originally from their common mother.

Succeſſion *in capita* and *in ſtirpe.*

4. In heritage there is a *right of repreſentation*, by which one ſucceeds, not from any title in himſelf, but in the place, and as repreſenting ſome of his deceaſed aſcendents. Thus, where one leaves a younger ſon, and a grandchild by his eldeſt, the grandchild, though farther removed in degree from the deceaſed than his uncle, excludes him, as coming in place of his father the eldeſt ſon. Hence ariſes the diſtinction between ſucceſſion *in capita*, where the diviſion is made into as many equal parts as there are *capita* or heirs, which is the caſe of heirs-portioners; and ſucceſſion *in ſtirpes*, where the remoter heirs draw no more among them than the ſhare belonging to their aſcendent or *ſtirps*, whom they repreſent; an example of which may be figured in the caſe of one who leaves behind him a daughter alive, and two grand-daughters by a daughter deceaſed. In which caſe the two grand-daughters would ſucceed equally to that half which would have belonged to their mother had ſhe been alive.

Succeſſion of heirs-portioners.

4. In the ſucceſſion of heirs-portioners, indiviſible rights, *e. g.* titles of dignity, fall to the eldeſt ſiſter. A ſingle right of ſuperiority goes alſo to the eldeſt; for it hardly admits a diviſion, and the condition of the vaſſal ought not to be made worſe by multiplying ſuperiors upon him. Where there are more ſuch rights, the eldeſt may perhaps have her election of the beſt; but the younger ſiſters are intitled to a recompence, in ſo far as the diviſions are unequal; at leaſt, where the ſuperiorities yield a conſtant yearly rent. The principal ſeat of the family falls to the eldeſt, with the garden and orchard belonging to it, without recompence to the younger ſiſters; but all other houſes are divided amongſt them, together with the lands on which they are built, as parts and pertinents of theſe lands. A *præcipuum*, however, is due only in the caſe of ſucceſſion of heirs-portioners *ab inteſtato*; and therefore there is no place for it where the ſucceſſion is taken under a deed.

Heir of conqueſt.

6. Thoſe heritable rights, to which the deceaſed did himſelf ſucceed as heir to his father or other anceſtor, get ſometimes the name of heritage in a ſtrict ſenſe, in oppoſition to the *feuda nova*, or feus of conqueſt, which he had acquired by ſingular titles, and which deſcend, not to his heir of line, but of conqueſt. This diſtinction obtains only where two or more brothers or uncles, or their iſſue, are next in ſucceſſion; in which caſe, the immediate younger brother, as heir of line, ſucceeds to the proper heritage, becauſe that deſcends; whereas the conqueſt aſcends to the immediate elder brother. It has no place in female ſucceſſion, which the law divides equally among the heirs-portioners. Where the deceaſed was the younger brother, the immediate elder brother is heir both of line and of conqueſt. An eſtate diſponed by a father to his eldeſt ſon, is not conqueſt in the ſon's perſon, but heritage; becauſe the ſon would have ſucceeded to it, though there had been no diſpoſition. The heir of conqueſt ſucceeds to all rights affecting land, which require ſeiſin to perfect them. But teinds go to the heir of line; becauſe they are merely a burden on the fruits, not on the land. Tacks do not fall under conqueſt, becauſe they are complete rights without ſeiſin; nor perſonal bonds taken to heirs ſecluding executors.

Heirſhip-moabvees.

7. The heir of line is intitled to the ſucceſſion, not only of ſubjects properly heritable, but to that ſort of moveables called *heirſhip*, which is the beſt of certain kinds. This doctrine has been probably introduced, that the heir might not have an houſe and eſtate to ſucceed to, quite diſmantled by the executor. In that ſort which goes by pairs or dozens, the beſt pair or dozen is the heirſhip. There is no heirſhip in fungibles, or things eſtimated by quantity; as grain, hay, current money, &c. To intitle an heir to this privilege, the deceaſed muſt have been either, (1.) A prelate: (2.) A

baron, *i. e.* who ſtood inſeft at his death in lands, tho' not erected into a barony; or even in a right of annualrent: Or, (3.) A burgeſs; not an honorary one, but a trading burgeſs of a royal borough, or at leaſt one intitled to enter burgeſs in the right of his anceſtor. Neither the heir of conqueſt, nor of tailzie, has right to heirſhip-moveables.

Succeſſion by deſtination.

8. As to ſucceſſion by deſtination, no proprietor can ſettle any heritable eſtate, in the proper form a teſtament; not even bonds ſecluding executors, tho' theſe are not heritable *ex ſua natura*: But, where a teſtament is in part drawn up in the ſtyle of a deed *inter vivos*, ſuch part of it may contain a ſettlement of heritage, though executors ſhould be named in the teſtamentary part. The common method of ſettling the ſucceſſion of heritage is by diſpoſition, contract of marriage, or ſimple procuratory of reſignation: and, tho' a diſpoſition ſettling heritage ſhould have neither precept nor procuratory, it founds an action againſt the heir of line to complete his titles to the eſtate; and thereafter diveſt himſelf in favour of the diſponee. The appellation of tailzie, or entail, is chiefly uſed in the caſe of a land eſtate, which is ſettled on a long ſeries of heirs ſubſtituted one after another. The perſon firſt called in the tailzie, is the inſtitute; the reſt, the heirs of tailzie, or the ſubſtitutes.

Tailzies.

9. Tailzies, when conſidered in relation to their ſeveral degrees of force, are either, (1.) Simple deſtinations: (2.) Tailzies with prohibitory clauſes (3.) Tailzies with prohibitory, reſolutive, and irritant clauſes. That is a ſimple deſtination, where the perſons called to the ſucceſſion are ſubſtituted one after another, without any reſtraint laid on the exerciſe of their property. The heirs, therefore, ſucceeding to ſuch eſtate, are abſolute fiars, and conſequently may alter the deſtination at pleaſure.

10. In tailzies with clauſes prohibitory, *e. g.* declaring that it ſhall not be lawful to the heirs to contract debts or alien the lands in prejudice of the ſucceſſion, none of the heirs can alien gratuitouſly. But the members of entail may contract debts which will be effectual to the creditors, or may diſpoſe of the eſtate for onerous cauſes. In both theſe ſorts, the maker himſelf may alter the tailzie; except, (1.) Where it has been granted for an onerous cauſe, as in mutual tailzies; or (2.) Where the maker is expreſsly diſabled, as well as the inſtitute or the heirs.

Their requiſites.

11. Where a tailzie is guarded with irritant and reſolutive clauſes, the eſtate entailed cannot be carried off by the debt, or deed, of any of the heirs ſucceeding thereto, in prejudice of the ſubſtitutes. It was long doubted, whether ſuch tailzies ought to be effectual, even where the ſuperior's conſent was adhibited; becauſe they ſunk the property of eſtates, and created a perpetuity of liferents. They were firſt explicitly authoriſed by 1685, *c.* 22. By this ſtatute, the entail muſt be regiſtered in a ſpecial regiſter eſtabliſhed for that purpoſe; and the irritant and reſolutive clauſes muſt be inſerted, not only in the procuratories, precepts, and ſeiſins, by which the tailzies are firſt conſtituted, but in all the after conveyances thereof; otherwiſe they can have no force againſt ſingular ſucceſſors, But a tailzie, even without theſe requiſites, is effectual againſt the heir of the granter, or againſt the inſtitute who accepts of it. It has been found, that an entail, tho' completed by infeſtment before the act 1685, was ineffectual, becauſe not recorded in terms of the act.

Heirs of entail, their powers and reſtrictions.

12. An heir of entail has full power over the entailed eſtate, except in ſo far as he is expreſsly fettered; and as entails are an unfavourable reſtraint upon property, and a frequent ſnare to trading people, they are *ſtrictiſſimi juris*: ſo that no prohibition or irritancies are to be inferred by implication. By 10 George III. *c.* 51. heirs of entail are intitled (notwithſtanding any reſtrictions in the deed of entail) to improve their eſtates by granting leaſes, building farm-houſes, draining, incloſing, and excambing, under certain limitations, and to claim repayment of three-fourths of the expence from the next heir of entail.—This act extends to all tailzies, whether made prior or poſterior to the 1685.

Contravention, by whom inferred.

13. An heir, who counteracts the directions of the tailzie, by alienating any part of the eſtate, charging it with debt, &c is ſaid to contravene. It is not the ſimple contracting of debt that infers contravention; the lands entailed muſt be actually adjudged upon the debt contracted. An heir may, where he is not expreſsly barred, ſettle rational proviſions on his wife and children, without incurring contravention. It is not quite clear whether the heirs alſo of the contravener would forfeit their right from the acts or deeds of their predeceſſor where there is no expreſs clauſe in the entail ſettling it; and though the words of the act 1685 (which declares, that entails executed according to the directions of it, ſhall be effectual not only againſt the contravener and his heirs, but againſt creditors), may ſeem to favour the idea that heirs alſo would forfeit, the more favourable opinion has received the ſanction of the ſupreme court. For the greater ſecurity, however, a clauſe is now uſually inſerted in tailzies, declaring, that the contravention of the heir in poſſeſſion ſhall not affect his deſcendants, when ſuch is the intention of the granter.

In what caſes an heir may ſell.

14. When the heirs of the laſt perſon ſpecially called in a tailzie come to ſucceed, the irritancies have no longer any perſon in favour of whom they can operate; and conſequently, the fee, which was before tailzied, becomes ſimple and unlimited in the perſon of ſuch heirs. By the late act 20th Geo. II. for aboliſhing wardholdings, the king may purchaſe lands within Scotland, notwithſtanding the ſtricteſt entail; and where the lands are in the hands of minors or fatuous perſons, his majeſty may purchaſe them from the curators or guardians. And heirs of entail may ſell to their vaſſals the ſuperiorities belonging to the entailed eſtate; but in all theſe caſes, the price is to be ſettled in the ſame manner that the lands or ſuperiorities ſold were ſettled before the ſale.

Rights taken in conjunct fee.

15. Rights, not only of land-eſtates, but of bonds, are ſometimes granted to two or more perſons in conjunct fee. Where a right is ſo granted to two ſtrangers, without any ſpecial clauſe adjected to it, each of them has an equal intereſt in the fee, and the part of the deceaſed deſcends to his own heir. If the right be taken to the two jointly, and the *longeſt liver* and their heirs, the ſeveral ſhares of the conjunct fiars are affectable by their creditors during their lives: but, on the death of any one of them, the ſurvivor has the fee of the whole, in ſo far as the ſhare of the predeceaſed remains free, after payment of his debts. Where the right is taken to the two in conjunct fee, and to the

heirs of one of them, he to whoſe heirs the right is taken is the only fiar; the right of the other reſolves into a ſimple liferent: yet where a father takes a right to himſelf and his ſon jointly, and to the ſon's heirs, ſuch right being gratuitous, is not underſtood to ſtrip the father of the fee, unleſs a contrary intention ſhall plainly appear from the tenor of the right.

16. Where a right is taken to a huſband and wife, in conjunct fee and liferent, the huſband, as the *perſona dignior*, is the only fiar: the wife's right reſolves into a liferent, unleſs it be preſumable, from ſpecial circumſtances, that the fee was intended to be in the wife. Where a right of moveables is taken to huſband and wife, the heirs of both ſucceed equally, according to the natural meaning of the words.

Heirs of proviſion.

17. Heirs of proviſion are thoſe who ſucceed to any ſubject, in virtue of a proviſion in the inveſtiture, or other deed of ſettlement. This appellation is given moſt commonly to heirs of a marriage. Theſe are more favourably regarded than heirs by ſimple deſtination, who have only the hope of ſucceſſion; for heirs of a marriage, becauſe their proviſions are conſtituted by an onerous contract, cannot be diſappointed of them by any gratuitous deed of the father. Nevertheleſs, as their right is only a right of ſucceſſion, which is not deſigned to reſtrain the father from granting onerous or rational deeds, he continues to have the full power of ſelling the ſubject, or charging it with debts, unleſs a proper right of credit be given to the heir by the marriage contract, *e. g.* if the father ſhould oblige himſelf to infeſt the heir in the lands, or make payment of the ſum provided againſt a day certain, or when the child attains a certain age, &c.; for ſuch rights, when perfected by infeſtment, or ſecured by diligence, are effectual againſt all the poſterior deeds of the father, even onerous.

Effects of proviſions to children.

18. Though all proviſions to children, by a marriage contract conceived in the ordinary form, being merely rights of ſucceſſion, are poſtponed to every onerous debt of the granter, even to thoſe contracted poſterior to the proviſions; yet where a father executes a bond of proviſion to a child actually exiſting, whether ſuch child be the heir of a marriage or not, a proper debt is thereby created, which, though it be without doubt gratuitous, is not only effectual againſt the father himſelf and his heirs, but is not reducible at the inſtance even of his prior onerous creditors, if he was ſolvent at the time of granting it. A father may notwithſtanding a firſt marriage-contract, ſettle a jointure on a ſecond wife, or provide for the children of a ſecond marriage; for ſuch ſettlements are deemed onerous; but where they are exorbitant, they will be reſtricted to what is rational: and in all ſuch ſettlements, where the proviſions of the firſt marriage-contract are encroached upon, the heirs of that marriage have recourſe againſt the father, in caſe he ſhould afterwards acquire a ſeparate eſtate, which may enable him to fulfil both obligations.

Proviſion to heirs.

19. In marriage-contracts, the conqueſt, or a certain part of it, is frequently provided to the iſſue; by which is underſtood whatever real addition ſhall be made to the father's eſtate during the marriage by purchaſe or donation. Conqueſt therefore muſt be free, *i. e.* what remains after payment of debts due by the father. As in other proviſions, ſo in conqueſt: the father is ſtill fiar, and may therefore diſpoſe of it for onerous or rational cauſes. Where heritable rights are provided to the *heirs* of a marriage, they fall to the eldeſt ſon, for he is the heir at law in heritage. Where a ſum of money is ſo provided, the word *heir* is applied to the ſubject of the proviſion, and ſo marks out the executor, who is the heir in moveables. When an heritable right is provided to the *bairns* (or iſſue) of a marriage, it is divided equally among the children, if no diviſion be made by the father; for ſuch deſtination cuts off the excluſive right of the legal heir. No proviſion granted to bairns, gives a ſpecial right of credit to any one child, as long as the father lives: the right is granted *familiæ*; ſo that the whole muſt indeed go to one or other of them; but the father has a power inherent in him, to divide it among them, in ſuch proportions as he thinks beſt, yet ſo as none of them may be entirely excluded, except in extraordinay caſes.

To bairns.

Clauſe of return.

20. A clauſe of return is that, by which a ſum in a bond or other right, is in a certain event limited to return to the granter himſelf, or his heirs. When a right is granted for onerous cauſes, the creditor may defeat the clauſe of return, even gratuitouſly. But, where the ſum in the right flows from the granter, or where there is any other reaſonable cauſe for the proviſion of return in his favour, the receiver cannot diſappoint it gratuitouſly. Yet ſince he is fiar, the ſum may be either aſſigned by him for an onerous cauſe, or affected by his creditors.

Heirs.

21. An heir is, in the judgment of law, *eadem perſona cum defuncto*, and ſo repreſents the deceaſed univerſally, not only in his rights, but in his debts: in the firſt view, he is ſaid to be heir *activè*; in the ſecond, *paſſivè*. From this general rule are excepted, heirs ſubſtituted in a ſpecial bond, and even ſubſtituted in a diſpoſition *omnium bonorum*, to take effect at the granter's death; for ſuch ſubſtitutes are conſidered as ſingular ſucceſſors, and their right as an univerſal legacy, which does not ſubject the legatee *ultra valorem*, but heirs male or of tailzie, though their right be limited to ſpecial ſubjects, are liable, not merely to the extent of the ſubject entailed or provided, but *in ſolidum*; becauſe ſuch rights are deſigned to carry an univerſal character, and ſo infer an univerſal repreſentation of the granter. The heir of line is primarily liable for the debts of his predeceſſor; for he is the moſt proper heir, and ſo muſt be diſcuſſed before any other can be purſued; next to him the heir of conqueſt, becauſe he alſo ſucceeds to the *univerſitas* of the whole heritable rights which his predeceſſor had acquired by ſingular titles; then, the heir male, or of a mariage; for their propinquity of blood ſubjects them more directly than any other heir of tailzie, who may poſſibly be a ſtranger; and who for that reaſon is not liable to be diſcuſed, except for ſuch of the predeceſſor's debts or deeds as relate ſpecially to the lands tailzied; as to which he is liable even before the heir of line. Heirs portioners are liable *pro rata* for their predeceſſors debts; but if any of them prove inſolvent, the creditor may, after diſcuſſing her, inſiſt for her ſhare againſt the reſt, who will be liable in ſo far as they are *lucratæ* by the ſucceſſion. Where an heir, liable *ſubſidiare*, pays the predeceſſor's debt, he has relief againſt the heir who is more directly liable, in reſpect of whom he is not co-heir, but creditor.

Apparent heirs.

22. Before an heir can have an active title to his anceſtor's rights, he muſt be entered by ſervice and retour. He who is intitled to enter heir, is, before his actual entry, called *apparent heir.* The bare right of apparency carries certain privileges with it. An apparent heir may defend his anceſtor's titles againſt any third party who brings them under challenge. Tenants may ſafely pay him their rents; and after they have once acknowledged him by payment, he may compel them to continue it; and the rents not uplifted by the apparent heir belong to his executors, upon his death.

Jus deliberandi

23. As an heir is, by his entry, ſubjected univerſally to his anceſtor's debts, apparent heirs have therefore a year *(annus deliberandi)* allowed to them from the anceſtor's deceaſe, to deliberate whether they will enter or not; till the expiry of which, though they may be charged by creditors to enter, they cannot be ſued in any proceſs founded upon ſuch charge. Though declaratory actions, and others which contain no perſonal concluſion, may be purſued againſt the apparent heir without a previous charge; action does not lie even upon theſe, within the year, if the heir cannot make the proper defences without incurring a paſſive title. But judicial ſales, commenced againſt an anceſtor, may by ſpecial act of ſederunt be continued upon a citation of the heir, without waiting the year of deliberating. This *annus deliberandi* is computed, in the caſe of a poſthumous heir, from the birth of ſuch heir. An apparent heir, who, by immixing with the eſtate of his anceſtor, is as much ſubjected to his debts as if he had entered, can have no longer a right to deliberate whether he will enter or not.

Service of heirs,

24. All ſervices proceed on brieves from the chancery, which are called *brieves of inqueſt*, and have been long known in Scotland. The judge, to whom the brief is directed, is required to try the matter by an inqueſt of 15 ſworn men. The inqueſt, if they find the claim verified, muſt declare the claimant heir to the deceaſed, by a verdict or ſervice, which the judge muſt atteſt, and return the brief, with the ſervice proceeding on it, to the chancery; from which an extract is obtained called the *retour of the ſervice.*

general and ſpecial.

25. The ſervice of heirs is either *general* or *ſpecial.* A *general* ſervice veſts the heir in the right of all heritable ſubjects, which either do not require ſeiſin or which have not been perfected by ſeiſin in the perſon of the anceſtor. A public right, therefore, according to the feudal law, though followed by ſeiſin, having no legal effects till it be confirmed by the ſuperior, muſt, as a perſonal right, be carried by a general ſervice. A *ſpecial* ſervice, followed by ſeiſin, veſts the heir in the right of the ſpecial ſubjects in which the anceſtor died infeſt.

Entry by inventory.

26. If an heir, doubtful whether the eſtate of his anceſtor be ſufficient for clearing his debts, ſhall, at any time within the *annus deliberandi*, exhibit upon oath a full inventory of all his anceſtor's heritable ſubjects, to the clerk of the ſhire where the lands lie; or, if there is no heritage, requiring ſeiſin, to the clerk of the ſhire where he died; and if, after the ſame is ſubſcribed by the ſheriff or ſheriff-depute, the clerk, and himſelf, and regiſtered in the ſheriff's books, the extract thereof ſhall be regiſtered within forty days after expiry of the *annus deliberandi* in the general regiſter appointed for that purpoſe, his ſubſequent entry will ſubject him no farther than to the value of ſuch inventory. If the inventory be given up and regiſtered within the time preſcribed, the heir may ſerve on it, even after the year.

27. Creditors are not obliged to acquieſce in the value of the eſtate given up by the heir; but, if they be real creditors, may bring the eſtate to a public ſale, in order to diſcover its true value; ſince an eſtate is always worth what can be got for it. An heir by inventory, as he is in effect a truſtee for the creditors, muſt account for that value to which the eſtate may have been improved ſince the death of the anceſtor, and he muſt communicate to all the creditors the eaſes he has got in tranſacting with any one of them.

Entry upon a precept of *clare conſtat.*

28. Practice has introduced an anomalous ſort of entry, without the interpoſition of an inqueſt, by the ſole conſent of the ſuperior; who, if he be ſatisfied that the perſon applying to him is the next heir, grants him a perſon (called of *clare conſtat*, from the firſt words of its recital), commanding his bailie to infeſt him in the ſubjects that belonged to his anceſtor. The heir, by taking ſeiſin on this precept, becomes *paſſive*, liable for all the debts of his anceſtor; and on the other hand, acquires an active title, as to the ſubjects contained in the precept in queſtions with the ſuperior or his heirs; and they may, when followed by ſeiſin, afford a title of preſcription: But as no perſon can be declared an heir by private authority, they cannot bar the true heir from entering after 20 years, as a legal entry would have done; the true heir, in ſuch caſe, having it ſtill in his power to ſet aſide that right, and obtain himſelf regularly ſerved at any time within the years of preſcription. Of the ſame nature is the entry by haſp and ſtaple, commonly uſed in burgage tenements of houſes; by which the bailie, without calling an inqueſt, cognoſces or declares a perſon heir, upon evidence brought before himſelf; and, at the ſame time infeſts him in the ſubject, by the ſymbol of the haſp and ſtaple of the door. Charges given by creditors to apparent heirs to enter, ſtand in the place of an actual entry, ſo as to ſupport the creditor's diligence (clxxii. 2.).

Entry by haſp and ſtaple.

A ſpecial ſervice includes a general one.

29. A general ſervice cannot include a ſpecial one; ſince it has no relation to any ſpecial ſubject, and carries only that claſs of rights on which ſeiſin has not proceeded; but a ſpecial ſervice implies a general one of the ſame kind or character, and conſequently carries even ſuch rights as have not been perfected by ſeiſin. Service is not required to eſtabliſh the heir's right in titles of honour, or offices of the higheſt dignity; for theſe deſcend *jure ſanguinis.*

Paſſive titles.

30. An heir, by immixing with his anceſtor's eſtate without entry, ſubjects himſelf to his debts, as if he had entered; or, in the law-phraſe, incurs a paſſive title. The only paſſive title by which an apparent heir becomes liable univerſally for all his anceſtor's debts, is *geſtio pro hærede*, or his behaving as none but an heir has right to do. Behaviour as heir is inferred from the apparent heir's intromiſſion, after the death of the anceſtor, with any part of the lands or other heritable ſubjects belonging to the deceaſed, to which he himſelf might have completed an active title by entry.

Geſtio pro hærede.

31. This paſſive title is excluded, if the heir's intromiſſion be by order of law; or if it be founded on

ſingular titles, and not as heir to the deceaſed. But an apparent heir's purchaſing any right to his anceſtor's eſtate, otherwiſe than at public roup (auction), or his poſſeſſing it in virtue of rights ſettled in the perſon of any near relation of the anceſtor, to whom he himſelf may ſucceed as heir, otherwiſe than upon purchaſe by public ſale, is deemed behaviour as heir.

32. Behaviour as heir is alſo excluded, where the intromiſſion is ſmall, unleſs an intention to defraud the anceſtor's creditors be preſumable from the circumſtances attending it. Neither is behaviour inferred againſt the apparent heir, from the payment of his anceſtor's debt, which is a voluntary act, and profitable to the creditors: nor by his taking out of brieves to ſerve; for one may alter his purpoſe, while it is not completed: nor by his aſſuming the titles of honour belonging to his anceſtor, or exerciſing an honorary office hereditary in the family; for theſe are rights annexed to the blood, which may be uſed without proper repreſentation. But the exerciſing an heritable office of profit, which may paſs by voluntary conveyance, and conſequently is adjudgeable, may reaſonably be thought to infer a paſſive title. Laſtly, as paſſive titles have been introduced, merely for the ſecurity of creditors; therefore, where queſtions concerning behaviour ariſe among the different orders of heirs, they are liable to one another no farther than *in valorem* of their ſeveral intromiſſions.

Præceptio hæreditatis.

33. Another paſſive title in heritage, may be incurred by the apparent heir's accepting a gratuitous right from the anceſtor, to any part of the eſtate to which he himſelf might have ſucceeded as heir; and it is called *præceptio hereditatis*, becauſe it is a taking of the ſucceſſion by the heir before it opens to him by the death of his anceſtor. If the right be onerous, there is no paſſive title; if the conſideration paid for it does not amount to its full value, the creditors of the deceaſed may reduce it, in ſo far as it is gratuitous, but ſtill it infers no paſſive title.

34. The heir incurring this paſſive title is no farther liable, than if he had at the time of his acceptance entered heir to the granter, and ſo ſubjected himſelf to the debts that were then chargeable againſt him; but with the poſterior debts he has nothing to do, not even with thoſe contracted between the date of the right and the infeftment taken upon it, and he is therefore called *ſucceſſor titulo lucrativo poſt contractum debitum*.

35. Neither of theſe paſſive titles takes place, unleſs the ſubject intermeddled with or diſponed be ſuch as the intromitter or receiver would ſucceed to as heir. In this alſo, theſe two paſſive titles agree, that the intromiſſion in both muſt be after the death of the anceſtor; for there can be no *termini habiles* of a paſſive title, while the anceſtor is alive. But in the following reſpect they differ: *Geſtio pro herede*, being a vicious paſſive title founded upon a quaſi delict, cannot be objected againſt the delinquent's heir, if proceſs has not been litiſconteſted while the delinquent himſelf was alive; whereas the *ſucceſſor titulo lucrativo* is by the acceptance of the diſpoſition underſtood to have entered into a tacit contract with the granter's creditors, by which he undertakes the burden of their debts; and all actions founded on contract are tranſmiſſible againſt heirs.

Other paſſive titles.

36. An apparent heir, who is cited by the anceſtor's creditor in a proceſs for payment, if he offers any peremptory defence againſt the debt, incurs a paſſive title; for he can have no intereſt to object againſt it, but in the character of heir. In the ſame manner, the heir's not renouncing upon a charge to enter heir, infers it: But the effect of both theſe is limited to the ſpecial debt purſued for, or charged upon. This paſſive title, which is inferred from the heir's not renouncing, has no effect till decree paſs againſt him; and even a renunciation offered after decree, if the decree be in abſence, will intitle the heir to a ſuſpenſion of all diligence againſt his perſon and eſtate, competent upon his anceſtor's debts.

37. By the principles of the feudal law, an heir, when he is to complete his titles by ſpecial ſervice, muſt neceſſarily paſs over his immediate anceſtor, *e. g.* his father, if he was not infeſt; and ſerve heir to that anceſtor who was laſt veſt and ſeiſed in the right, and in whoſe *hæreditas jacens* the right muſt remain, till a title be connected thereto from him. As this bore hard upon creditors who might think themſelves ſecure in contracting with a perſon whom they ſaw for ſome time in the poſſeſſion of an eſtate, and from thence concluded that it was legally veſted in him; it is therefore provided by act 1695, that every perſon, paſſing over his immediate anceſtor who had been three years in poſſeſſion, and ſerving heir to one more remote, ſhall be liable for the debts and deeds of the perſon interjected, to the value of the eſtate to which he is ſerved. This being correctory of the feudal maxims, has been ſtrictly interpreted, ſo as not to extend to the gratuitous deeds of the perſon interjected, nor to the caſe where the interjected perſon was a naked fiar, and poſſeſſed only civilly through the liferenter.

Reduction by the heir *ex capite lecti.*

38. The law, from its jealouſy of the weakneſs of mankind while under ſickneſs, and of the importunity of friends on that occaſion, has declared that all deeds affecting heritage, if they be granted by a perſon on deathbed, (*i. e.* after contracting that ſickneſs which ends in death), to the damage of the heir, are ineffectual, except where the debts of the granter have laid him under a neceſſity to alien his lands. As this law of deathbed is founded ſolely in the privilege of the heir, deathbed-deeds, when conſented to by the heir, are not reducible. The term properly oppoſed to deathbed is *liege pouſtie*, by which is underſtood a ſtate of health; and it gets the name, becauſe perſons in health have the *legitima poteſtas*, or lawful power, of diſpoſing of their property at pleaſure.

What conſtitutes a deathbed deed.

36. The two extremes being proved, of the granter's ſickneſs immediately before ſigning, and of his death following it, though at the greateſt diſtance of time, did, by the former law, found a preſumption that the deed was granted on deathbed, which could not have been elided but by a poſitive proof of the granter's convaleſcence; but now the allegation of deathbed is alſo excluded, by his having lived 60 days after ſigning the deed. The legal evidence of convaleſcence is the granter's having been, after the date of the deed, at kirk OR market unſupported, for a proof of either will ſecure the deed from challenge. The going to kirk or market muſt be performed when the people are met together in the church or churchyard for any public meeting, civil or eccleſiaſtical, or in the mar-

kept-place at the time of public market. No other proof of convaleſcence is receivable, becauſe at kirk and market there are always preſent unſuſpected witneſſes, which we can hardly be ſure of in any other caſe.

To what heirs this reduction is competent.

40. The privilege of ſetting aſide deeds *ex capite lecti*, is competent to all heirs, not to heirs of line only, but of conqueſt, tailzie, or proviſion; not only to the immediate, but to remoter heirs as ſoon as the ſucceſſion opens to them. But, where it is conſented to or ratified by the immediate heir, it is ſecured againſt all challenge, even from the remoter. Yet the immediate heir cannot, by any antecedent writing, renounce his right of reduction, and thereby give ſtrength to deeds that may be afterwards granted *in lecto* to his hurt; for no private renunciation can authoriſe a perſon to act contrary to a public law; and ſuch renunciation is preſumed to be extorted through the fear of exheredation. If the heir ſhould not uſe this privilege of reduction, his creditor may, by adjudication, transfer it to himſelf; or he may, without adjudication reduce the deed, libelling upon his intereſt as creditor to the heir: But the granter's creditors have no right to this privilege, in regard that the law of deathbed was introduced, not in behalf of the granter himſelf, but of his heir.

What rights may be thus ſet aſide.

41. The law of deathbed ſtrikes againſt diſpoſitions of every ſubject to which the heir would have ſucceeded, or from which he would have had any benefit, had it not been ſo diſponed. Deathbed-deeds granted in conſequence of a full or proper obligation in *liege pouſtie*, are not ſubject to reduction; but, where the antecedent obligation is merely natural, they are reducible. By ſtronger reaſon, the deceaſed cannot, by a deed merely voluntary, alter the nature of his eſtate on deathbed to the prejudice of his heir, ſo as for heritable to make it moveable; but if he ſhould, in *liege pouſtie*, exclude his apparent heir, by an irrevocable deed containing reſerved faculties, the heir cannot be heard to quarrel the exerciſe of theſe faculties on death-bed.

24. In a competition between the creditors of the deceaſed and of the heir, the law (act 1661) has juſtly preferred the creditors of the deceaſed, as every man's eſtate ought to be liable, in the firſt place, for his own debt. But this preference is, by the ſtatute, limited to the caſe where the creditors of the deceaſed have uſed diligence againſt their debtor's eſtate, within three years from his death; and therefore the heir's creditors may, after that period, affect it for their own payment. All diſpoſitions by an heir, of the anceſtor's eſtate, within a year after his death, are null, in ſo far as they are hurtful to the creditors of the anceſtor. This takes place, though theſe creditors ſhould have uſed no diligence, and even where the diſpoſitions are granted after the year: It is thought they are ineffectual againſt the creditors of the deceaſed who have uſed diligence within the three years.

clxxi.

SECT. XXI. *Of Succeſſion in Moveables.*

Moveable ſucceſſion by law.

In the ſucceſſion of moveable rights, it is an univerſal rule, that the next in degree to the deceaſed (or next of kin) ſucceeds to the whole; and if there are two or more equally near, all of them ſucceed by equal parts, without that prerogative, which takes place in heritage, of the eldeſt ſon over the younger, or of males over females. Neither does the right of repreſentation (explained n° clxxx. 4.) obtain in the ſucceſſion of moveables, except in the ſingle caſe of a competition between the full blood and the half blood; for a niece by the full blood will be preferred before a brother by the half blood, though ſhe is by one degree more remote from the deceaſed than her uncle. Where the eſtate of a perſon deceaſed conſiſts partly of heritage, and partly of moveables, the heir in the heritage has no ſhare of the moveables, if there are others as near in degree to the deceaſed as himſelf: But where the heir, in ſuch caſe, finds it his intereſt to renounce his excluſive claim to the heritage, and betake himſelf to his right as one of the next of kin, he may collate or communicate the heritage with the others, who in their turn muſt collate the moveables with him; ſo that the whole is thrown into one maſs, and divided equally among all of them. This doctrine holds, not only in the line of deſcendants, but of collaterals; for it was introduced, that the heir might in no caſe be worſe than the other next of kin.

Succeſſion in moveables by deſtination.

2. One may ſettle his moveable eſtate upon whom he pleaſes, excluding the legal ſucceſſor, by a teſtament; which is a written declaration of what a perſon wills to be done with his moveable eſtate after his death. No teſtamentary deed is effectual till the death of the teſtator; who may therefore revoke it at pleaſure, or make a new one, by which the firſt loſes its force, according to the rule, *voluntas teſtatoris eſt ambulatoria uſque ad mortem*; and hence teſtaments are called *laſt* or *latter wills*. Teſtaments, in their ſtrict acceptation, muſt contain a nomination of executors, *i. e.* of perſons appointed to adminiſter the ſucceſſion according to the will of the deceaſed: Yet nothing hinders one from making a ſettlement of moveables, in favour of an univerſal legatee, though he ſhould not have appointed executors; and on the other part, a teſtament where executors are appointed is valid, though the perſon who is to have the right of ſucceſſion ſhould not be named. In this laſt caſe, if the executor nominated be a ſtranger, *i. e.* one who has no legal intereſt in the moveable eſtate, he is merely a truſtee, accountable to the next of kin; but he may retain a third of the dead's part (explained par. 6.) for his trouble in executing the teſtament; in payment of which, legacies, if any be left to him, muſt be imputed. The heir, if he be named executor, has right to the third as a ſtranger; but if one be named who has an intereſt in the legal ſucceſſion, he has no allowance, unleſs ſuch intereſt be leſs than a third. Nuncupative or verbal teſtaments are not, by the law of Scotland, effectual for ſupporting the nomination of an executor, let the ſubject of the ſucceſſion be ever ſo ſmall: But verbal legacies, not exceeding L. 100 *Scots*, are ſuſtained; and even where they are granted for more, they are ineffectual only as to the exceſs.

Legacy.

3. A legacy is a donation by the deceaſed, to be paid by the executor to the legatee. It may be granted either in the teſtament or in a ſeparate writing. Legacies are not due till the granter's death; and conſequently they can tranſmit no right to the executors of the legatee, in the event that the granter ſurvives him. A caſe occurred ſome years ago, where a teſtator left a legacy *payable when* the legatee arrived at a certain age. The legatee ſurvived the teſtator,

tor, but died before the legacy was payable. It was found, chiefly upon the authority of the Roman law, that the legacy veſted in the legatee *a morte teſtatoris*, and upon his deceaſe was due to the legatee's next of kin.

4. Legacies, where they are general, *i. e.* of a certain ſum of money indefinitely, give the legatee no right in any one debt or ſubject; he can only inſiſt in a perſonal action againſt the executor, for payment out of the teſtator's effects. A ſpecial legacy, *i. e.* of a particular debt due to the deceaſed, or of a particular ſubject belonging to him, is of the nature of an aſſignation, by which the property of the ſpecial debt or ſubject veſts, upon the teſtator's death in the legatee, who can therefore directly ſue the debtor or poſſeſſor: Yet as no legacy can be claimed till the debts are paid, the executor muſt be cited in ſuch proceſs, that it may be known, whether there are free effects ſufficient for anſwering the legacy. Where there is not enough for payment of all the legacies, each of the general legatees muſt ſuffer a proportional abatement: But a ſpecial legatee gets his legacy entire, though there ſhould be nothing over for payment of the reſt; and, on the contrary, he has no claim, if the debt or ſubject bequeathed ſhould periſh, whatever the extent of the free executry may be.

Who can teſt, and under what reſtrictions

5. Minors, after puberty, can teſt without their curators, wives without their huſbands, and perſons interdicted without their interdictors: but baſtards cannot teſt, except in the caſes afterwards ſet forth N° clxxxii. 3. As a certain ſhare of the goods, falling under the communion that is conſequent on marriage, belongs, upon the huſband's deceaſe, to his widow, *jure relictæ*, and a certain ſhare to the children, called the *legitime*, *portion-natural*, or *bairns part of gear;* one who has a wife or children, though he be the abſolute adminiſtrator of all theſe goods during his life, and conſequently may alien them by a deed *inter vivos*, in *liege pouſtie*, even gratuitouſly, if no fraudulent intention to diſappoint the wife or children ſhall appear, yet cannot impair their ſhares gratuitouſly on death-bed; nor can he diſpoſe of his moveables to their prejudice by teſtament, though it ſhould be made in *liege pouſtie;* ſince teſtaments do not operate till the death of the teſtator, at which period the diviſion of the goods in communion have their full effect in favour of the widow and children

Diviſion of a teſtament

6. If a perſon deceaſed leaves a widow, but no child, his teſtament, or, in other words, the goods in communion, divide in two: one half goes to the widow; the other is the dead's part, *i. e.* the abſolute property of the deceaſed, on which he can teſt, and which falls to his next of kin, if he dies inteſtate. Where he leaves children, one or more, but no widow, the children get one half as their legitime: the other half is the dead's part; which falls alſo to the children, if the father has not teſted upon it. If he leaves both widow and children, the diviſion is tripartite: the wife takes one third by herſelf; another falls, as legitime, to the children equally among them, or even to an only child, though he ſhould ſucceed to the heritage; the remaining third is the dead's part. Where the wife predeceaſes without children, one half is retained by the huſband, the other falls to her next of kin: Where ſhe leaves children, the diviſion ought alſo to be bipartite, by the common rules of ſociety, ſince no legitime is truly due on a mother's death: yet it is in practice tripartite; two thirds remain with the ſurviving father, as if one third were due to him *proprio nomine*, and another as adminiſtrator of the legitime for his children; the remaining third, being the wife's ſhare, goes to her children, whether of that or any former marriage; for they are all equally her next of kin.

What debts affect the executry.

7. Before a teſtament can be divided, the debts owing by the deceaſed are to be deducted; for all executry muſt be free. As the huſband has the full power of burdening the goods in communion, his debts affect the whole, and ſo leſſen the legitime and the ſhare of the relict, as well as the dead's part. His funeral charges, and the mournings and alimony due to the widow, are conſidered as his proper debts; but the legacies, or other gratuitous rights granted by him on death-bed, affect only the dead's part. Bonds bearing intereſt, due by the deceaſed, cannot diminiſh the relict's ſhare, becauſe ſuch bonds, when due to the deceaſed, do not increaſe it. The funeral charges of the wife predeceaſing, fall wholly on her executors who have right to her ſhare. Where the deceaſed leaves no family, neither huſband, wife, nor child, the teſtament ſuffers no diviſion, but all is the dead's part.

8. The whole iſſue of the huſband, not only by that marriage which was diſſolved by his death, but by any former marriage, has an equal intereſt in the legitime; otherwiſe the children of the firſt marriage would be cut out, as they could not claim the legitime during their father's life. But no legitime is due, (1.) Upon the death of a mother. (2.) Neither is it due to grandchildren, upon the death of a grandfather. Nor, (3.) To children foriſfamiliated. *i. e.* to ſuch as, by having renounced the legitime, are no longer conſidered as *in familia*, and ſo are excluded from any farther ſhare of the moveable eſtate than they have already received.

Renunciation of the legitime.

9. As the right of legitime is ſtrongly founded in nature, the renunciation of it is not to be inferred by implication. Renunciation by a child of his claim of legitime has the ſame effect as his death, in favour of the other children intitled thereto; and conſequently the ſhare of the renouncer divides among the reſt; but he does not thereby loſe his right to the dead's part, if he does not alſo renounce his ſhare in the father's executry. Nay, his renunciation of the legitime, where he is the only younger child, has the effect to convert the whole ſubject thereof into dead's part, which will therefore fall to the renouncer himſelf as next of kin, if the heir be not willing to collate the heritage with him. Yet it has been found that the renunciation of the only younger child made the whole legitime accrue to the heir without collation.

Collation among younger children.

10. For preſerving an equality among all the children who continue intitled to the legitime, we have adopted the Roman doctrine of *collatio bonorum;* whereby the child, who has got a proviſion from his father, is obliged to collate it with the others, and impute it towards his own ſhare of the legitime; but if from the deed of proviſion, the father ſhall appear to have intended it as a *præcipuum* to the child, collation is excluded. A child is not bound to collate an heritable ſubject provided to him, becauſe the legitime is not impaired by ſuch proviſion. As this collation takes place only in queſtions among children who are intitled to

the legitime, the relict is not bound to collate donations given her by her huſband, in order to increaſe the legitime; and on the other part, the children are not obliged to collate their proviſions, in order to increaſe her ſhare.

Confirmation.

11. As an heir in heritage muſt complete his titles by entry, ſo an executor is not veſted in the right of the moveable eſtate of the deceaſed without confirmation. Confirmation is a ſentence of the commiſſary or biſhop's court, impowering an executor, one or more, upon making inventory of the moveables pertaining to the deceaſed, to recover, poſſeſs, and adminiſter them, either in behalf of themſelves, or of others intereſted therein. Teſtaments muſt be confirmed in the commiſſariot where the deceaſed had his principal dwelling houſe at his death. If he had no fixed reſidence, or died in a foreign country, the confirmation muſt be at *Edinburgh*, as the *commune forum*; but if he went abroad with an intention to return, the commiſſariot within which he reſided before he left Scotland, is the only proper court.

12. Confirmation proceeds upon an edict, which is affixed on the door of the pariſh-church where the deceaſed dwelt, and ſerves to intimate to all concerned the day of confirmation, which muſt be nine days at leaſt after publiſhing the edict. In a competition for the office of executor, the commiſſary prefers, *primo loco*, the perſon named to it by the deceaſed himſelf, whoſe nomination he ratifies or confirms, without any previous decerniture: this is called the confirmation of a teſtament-teſtamentary. In default of an executor named by the deceaſed, univerſal diſponees are by the preſent practice preferred; after them, the next of kin; then the relict; then creditors; and, laſtly, ſpecial legatees. All theſe muſt be decerned executors, by a ſentence called a *decree-dative*; and if afterwards they incline to confirm, the commiſſary authoriſes them to adminiſter, upon their making inventory, and giving ſecurity to make the ſubject thereof forthcoming to all having intereſt; which is called the confirmation of a teſtament-dative.

Confirmation *qua* executor-creditor.

13. A creditor, whoſe debtor's teſtament is already confirmed, may ſue the executor, who holds the office for all concerned, to make payment of his debt. Where there is no confirmation, he himſelf may apply for the office, and confirm as executor-creditor; which intitles him to ſue for and receive the ſubject confirmed, for his own payment: and where one applies for a confirmation as executor-creditor, every co-creditor may apply to be conjoined with him in the office. As this kind of confirmation is ſimply a form of diligence, creditors are exempted from the neceſſity of confirming more than the amount of their debts.

14. A creditor whoſe debt has not been conſtituted or his claim not cloſed by decree, during the life of his debtor, has no title to demand directly the office of executor *qua* creditor: but he may charge the next of kin who ſtands off, to confirm, who muſt either renounce within twenty days after the charge, or be liable for the debt; and if the next of kin renounces, the purſuer may conſtitute his debt, and obtain a decree *cognitionis cauſa*, againſt the *hæreditas jacens* of the moveables, upon which he may confirm as executor-creditor to the deceaſed. Where one is creditor, not to the deceaſed, but to his next of kin who ſtands off from confirming, he may affect the moveables of the deceaſed, by obtaining himſelf decerned executor-dative to the deceaſed, as if he were creditor to him, and not to his next of kin.

Confirmation *ad omiſſa*, &c.

15. Where an executor has either omitted to give up any of the effects belonging to the deceaſed in inventory, or has eſtimated them below their juſt value, there is place for a new confirmation, *ad omiſſa, vel male appretiata*, at the ſuit of any having intereſt; and if it appears that he has not omitted or undervalued any ſubject *doloſé*, the commiſſary will ordain the ſubjects omitted, or the difference between the eſtimations in the principal teſtament and the true values, to be added thereto; but if dole ſhall be preſumed, the whole ſubject of the teſtament *ad omiſſa vel male appretiata*, will be carried to him who confirms it, to the excluſion of the executor in the principal teſtament.

Legitime, &c. tranſmit without confirmation.

16. The legitime and relict's ſhare, becauſe they are rights ariſing *ex lege*, operate *ipſo jure*, upon the father's death, in favour of the relict and children; and conſequently paſs from them, though they ſhould die before confirmation, to their next of kin: whereas the dead's part, which falls to the children or other next of kin in the way of ſucceſſion, remains, if they ſhould die before confirming, *in bonis* of the firſt deceaſed; and ſo does not deſcend to their next of kin, but may be confirmed by the perſon who, at the time of confirmation, is the next of kin to the firſt deceaſed. Special aſſignations, though neither intimated nor made public during the life of the granter, carry to the aſſignee the full right of the ſubjects aſſigned, without confirmation. Special legacies are really aſſignations, and ſo fall under this rule. The next of kin, by the bare poſſeſſion of the *ipſa corpora* of moveables, acquires the property thereof without confirmation, and tranſmits it to his executors.

Partial confirmation.

17. The confirmation of any one ſubject by the next of kin, as it proves his right of blood, has been adjudged to carry the whole executry out of the teſtament of the deceaſed, even what was omitted, and to tranſmit all to his own executors. The confirmation of a ſtranger, who is executor nominated, as it is merely a truſt for the next of kin, has the effect to eſtabliſh the right of the next of kin to the ſubjects confirmed, in the ſame manner as if himſelf had confirmed them.

Executors, how far liable.

18. Executry, though it carries a certain degree of repreſentation of the deceaſed, is properly an office: executors therefore are not ſubjected to the debts due by the deceaſed, beyond the value of the inventory; but, at the ſame time, they are liable in diligence for making the inventory effectual to all having intereſt. An executor-creditor who confirms more than his debt amounts to, is liable in diligence for what he confirms. Executors are not liable in intereſt, even upon ſuch bonds recovered by them as carried intereſt to the deceaſed, becauſe their office obliges them to retain the ſums they have made effectual, in order to a diſtribution thereof among all having intereſt. This holds though they ſhould again lend out the money upon intereſt, as they do it at their own riſk.

In what caſes they may pay without ſentence.

19. There are certain debts of the deceaſed called privileged debts, which were always preferable to every other. Under that name are comprehended, medicines furniſhed to the deceaſed on deathbed, phyſicians fees

during that period, funeral charges, and the rent of his houſe, and his ſervants wages for the year or term current at his death. Theſe the executors are in ſafety to pay on demand. All the other creditors, who either obtain themſelves confirmed, or who cite the executor already confirmed, within ſix months after their debtor's death, are preferred, *pari paſſu*, with thoſe who have done more timely diligence; and therefore no executor can either retain for his own debt, or pay a teſtamentary debt, ſo as to exclude any creditor, who ſhall uſe diligence within the ſix months, from the benefit of the *pari paſſu* preference; neither can a decree for payment of debt be obtained, in that period, againſt an executor, becauſe, till that term be elapſed, it cannot be known how many creditors may be intitled to the fund in his hands. If no diligence be uſed within the ſix months, the executor may retain for his own debt, and pay the reſidue *primo venienti*. Such creditors of the deceaſed as have uſed diligence within a year after their debtor's death, are preferable on the ſubject of his teſtament to the creditors of his next of kin.

Vitious intromiſſion.

20. The only paſſive title in moveables is vitious intromiſſion; which may be defined, an unwarrantable intermeddling with the moveable eſtate of a perſon deceaſed, without the order of law. This is not confined, as the paſſive titles in heritage are, to the perſons intereſted in the ſucceſſion, but ſtrikes againſt all intromitters whatever. Where an executor confirmed intromits with more than he has confirmed, he incurs a paſſive title; fraud being in the common caſe preſumed from his not giving up in inventory the full ſubject intermeddled with. Vitious intromiſſion is alſo preſumed, where the repoſitories of a dying perſon are not ſealed up, as ſoon as he becomes incapable of ſenſe, by his neareſt relations; or, if he dies in a houſe not his own, they muſt be ſealed by the maſter of ſuch houſe, and the keys delivered to the judge-ordinary, to be kept by him, for the benefit of all having intereſt.

21. The paſſive title of vitious intromiſſion does not take place where there is any probable title or circumſtance that takes off the preſumption of fraud. In conſequence of this rule, neceſſary intromiſſion, or *cuſtodiæ cauſa*, by the wife or children, who only continue the poſſeſſion of the deceaſed, in order to preſerve his goods for the benefit of all concerned, infers no paſſive title. And, upon the ſame principle, an intromitter, by confirming himſelf executor, and thereby ſubjecting himſelf to account, before action be brought againſt him on the paſſive titles, purges the vitioſity of his prior intromiſſion: and where the intromitter is one who is intereſted in the ſucceſſion, *e. g.* next of kin, his confirmation, at any time within a year from the death of the deceaſed, will exclude the paſſive title, notwithſtanding a prior citation. As this paſſive title was intended only for the ſecurity of creditors, it cannot be ſued upon by legatees; and ſince it ariſes *ex delicto*, it cannot be pleaded againſt the heir of the intromitter. As in delicts, any one of many delinquents may be ſubjected to the whole puniſhment, ſo any one of many intromitters may be ſued *in ſolidum* for the purſuer's debt, without calling the reſt; but the intromitter who pays has an action of relief againſt the others for their ſhare of it. If the intromitters are ſued jointly, they are liable, not *pro rata* of their ſeveral intromiſſions, but *pro virili*.

Mutual relief betwixt the heir and executor.

28. The whole of a debtor's eſtate is ſubjected to the payment of his debts; and therefore, both his heirs and executors are liable for them, in a queſtion with creditors: but as ſucceſſion is by law divided into the heritable and the moveable eſtate, each of theſe ought, in a queſtion between the ſeveral ſucceſſors, to bear the burdens which naturally affect it. Action of relief is accordingly competent to the heir who has paid a moveable debt, againſt the executor; and *vice verſa*. This relief is not cut off by the deceaſed's having diſponed either his land-eſtate or his moveables, with the burden of his *whole* debts; for ſuch burden is not to be conſtrued as an alteration of the legal ſucceſſion, but merely as a farther ſecurity to creditors, unleſs the contrary ſhall be preſumed from the ſpecial ſtyle of the diſpoſition.

IV. OF LAST HEIRS AND BASTARDS.

clxxxii.

Where there is no heir, the king ſucceeds.

By the ancient practice, feudal grants taken to the vaſſal, and to a ſpecial order of heirs, without ſettling the laſt termination upon *heirs whatſoever*, returned to the ſuperior, upon failure of the ſpecial heirs therein contained: but now that feus are become patrimonial rights, the ſuperior is, by the general opinion, held to be fully diveſted by ſuch grant, and the right deſcends to the vaſſal's heirs at law. And even where a vaſſal dies without leaving any heir who can prove the remoteſt propinquity to him, it is not the ſuperior, as the old law ſtood, but the king, who ſucceeds as laſt heir, both in the heritable and moveable eſtate of the deceaſed, in conſequence of the rule, *Quod nullius eſt, cedit domino Regi*.

2. If the lands, to which the king ſucceeds, be holden immediately of himſelf, the property is conſolidated with the ſuperiority, as if reſignation had been made in the ſovereign's hands. If they are holden of a ſubject, the king, who cannot be vaſſal to his own ſubject, names a donatory; who, to complete his title, muſt obtain a decree of declarator; and thereafter he is preſented to the ſuperior, by letters of preſentation from the king under the quarter-ſeal, in which the ſuperior is charged to enter the donatory. The whole eſtate of the deceaſed is, in this caſe, ſubjected to his debts, and to the widow's legal proviſions. Neither the king nor his donatory is liable beyond the value of the ſucceſſion. A perſon who has no heir to ſucceed to him, cannot alien his heritage *in lecto*, to the prejudice of the king, who is intitled to ſet aſide ſuch deed, in the character of *ultimus heres*.

King ſucceeds as *ultimus hæres* to the baſtard.

3. A baſtard can have no legal heirs, except thoſe of his own body; ſince there is no ſucceſſion but by the father, and a baſtard has no certain father. The king therefore ſucceeds to him, failing his lawful iſſue, as laſt heir. Though the baſtard, as abſolute proprietor of his own eſtate, can diſpoſe of his heritage in *liege pouſtie*, and of his moveables by any deed *inter vivos*; yet he is diſabled, *ex defectu natalium*, from bequeathing by teſtament, without letters of legitimation from the ſovereign. If the baſtard has lawful children, he may teſt without ſuch letters, and name tutors and curators to his iſſue. Letters of legitimation, let their clauſes be ever ſo ſtrong, cannot enable the

baſtard to ſucceed to his natural father, to the excluſion of lawful heirs.

Baſtards incapable of legal, but not of deſtined, ſucceſſion.

4. The legal rights of ſucceſſion, being founded in marriage, can be claimed only by thoſe who are born in lawful marriage; the iſſue therefore of an unlawful marriage are incapable of ſucceſſion. A baſtard is excluded, (1.) From his father's ſucceſſion; becauſe law knows no father who is not marked out by marriage. (2.) From all heritable ſucceſſion, whether by the father or mother; becauſe he cannot be pronounced lawful heir by the inqueſt, in terms of the brief. And, (3.) From the moveable ſucceſſion of his mother; for though the mother be known, the baſtard is not her lawful child, and legitimacy is implied in all ſucceſſion conferred by law. A baſtard, though he cannot ſucceed *jure ſanguinis*, may ſucceed by deſtination, where he is ſpecially called to the ſucceſſion by an entail or teſtament.

Aliens cannot ſucceed in feudal rights;

nor Papiſts.

5. Certain perſons, though born in lawful marriage, are incapable of ſucceſſion. Aliens are, from their allegiance to a foreign prince, incapable of ſucceeding in *feudal rights*, without naturalization. Children born in a foreign ſtate, whoſe fathers were natural born ſubjects, and not attainted, are held to be natural born ſubjects. Perſons educated in, or profeſſing, the Popiſh religion, if they ſhall neglect, upon their attaining the age of 15, to renounce its doctrines by a ſigned declaration, cannot ſucceed in *heritage*; but muſt give place to the next Proteſtant heir, who will hold the eſtate irredeemably, if the Popiſh heir does not, within ten years after incurring the irritancy, ſign the *formula* preſcribed by the ſtatute 1700, c. 3.

CHAP. III.

Of ACTIONS.

HITHERTO of *Perſons* and *Rights*, the two firſt objects of law: *Actions* are its third object, whereby perſons make their rights effectual.

clxxxiii.

SECT. I. *Nature, diviſion, &c. of actions.*

An action, what.

AN action may be defined, A demand regularly made and inſiſted in, before the judge-competent, for the attaining or recovering of a right; and it ſuffers ſeveral diviſions, according to the different natures of the rights purſued upon.

Diviſion of actions.

2. Actions are either real or perſonal. A real action is that which ariſes from a right in the thing itſelf, and which therefore may be directed againſt all poſſeſſors of that thing: thus, an action for the recovery, even of a moveable ſubject, when founded on a *jus in re*, is in the proper acceptation real; but real actions are, in vulgar ſpeech, confined to ſuch as are directed againſt heritable ſubjects. A perſonal action is founded only on an obligation undertaken for the performance of ſome fact, or the delivery of ſome ſubject; and therefore can be carried on againſt no other than the perſon obliged, or his heirs.

Reduction-improbation.

3. Actions, again, are either ordinary or reſciſſory. All actions are, in the ſenſe of this diviſion, ordinary, which are not reſciſſory. Reſciſſory actions are divided, (1.) Into actions of proper improbation. (2.) Actions of reduction improbation. (3.) Actions of ſimple reduction. Proper improbations, which are brought for declaring writings falſe or forged, are noticed below, N° clxxxvi. 32. Reduction-improbation is an action, whereby a perſon who may be hurt or affected by a writing, inſiſts for producing or exhibiting it in court, in order to have it ſet aſide, or its effect aſcertained, under the certification that the writing, if not produced, ſhall be declared falſe and forged. This certification is a fiction of law, introduced that the production of writings may be the more effectually forced, and therefore it operates only in favour of the purſuer. Becauſe the ſummons in this action proceeds on alleged grounds of falſehood, his majeſty's advocate, who is the public proſecutor of crimes, muſt concur in it.

4. As the certification in this proceſs draws after it ſo heavy conſequences, two terms are aſſigned to the defenders for production. After the ſecond term is elapſed, intimation muſt be made judicially to the defender, to ſatisfy the production within ten days; and till theſe are expired, no certification can be pronounced. Certification cannot paſs againſt deeds recorded in the books of ſeſſion, if the defender ſhall, before the ſecond term, offer a condeſcendence of the dates of their regiſtration, unleſs falſehood be objected: in which caſe, the original muſt be brought from the record to the court. But an extract from the inferior court is no bar to certification; the principal writing muſt be laid before the court of ſeſſion on a proper warrant.

Simple reduction.

5. In an action of ſimple reduction the certification is only temporary, declaring the writings called for null, until they be produced; ſo that they recover their full force after production, even againſt the purſuer himſelf; for which reaſon, that proceſs is now ſeldom uſed. Becauſe its certification is not ſo ſevere as in reduction-improbation, there is but one term aſſigned to the defender for producing the deeds called for.

Grounds of reduction.

6. The moſt uſual grounds of reduction of writings are, the want of the requiſite ſolemnities; that the granter was minor, or interdicted, or inhibited; or that he ſigned the deed on death-bed, or was compelled or frightened into it, or was circumvented; or that he granted it in prejudice of his lawful creditors.

7. In reductions on the head of force, or fear, or fraud and circumvention, the purſuer muſt libel the particular circumſtances from which his allegation is to be proved. Reduction is not competent upon every degree of force or fear; it muſt be ſuch as would ſhake a man of conſtancy and reſolution. Neither is it competent, on that fear which ariſes from the juſt authority of huſbands or parents over their wives or children, nor upon the fear ariſing from the regular execution of lawful diligence by caption, provided the deeds granted under that fear relate to the ground of debt contained in the diligence; but if they have no relation to that debt, they are reducible *ex metu*.

8. Alienations granted by debtors after contracting of lawful debts, in favour of conjunct or confident perſons, without juſt and neceſſary cauſes, and without a juſt price really paid, are, by the act 1621, declared to be null. One is deemed a prior creditor, whoſe ground of debt exiſted before the right granted

by the debtor; though the written voucher of the debt ſhould bear a date poſterior to it. Perſons are accounted conjunct, whoſe relation to the granter is ſo near, as to bar them from judging in his cauſe. Confident perſons are thoſe who appear to be in the granter's confidence, by being employed in his affairs, or about his perſon; as a doer, ſteward, or domeſtic ſervant.

9. Rights, though gratuitous, are not reducible, if the granter had, at the date thereof, a ſufficient fund for the payment of his creditors. Proviſions to children are, in the judgement of law, gratuitous; ſo that their effect, in a queſtion with creditors, depends on the ſolvency of the granter: but ſettlements to wives, either in marriage-contracts, or even after marriage, are onerous, in ſo far as they are rational; and conſequently are not reducible, even though the granter was inſolvent. This rule holds alſo in rational tochers contracted to huſbands: but it muſt, in all caſes, be qualified with this limitation, *if the inſolvency of the granter was not publickly known*; for if it was, fraud is preſumed in the receiver of the right, by contracting with the bankrupt.

10. The receiver of the deed, if he be a conjunct or confident perſon, muſt inſtruct or ſupport the onerous cauſe of his right, not merely by his own oath, but by ſome circumſtances or adminicles. But where a right is granted to a ſtranger, the narrative of it expreſſing an onerous cauſe, is ſufficient *per ſe* to ſecure it againſt reduction.

11. All voluntary payments or rights made by a bankrupt to one creditor, to diſappoint the more timeous diligence of another, are reducible at the inſtance of that creditor who has uſed the prior diligence. A creditor, though his diligence be but begun by citation, may inſiſt in a reduction of all poſterior voluntary rights granted to his prejudice; but the creditor who negelects to complete his begun diligence within a reaſonable time, is not intitled to reduce any right granted by the debtor, after the time that the diligence is conſidered as abandoned.

12. A prohibited alienation, when conveyed by the receiver to another who is not privy to the fraud, ſubſiſts in the perſon of the *bona fide* purchaſer. In the caſe of moveable rights, this nullity is receivable by exception; but it muſt be declared by reduction where the right is heritable.

13. By act 1696, *c.* 5. all alienations by a bankrupt, within 60 days before his bankruptcy, to one creditor in preference to another, are reducible, at the inſtance even of ſuch co-creditors as had not uſed the leaſt ſtep of diligence. A bankrupt is there deſcribed by the following characters; diligence uſed againſt him by horning and caption; and inſolvency, joined either with impriſonment, retiring to the ſanctuary, abſconding, or forcibly defending himſelf from diligence. It is ſufficient that a caption is raiſed againſt the debtor, though it be not executed, provided he has retired to ſhun it. And by the late bankrupt ſtatute 23d Geo. III. it is declared, that in all actions and queſtions ariſing upon the conſtruction and effect of the act 1696; when a debtor is out of Scotland, or not liable to be impriſoned by reaſon of privilege or perſonal protection, a charge of horning executed againſt him, together with either an arreſtment of any of his perſonal effects not looſed or diſcharged within fifteen days, or on poinding executed of any of his moveables, or a decree of adjudication of any part of his heritable eſtate, or ſequeſtration by the act of a proper court, of all or any part of his eſtate or effects, heritable or moveable, for payment of debt, ſhall, when joined with inſolvency, be held as ſufficient proof of notour bankruptcy; and from and after the laſt ſtep of ſuch diligence, the ſaid debtor, if inſolvent, ſhall be held bankrupt. It is provided (by ſaid act 1696), that all heritable bonds or rights on which ſeiſin may follow, ſhall be reckoned, in a queſtion with the granter's other creditors upon this act, to be of the date of the ſeiſin following thereon. But this act was found to relate only to ſecurities for former debts, and not to *nova debita*.

Actions either *rei perſecutoriæ*, or penal.

14. Actions are divided into *rei perſecutoriæ*, and *pœnales*. By the firſt, the purſuer inſiſts barely to recover the ſubject that is his, or the debt due to him: and this includes the damage ſuſtained; for one is as truly a ſufferer in his patrimonial intereſt by that damage, as by the loſs of the ſubject itſelf. In penal actions, which always ariſe *ex delicto*, ſomething is alſo demanded by way of penalty.

Spuilzie.

15. Actions of ſpuilzie, ejection, and intruſion, are penal. An action of ſpuilzie is competent to one diſpoſſeſſed of a moveable ſubject violently, or without order of law, againſt the perſon diſpoſſeſſing: not only for being reſtored to the poſſeſſion of the ſubject, if extant, or for the value, if it be deſtroyed, but alſo for the violent profits, in caſe the action be brought within three years from the ſpoliation. Ejection and intruſion are, in heritable ſubjects, what ſpuilzie is in moveables. The difference between the two firſt is, that in ejection, violence is uſed; whereas the intruder enters into the void poſſeſſion, without either a title from the proprietor, or the warrant of a judge. The actions ariſing from all the three are of the ſame general nature.

Contravention of law borrows.

16. The action of contravention of law-borrows is alſo penal. It proceeds on letters of law-borrows, (from *borgh*, a cautioner), which contain a warrant to charge the party complained upon, that he may give ſecurity not to hurt the complainer in his perſon, family, or eſtate. Theſe letters do not require the previous citation of the party complained upon, becauſe the caution which the law requires is only for doing what is every man's duty; but, before the letters are executed againſt him, the complainer muſt make oath that he dreads bodily harm from him. The penalty of contravention is aſcertained to a ſpecial ſum, according to the offender's quality; the half to be applied to the fiſk, and the half to the complainer. Contravention is not incurred by the uttering of reproachful words, where they are not accompanied, either with acts of violence, or at leaſt a real injury; and as the action is penal, it is elided by any probable ground of excuſe.

Penal actions, whether tranſmiſſible againſt the purſuer.

17. Penalties are the conſequences of delict, or tranſgreſſion; and as no heir ought to be accountable for the delict of his anceſtor, farther than the injured perſon has really ſuffered by it, penal actions die with the delinquent, and are not tranſmiſſible againſt heirs. Yet the action, if it has been commenced and litiſconteſted in the delinquent's lifetime, may be continued

nued againſt the heir, though the delinquent ſhould die during the dependence. Some actions are *rei perſecutoriæ* on the part of the purſuer, when he inſiſts for ſimple reſtitution; which yet may be penal in reſpect of the defender: *e. g.* the action on the paſſive title of vitious intromiſſion; by which the purſuer frequently recovers the debt due to him by the deceaſed, tho' it ſhould exceed the value of the goods intermeddled with by the defenders.

Actions petitory.

18. The moſt celebrated diviſion of actions in Scots law is into *petitory*, *poſſeſſory*, and *declaratory*. *Petitory* actions are thoſe, where ſomething is demanded from the defender, in conſequence of a right of property, or of credit in the purſuer: Thus, actions for reſtitution of moveables, actions of poinding, of forthcoming, and indeed all perſonal actions upon contracts or quaſi-contracts, are petitory. *Poſſeſſory* actions are thoſe which are founded, either upon poſſeſſion alone, as ſpuilzies; or upon poſſeſſion joined with another title, as removings; and they are competent either for getting into poſſeſſion, for holding it, or for recovering it; analogous to the interdicts of the Roman law, *quorum bonorum, uti poſſidetis*, and *unde vi*.

poſſeſſory.

Of moleſtation.

19. An action of moleſtation is a poſſeſſory action, competent to the proprietor of a land-eſtate, againſt thoſe who diſturb his poſſeſſion. It is chiefly uſed in queſtions of commonty, or of controverted marches. Where a declarator of property is conjoined with a proceſs of moleſtation, the ſeſſion alone is competent to the action. Actions on brieves of perambulation, have the ſame tendency with moleſtations, viz. the ſettling of marches between conterminous lands.

Of mails and duties.

20. The actions of mails and duties is ſometimes petitory, and ſometimes poſſeſſory. In either caſe, it is directed againſt the tenants and natural poſſeſſors of land-eſtates, for payment to the purſuer of the rents remaining due by them for paſt crops, and of the full rent for the future. It is competent, not only to a proprietor whoſe right is perfected by ſeiſin, but to a ſimple diſponee, for a diſpoſition of lands includes a right to the mails and duties; and conſequently to an adjudger, for an adjudication is a judicial diſpoſition. In the petitory action, the purſuer, ſince he founds upon right, not poſſeſſion, muſt make the proprietor, from whom the tenants derive their right, party to the ſuit; and he muſt ſupport his claim by titles of property or diligences, preferable to thoſe in the perſon of his competitor. In the poſſeſſory, the purſuer who libels that he, his anceſtors, or authors, have been ſeven years in poſſeſſion, and that therefore he has the benefit of a poſſeſſory judgment, need produce no other title than a ſeiſin, which is a title ſufficient to make the poſſeſſion of heritage lawful; and it is enough, if he calls the natural poſſeſſors, though he ſhould neglect the proprietor. A poſſeſſory judgment founded on ſeven years poſſeſſion, in conſequence either of a ſeiſin or a tack, has this effect, that though one ſhould claim under a title preferable to that of the poſſeſſor, he cannot compete with him in the poſſeſſion, till in a formal proceſs of reduction he ſhall obtain the poſſeſſor's title declared void.

Petitory.

Poſſeſſory.

Poſſeſſory judgment.

Declaratory action.

21. A *declaratory* action is that, in which ſome right is craved to be declared in favour of the purſuer, but nothing ſought to be paid or performed by the defender, ſuch as declarators of marriage, of irritancy, of expiry of the legal reverſion, &c. Under this claſs may be alſo comprehended reſciſſory actions, which, without any perſonal concluſion againſt the defender, tend ſimply to ſet aſide the rights or writings libelled, in conſequence of which a contrary right or immunity ariſes to the purſuer. Decrees upon actions that are properly declaratory confer no new right; they only declare what was the purſuer's right before, and ſo have a retroſpect to the period at which that right firſt commenced. Declarators, becauſe they have no perſonal concluſion againſt the defender, may be purſued againſt an apparent heir without a previous charge given him to enter to his anceſtor; unleſs where ſpecial circumſtances require a charge.

Action for proving the tenor.

22. An action for proving the tenor, whereby a writing, which is deſtroyed or amiſſing, is endeavoured to be revived, is in effect declaratory. In obligations that are extinguiſhable barely by the debtor's retiring or cancelling them, the purſuer, before a proof of a tenor is admitted, muſt condeſcend on ſuch a *caſus amiſſionis*, or accident by which the writing was deſtroyed, as ſhows it was loſt when in the creditor's poſſeſſion; otherwiſe bonds that have been cancelled by the debtor on payment, might be reared up as ſtill ſubſiſting againſt him: But in writings which require contrary deeds to extinguiſh their effect, as aſſignations, diſpoſitions, charters, &c. it is ſufficient to libel that they were loſt, even *caſu fortuito*.

Adminicles in writing.

23. Regularly, no deed can be revived by this action, without ſome adminicle in writing, referring to that which is libelled; for no written obligation ought to be raiſed up barely on the teſtimony of witneſſes. If theſe adminicles afford ſufficient conviction that the deed libelled did once exiſt, the tenor is admitted to be proved by witneſſes, who muſt depoſe, either that they were preſent at ſigning the deed, or that they afterwards ſaw it duly ſubſcribed. Where the relative writings contain all the ſubſtantial clauſes of that which is loſt, the tenor is ſometimes ſuſtained without witneſſes. In a writing which is libelled to have contained uncommon clauſes, all theſe muſt appear by the adminicles. Actions of proving the tenor are, on account of their importance, appropriated to the court of ſeſſion; and by the old form, the teſtimony of the witneſſes could not be received but in preſence of all the judges.

Multiple-poinding.

24. The action of double or multiple-poinding may be alſo reckoned *declaratory*. It is competent to a debtor who is diſtreſſed, or threatened with diſtreſs, by two or more perſons claiming right to the debt, and who therefore brings the ſeveral claimants into the field, in order to debate and ſettle their ſeveral preferences, that ſo he may pay ſecurely to him whoſe right ſhall be found preferable. This action is daily purſued by an arreſtee, in the caſe of ſeveral arreſtments uſed in his hands for the ſame debt: or by tenants in the caſe of ſeveral adjudgers, all of whom claim right to the ſame rents. In theſe competitions, any of the competitors may bring an action of multiple-poinding in name of the tenants, or other debtors, without their conſent, or even though they ſhould diſclaim the proceſs; ſince the law has introduced it as the proper remedy for getting ſuch competitions determined: And while the ſubject in controverſy continues *in medio*, any third perſon who conceives he has a right to it, may,

though he ſhould not be cited as a defender, produce his titles, as if he were an original party to the ſuit, and will be admitted for his intereſt in the competition. By the foreſaid bankrupt ſtatute, however, it is competent, in the caſe of a forthcoming or multiple-poinding raiſed on an arreſtment uſed within thirty days prior, or four kalendar months ſubſequent to a bankruptcy, for any other creditor producing his intereſt, and making his claim, in the proceſs at any time before the expiration of the four months, to be ranked in the ſame manner as if he had uſed the form of arreſtment.

Acceſſory actions.

25 Certain actions may be called *acceſſory*, becauſe they are merely preparatory or ſubſervient to other actions. Thus, exhibitions *ad deliberandum*, at the inſtance of an heir againſt the creditors or cuſtodiers of his anceſtor's writings, are intended only to pave the way for future proceſſes. An action of *transference* is alſo of this ſort, whereby an action, during the pendency of which the defender happens to die, is craved to be transferred againſt his repreſentative, in the ſame condition in which it ſtood formerly. Upon the purſuer's death his heir may inſiſt in a cauſe againſt the defender, upon producing either a retour or a confirmed teſtament, according as the ſubject is heritable or moveable. Transferences being but incidental to other actions, can be pronounced by that inferior judge alone before whom the principal cauſe depended; but where the repreſentatives of the deceaſed live in another territory, it is the ſupreme court muſt transfer. Obligations may now be regiſtered ſummarily after the creditor's death; which before was not admitted, without a ſeparate proceſs of regiſtration, to which the granter was neceſſarily to be made a party.

Transference.

Wakening.

26. A proceſs of *wakening* is likewiſe acceſſory. An action is ſaid to ſleep, when it lies over not inſiſted in for a year, in which caſe its effect is ſuſpended: but even then it may, at any time within the years of preſcription, be revived or wakened by a ſummons, in which the purſuer recites the laſt ſtep of the proceſs, and concludes that it may be again carried on as if it had not been diſcontinued. An action that ſtands upon any of the inner-houſe rolls cannot ſleep; nor an action in which decree is pronounced, becauſe it has got its full completion: Conſequently the decree may be extracted after the year, without the neceſſity of a wakening.

Tranſumpt.

27. An action of *tranſumpt* falls under the ſame claſs. It is competent to thoſe who have a partial intereſt in writings that are not in their own cuſtody, againſt the poſſeſſors thereof, for exhibiting them, that they may be tranſumed for their behoof. Tho' the ordinary title in this proceſs be an obligation by the defender to grant tranſumpts to the purſuer, it is ſufficient if the purſuer can ſhow that he has an intereſt in the writings; but in this caſe, he muſt tranſume them on his own charges. Actions of tranſumpt may be purſued before any judge-ordinary. After the writings to be tranſumed are exhibited, full duplicates are made out, collated, and ſigned, by one of the clerks of court, which are called *tranſumpts*, and are as effectual as an extract from the regiſter.

Brieves.

28. Actions proceeded anciently upon brieves iſſuing from the chancery, directed to the juſticiary or judge ordinary, who tried the matter by a jury, upon whoſe verdict judgment was pronounced: And to this day are retained certain brievies, as of *inqueſt*, *terce*, *idiotry*, *tutory*, *perambulation*, and perhaps two or three others: But ſummonſes were, immediately upon the inſtitution of the college of juſtice, introduced in the place of brieves. A ſummons, when applied to actions purſued before the ſeſſion, is a writ in the king's name, iſſuing from his ſignet upon the purſuer's complaint, authoriſing meſſengers to cite the defender to appear before the court and make his defences; with certification, if he fail to appear, that decree will be pronounced againſt him in terms of the certification of the ſummons.

Summonſes.

Induciæ legales.

29. The days indulged by law to a defender, between his citation and appearance, to prepare for his defence, are called *induciæ legales*. If he is within the kingdom, 21 and 6 days, for the firſt and ſecond diets of appearance, muſt be allowed him for that purpoſe; and if out of it, 60 and 15. Defenders reſiding in Orkney or Zetland muſt be cited on 40 days. In certain ſummonſes which are privileged, the *induciæ* are ſhortened: Spuilzies and ejections proceed on 15 days; wakenings and transferences, being but incidental, on ſix; (ſee the liſt of privileged ſummonſes, in act of ſederunt June 29th 1672.) A ſummons muſt be executed, *i. e.* ſerved againſt the defender, ſo as the laſt diet of appearance may be within a year after the date of the ſummons; and it muſt be called within a year after that diet, otherwiſe it falls for ever. Offence againſt the authority of the court, acts of malverſation in office by any member of the college of juſtice, and acts of violence and oppreſſion committed during the dependence of a ſuit by any of the parties, may be tried without a ſummons, by a ſummary complaint.

Concourſe of actions.

30. Though the Romans acknowledged a concourſe of actions in their proceedings, it is not known in the law of Scotland. Therefore, where an action is in part penal, *e. g.* a removing, ſpuilzie, &c. a purſuer who reſtricts his demand to, and obtains a decree merely for, reſtitution, cannot thereafter bring a new proceſs for the violent profits. Yet the ſame fact may be the foundation both of a criminal and civil action, becauſe theſe two are intended for different purpoſes; the one for ſatisfying the public juſtice, the other for indemnifying the private party: And though the defender ſhould be abſolved in the criminal trial, for want of evidence, the party injured may bring an action *ad civilem effectum*, in which he is intitled to refer the libel to the defender's oath.

Accumulation of actions.

31. One libel or ſummons may contain different concluſions on the ſame ground of right, reſciſſory, declaratory, petitory, &c. if they be not repugnant to each other: Nay, though different ſums be due to one, upon diſtinct grounds of debt, or even by different debtors, the creditor may inſiſt againſt them all in the ſame ſummons.

Defences.

32. Defences are pleas offered by a defender for eliding an action. They are either *dilatory*, Which do not enter into the cauſe itſelf, and ſo can only procure an abſolvitor from the *lis pendens*; Or *peremptory*, which entirely cut off the purſuer's right of action. The firſt, becauſe they relate to the forms of proceeding, muſt be offered *in limine judicii*, and all of them at once. But peremptory defences may be proponed at any time before ſentence. By a late act of ſederunt,

however (1787), all defences, both dilatory and peremptory, ſo far as they are known, muſt be proponed at returning the ſummons, under penalty; and the ſame enactment extends to the caſes of ſuſpenſions and advocations. The writings to be founded upon by the parties alſo muſt be produced; the intention of the court, in framing the act of ſederunt, being to accelerate as much as poſſible the deciſion of cauſes.

Litiſconteſtation.

33. A cauſe, after the parties had litigated it before the judge, was ſaid by the Romans to be litiſconteſted. By litiſconteſtation a judicial contract is underſtood to be entered into by the litigants, by which the action is perpetuated againſt heirs, even when it ariſes *ex delicto*. By the law litiſconteſtation is not formed till an act is extracted, admitting the libel or defences to proof.

clxxixv.

Sect. II. *Of Probation.*

Probation, *prout de jure*; by ſingle combat;

All allegations by parties to a ſuit, muſt be ſupported by proper proof. Probation is either by writing, by the party's own oath, or by witneſſes. In the caſe of allegations, which may be proved by either of the three ways, a proof is ſaid to be admitted *prout de jure*; becauſe, in ſuch caſe, all the legal methods of probation are competent to the party; if the proof he brings by writing be lame, he may have recourſe either to witneſſes or to his adverſary's oath; but, if he ſhould firſt take himſelf to the proof by oath, he cannot thereafter uſe any other probation (for the reaſon aſſigned par. 3.); and, on the contrary, a purſuer who has brought a proof by witneſſes, on an extracted act, is not allowed to recur to the oath of the defender. Single combat, as a ſort of appeal to Providence, was, by the ancient law, admitted as evidence, in matters both civil and criminal. It was afterwards reſtricted to the caſe of ſuch capital crimes where no other proof could be had; ſome traces of this blind method of trial remained even in the reign of James VI. who, by 1600, *c.* 12 might authoriſe duels on weighty occaſions.

by writing.

2. As obligations or deeds ſigned by the party himſelf, or his anceſtors or authors, muſt be, of all evidence, the leaſt liable to exception; therefore every debt or allegation may be proved by proper evidence in writing. The ſolemnities eſſential to probative deeds have been already explained, (n° clxxiv. 3. *et ſeq.*) Books of account kept by merchants, tradeſmen, and other dealers in buſineſs, though not ſubſcribed, are probative againſt him who keeps them; and, in caſe of furniſhing by a ſhop-keeper, ſuch books, if they are regularly kept by him, ſupported by the teſtimony of a ſingle witneſs, afford a *ſemiplena probatio* in his favour, which becomes full evidence by his own oath in ſupplement. Notorial inſtruments and executions by meſſengers bear full evidence, that the ſolemnities therein ſet forth were uſed, not to be invalidated otherwiſe than by a proof of falſehood; but they do not prove any other extrinſic facts therein averred, againſt third parties.

Probation oath of party in reference.

3. Regularly, no perſon's right can be proved by his own oath, nor taken away by that of his adverſary; becauſe theſe are the bare averments of parties in their own favour. But, where the matter in iſſue is referred by one of the parties to the oath of the other, ſuch oath, though made in favour of the deponent himſelf, is deciſive of the point; becauſe the reference is a virtual contract between the litigants, by which they are underſtood to put the iſſue of the cauſe upon what ſhall be depoſed: and this contract is ſo ſtrictly regarded, that the party who refers to the oath of the other cannot afterwards, in a civil action, plead upon any deed againſt the party depoſing, inconſiſtent with his oath. To obviate the ſnares that may be laid for perjury, he, to whoſe oath of verity a point is referred, may refuſe to depoſe, till his adverſary ſwear that he can bring no other evidence in proof of his allegation.

4. A defender, though he cannot be compelled to ſwear to facts in a libel properly criminal; yet may, in treſpaſſes, where the concluſion is limited to a fine, or to damages. In general, an oath of party cannot either hurt or benefit third parties; being, as to them, *res inter alios acta*.

Qualified oaths.

5. An oath upon reference is ſometimes qualified by ſpecial limitations reſtricting it. The qualities which are admitted by the judge as part of the oath, are called *intrinſic*; thoſe which the judge rejects or ſeparates from the oath, *extrinſic*. Where the quality makes a part of the allegation which is revelantly referred to oath, it is intrinſic. Thus, becauſe a merchant, ſuing for furniſhings after the three years, muſt, in order to make a relevancy, offer to prove by the defender's oath, not only the delivery of the goods, but that the price is ſtill due; therefore, though the defender ſhould acknowledge upon oath his having received the goods, yet, if he adds, that he paid the price, this laſt part being a denial that the debt ſubſiſts, is intrinſic, ſince it is truly the point referred to oath. Where the quality does not import an extinction of the debt, but barely a counter claim, or *mutua petitio*, againſt the purſuer, it is held as extrinſic, and muſt be proved *aliunde*. Neither can a defender who in his oath admits the conſtitution of a debt, get off by adjecting the quality of payment, where the payment ought by its nature to be vouched by written evidence.

Oaths in ſupplement

6. Oaths of verity are ſometimes referred by the judge to either party, *ex officio*; which, becauſe they are not founded on any implied contract between the litigants, are not finally deciſive, but may be traverſed on proper evidence afterwards produced. Theſe oaths are commonly put by the judge for ſupplying a lame or imperfect proof, and are therefore called *oaths in ſupplement*. (See par. 2.)

Oath of calumny

7. To prevent groundleſs allegations, oaths of calumny have been introduced, by which either party may demand his adverſary's oath, that he believes the fact contained in his libel or defences to be juſt and true. As this is an oath, not of verity, but only of opinion, the party who puts it to his adverſary does not renounce other probation; and therefore no party is bound to give an oath of calumny, on recent facts of his own, for ſuch oath is really an oath of verity. Theſe oaths have not been ſo frequent ſince the act of ſederunt, Feb. 1. 1715, whereby any party, againſt whom a fact ſhall be alleged, is obliged, without making oath, to confeſs or deny it: and, in caſe of calumnious denial, is ſubjected to the expence that the other party has thereby incurred.

8. In all oaths, whether of verity or calumny, the citation carries, or at leaſt implies, a certification, that if the party does not appear at the day aſſigned for depoſing, he ſhall be held *pro confeſſo*; from a preſumption

tion of his conſciouſneſs, that the fact upon which he declines to ſwear makes againſt him; but no party can be held *pro confeſſo*, if he be in the kingdom, without a previous perſonal citation uſed againſt him. Though an oath which reſolves into a *non memini*, cannot be ſaid to prove any point; yet where one ſo depoſes upon a recent fact, to which he himſelf was privy, his oath is conſidered as a diſſembling of the truth, and he is held *pro confeſſo*, as if he had refuſed to ſwear.

A *non memini* oath.

Oath *in litem*.

9. An oath *in litem*, is that which the judge refers to a purſuer, for aſcertaining either the quantity or the value of goods which have been taken from him by the defender without order of law, or the extent of his damages. An oath *in litem*, as it is the affirmation of a party in his own behalf, is only allowed where there is proof that the other party has been engaged in ſome illegal act, or where the public policy has made it neceſſary, (ſee n° clxxiii. 11.) This oath, as to the quantities, is not admitted, where there is a concurring teſtimony of witneſſes brought in proof of it. When it is put as to the value of goods, it is only an oath of credulity; and therefore it has always been ſubject to the modification of the court.

Probation by witneſſes, in what caſes rejected,

10. The law of Scotland rejects the teſtimony of witneſſes, (1.) In payment of any ſum above L. 100 Scots, all which muſt be proved either *ſcripto vel juramento.* (2.) In all gratuitous promiſes, though for the ſmalleſt trifle. (3.) In all contracts, where writing is either eſſential to their conſtitution, (ſee n° clxxiv. 2.) or where it is uſually adhibited as in the borrowing of money. And it is a general rule, ſubject to the reſtrictions mentioned in the next par. that no debt or right, once conſtituted by writing, can be taken away by witneſſes.

in what admitted.

11. On the other part, probation by witneſſes is admitted to the extent of L. 100 Scots, in payments, nuncupative legacies, and verbal agreements which contain mutual obligations. And it is received to the higheſt extent, (1.) In all bargains which have known engagements naturally ariſing from them, concerning moveable goods. (2.) In facts performed in ſatisfaction, even of a written obligation, where ſuch obligation binds the party preciſely to the performance of them. (3.) In facts which with difficulty admit of a proof by writing, even though the effect of ſuch proof ſhould be the extinction of a written obligation, eſpecially if the facts import fraud or violence; thus, a bond is reducible *ex dolo*, on a proof by witneſſes. Laſtly, all intromiſſion by a creditor with the rents of his debtor's eſtate payable in grain, may be proved by witneſſes; and even intromiſſion with the ſilver-rent, where the creditor has entered into the total poſſeſſion of the debtor's lands.

What perſons rejected as witneſſes.

12. No perſon, whoſe near relation to another bars him from being a judge in his cauſe, can be admitted as a witneſs for him; but he may againſt him, except a wife or child, who cannot be compelled to give teſtimony againſt the huſband or parent *ob reverentiam perſonæ, et metum perjurii.* Though the witneſs, whoſe propinquity to one of the parties is objected to, be as nearly related to the other, the objection ſtands good.

13. The teſtimony of infamous perſons is rejected, *i. e.* perſons who have been guilty of crimes that law declares to infer infamy, or who have been declared infamous by the ſentence of a judge; but *infamia facti* does not diſqualify a witneſs. Pupils are inhabile witneſſes; being, in the judgment of law, incapable of the impreſſions of an oath. And in general witneſſes otherwiſe exceptionable may, where there is a penury of witneſſes ariſing from the nature or circumſtances of the fact, be received *cum nota;* that is, their teſtimony, though not quite free from ſuſpicion, is to be conjoined with the other evidence, and to have ſuch weight given it as the judge ſhall think it deſerves.

Purgation of witneſſes.

14. All witneſſes, before they are examined in the cauſe, are purged of partial counſel; that is, they muſt declare, that they have no intereſt in the ſuit, nor have given advice how to conduct it; that they have got neither bribe nor promiſe, nor have been inſtructed how to depoſe; and that they bear no enmity to either of the parties. Theſe, becauſe they are the points put to a witneſs before his making oath, are called *initialia teſtimonii.* Where a party can bring preſent proof of a witneſs's partial counſel, in any of the above particulars, he ought to offer it before the witneſs be ſworn; but, becauſe ſuch objection, if it cannot be inſtantly verified, will be no bar to the examination, law allows the party in that caſe to proteſt for *reprobator*, before the witneſs is examined; *i. e.* that he may be afterwards allowed to bring evidence of his enmity, or other inability. Reprobator is competent even after ſentence, where proteſtation is duly entered; but in that caſe, the party inſiſting muſt conſign L. 100 *Scots*, which he forfeits if he ſuccumb. This action muſt have the concurrence of the king's advocate, becauſe the concluſion of it imports perjury; and for this reaſon, the witneſs muſt be made a party to it.

Diligence againſt witneſſes.

15. The interlocutory ſentence or warrant, by which parties are authoriſed to bring their proof, is either by way of act, or of incident diligence. In an act, the lord ordinary who pronounces it is no longer judge in the proceſs; but in an incident diligence, which is commonly granted upon ſpecial points, that do not exhauſt the cauſe, the lord ordinary continues judge. If a witneſs does not appear at the day fixed by the warrant of citation, a ſecond warrant is granted of the nature of a caption, containing a command to meſſengers to apprehend and bring him before the court. Where the party to whom a proof is granted, brings none within the term allowed by the warrant, an interlocutor is pronounced, circumducing the term, and precluding him from bringing evidence thereafter. Where evidence is brought, if it be upon an act, the lord ordinary on the acts, after the term for proving is elapſed, declares the proof concluded; and thereupon a ſtate of the caſe is prepared by the ordinary on concluded cauſes, which muſt be judged by the whole lords; but if the proof be taken upon an incident diligence, the import of it may be determined by the lord ordinary in the cauſe.

Circumduction.

Preſumptions.

16. Where facts do not admit a direct proof, preſumptions are received as evidence which in many caſes, make as convincing a proof as the direct. Preſumptions are conſequences deduced from facts known or proved, which infer the certainty, or at leaſt a ſtrong probability, of another fact to be proved. This kind of probation is therefore called *artificial*, becauſe it requires a reaſoning to infer the truth of the point in queſtion, from the facts that already appear in proof. Preſumptions are either, 1. *juris et de jure;* 2. *juris;* or, 3. *ho-*

minis or *judicis*. The firſt ſort obtains, where ſtatute or cuſtom eſtabliſhes the truth of any point upon a preſumption; and it is ſo ſtrong, that it rejects all proof that may be brought to elide it in ſpecial caſes. Thus, the teſtimony of a witneſs, who forwardly offers himſelf without being cited, is, from a preſumption of his partiality, rejected, let his character be ever ſo fair; and thus alſo, a minor, becauſe he is by law preſumed incapable of conducting his own affairs, is upon that preſumption diſabled from acting without the conſent of his curators, though he ſhould be known to behave with the greateſt prudence. Many ſuch preſumptions are fixed by ſtatute.

17. *Præſumptiones juris* are thoſe which the law-books or deciſions have eſtabliſhed, without founding any particular conſequence upon them, or ſtatuting *ſuper præſumpto*. Moſt of this kind are not proper preſumptions inferred from poſitive facts, but are founded merely on the want of a contrary proof; thus, the legal preſumptions for freedom, for life, for innocence, &c. are in effect ſo many negative propoſitions, that ſervitude, death, and guilt, are not to be preſumed, without evidence brought by him who makes the allegation. All of them, whether they be of this ſort, or proper preſumptions, as they are only conjectures formed from what commonly happens, may be elided, not only by direct evidence, but by other conjectures, affording a ſtronger degree of probability to the contrary. *Præſumptiones hominis* or *judicis*, are thoſe which ariſe daily from the circumſtances of particular caſes; the ſtrength of which is to be weighed by the judge.

Fictio juris.

18. A *fictio juris* differs from a preſumption. Things are preſumed, which are likely to be true; but a fiction of law aſſumes for truth what is either certainly falſe, or at leaſt is as probably falſe as true. Thus an heir is feigned or conſidered in law as the ſame perſon with his anceſtor. Fictions of law muſt, in their effects, be always limited to the ſpecial purpoſes of equity for which they were introduced; ſee an example, Nº clxxxiii. 3.

clxxxv.

Sect. III. *Of Sentences and their Executions.*

Res judicatæ.

Property would be moſt uncertain, if debateable points might, after receiving a definitive judgment, be brought again in queſtion, at the pleaſure of either of the parties: every ſtate has therefore fixed the character of final to certain ſentences or decrees, which in the Roman law are called *res judicatæ*, and which exclude all review or rehearing.

Decrees *in foro.*

2. Decrees of the court of ſeſſion, are either *in foro contradictorio*, where both parties have litigated the cauſe, or in abſence of the defender. Decrees of the ſeſſion *in foro* cannot, in the general caſe, be again brought under the review of the court, either on points which the parties neglected to plead before ſentence (which we call *competent* and *omitted*), or upon points pleaded and found inſufficient (proponed and repelled). But decrees, though *in foro*, are reverſible by the court, where either they labour under eſſential nullities; *e. g.* where they are *ultra petita*, or not conformable to their grounds and warrants, or founded on an error in calcul, *&c.*; or where the party againſt whom the decree is obtained has thereafter recovered evidence ſufficient to overturn it, of which he knew not before.

Two conſecutive interlocutors are final.

3. As parties might formerly reclaim againſt the ſentences of the ſeſſion, at any time before extracting the decree, no judgment was final till extract; but now, a ſentence of the inner-houſe, either not reclaimed againſt within ſix ſederunt days after its date, or adhered to upon a reclaiming bill, though it cannot receive execution till extract, makes the judgement final as to the court of ſeſſion. And, by an order of the houſe of lords, March 24. 1725, no appeal is to be received by them from ſentences of the ſeſſion, after five years from extracting the ſentence; unleſs the perſon intitled to ſuch appeal be minor, clothed with a huſband, *non compos mentis*, impriſoned, or out of the kingdom. Sentences pronounced by the lord ordinary have the ſame effect, if not reclaimed againſt, as if they were pronounced in preſence; and all petitions againſt the interlocutor of an ordinary muſt be preferred within eight ſederunt days after ſigning ſuch interlocutor.

Time limited for appeals.

Decrees in abſence.

4. Decrees, in abſence of the defender, have not the force of *res judicatæ* as to him; for where the defender does not appear, he cannot be ſaid to have ſubjected himſelf by the judicial contract which is implied in litiſconteſtation; a party therefore may be reſtored againſt theſe, upon paying to the other his coſts in recovering them. The ſentences of inferior courts may be reviewed by the court of ſeſſion,—before decree, by advocation,—and after decree, by ſuſpenſion or reduction; which two laſt are alſo the methods of calling in queſtion ſuch decrees of the ſeſſion itſelf, as can again be brought under the review of the court.

Decrees reviewed either by reduction or ſuſpenſion.

5. Reduction is the proper remedy, either where the decree has already received full execution by payment, or where it decrees nothing to be paid or performed, but ſimply declares a right in favour of the purſuer. Suſpenſion is that form of law by which the effect of a ſentence condemnatory, that has not yet received execution, is ſtayed or poſtponed till the cauſe be again conſidered. The firſt ſtep towards ſuſpenſion is a bill preferred to the lord ordinary on the bills. This bill, when the deſire of it is granted, is a warrant for iſſuing letters of ſuſpenſion which paſs the ſignet; but if the preſenter of the bill ſhall not, within 14 days after paſſing it, expedite the letters, execution may by act of ſederunt 1677 proceed on the ſentence. In practice, however, it is uſual for the charger to put up a proteſtation in the minute-book for production of the ſuſpenſion, which may be expedited at any time before this is done; and if the ſuſpender ſhall allow the proteſtation to be extracted, the ſiſt falls. Suſpenſions of decrees *in foro* cannot paſs, but by the whole lords in time of ſeſſion, and by three in vacation time; but other decrees may be ſuſpended by any one of the judges. By the late act of ſederunt (1787), in order to remedy the abuſe of preſenting a multiplicity of bills of ſuſpenſion of the decrees of inferior judges in ſmall cauſes which have paſſed in abſence, it is declared, that all bills of ſuſpenſion of decreets by inferior judges in abſence of the defenders in cauſes under 12 l. ſterling value, ſhall be refuſed and remitted to the inferior judge if competent; the ſuſpender, however, before being heard in the inferior court, reimburſing

ſing the charger of the expences incurred by him previous to the remit.

Suſpenders muſt give caution.

6. As ſuſpenſion has the effect of ſtaying the execution of the creditor's legal diligence, it cannot, in the general caſe, paſs without caution given by the ſuſpender to pay the debt, in the event it ſhall be found due. Where the ſuſpender cannot, from his low or ſuſpected circumſtances, procure unqueſtionable ſecurity, the lords admit juratory caution, *i. e.* ſuch as the ſuſpender ſwears is the beſt he can offer; but the reaſons of ſuſpenſion are, in that caſe, to be conſidered with particular accuracy at paſſing the bill. Decrees in favour of the clergy, of univerſities, hoſpitals, or pariſh-ſchoolmaſters, for their ſtipends, rents, or ſalaries, cannot be ſuſpended, but upon production of diſcharges, or on conſignation of the ſums charged for. A charger, who thinks himſelf ſecure without a cautioner, and wants diſpatch, may, where a ſuſpenſion of his diligence is ſought, apply to the court to get the reaſons of ſuſpenſion ſummarily diſcuſſed on the bill.

Suſpenſion, when competent.

7. Though he, in whoſe favour the decree ſuſpended is pronounced, be always called the charger, yet a decree may be ſuſpended before a charge be given on it. Nay, ſuſpenſion is competent even where there is no decree, for putting a ſtop to any illegal act whatſoever: thus, a building, or the exerciſe of a power which one aſſumes unwarrantably, is a proper ſubject of ſuſpenſion. Letters of ſuſpenſion are conſidered merely as a prohibitory diligence; ſo that the ſuſpender, if he would turn provoker, muſt bring an action of reduction. If, upon diſcuſſing the letters of ſuſpenſion, the reaſons ſhall be ſuſtained, a decree is pronounced, ſuſpending the letters of diligence on which the charge was given *ſimpliciter*; which is called a *decree of ſuſpenſion*, and takes off the effect of the decree ſuſpended. If the reaſons of ſuſpenſion be repelled, the court find the letters of diligence orderly proceeded, *i. e.* regularly carried on; and they ordain them to be put to farther execution.

Extraction of decrees.

8. Decrees are carried into execution, by diligence, either againſt the perſon or againſt the eſtate of the debtor. The firſt ſtep of perſonal execution is by letters of horning, which paſs by warrant of the court of ſeſſion, on the decrees of magiſtrates of boroughs, ſheriffs, admirals, and commiſſaries. If the debtor does not obey the will of the letters of horning within the days of the charge, the charger, after denouncing him rebel, and regiſtering the horning, may apply for letters of caption, which contain a command, not only to meſſengers, but to magiſtrates, to apprehend and impriſon the debtor. All meſſengers and magiſtrates, who refuſe their aſſiſtance in executing the caption, are liable *ſubſidiariè* for the debt; and ſuch ſubſidiary action is ſupported by the execution of the meſſenger employed by the creditor, expreſſing that they were charged to concur, and would not. Letters of caption contain an expreſs warrant to the meſſenger, in caſe he cannot get acceſs, to break open all doors and other lock-faſt places.

What perſons ſecured againſt caption.

9. Law ſecures peers, married women, and pupils, againſt perſonal execution by caption upon civil debts. Such commoners alſo as are elected to ſerve in parliament, are ſecured againſt perſonal execution by the privilege of parliament. No caption can be executed againſt a debtor within the precincts of the king's palace of Holyroodhouſe: but this privilege of ſanctuary afforded no ſecurity to criminals, as that did which was, by the canon law, conferred on churches and religious houſes. Where the perſonal preſence of a debtor, under caption, is neceſſary in any of the ſupreme courts, the judges are empowered to grant him a protection, for ſuch time as may be ſufficient for his coming and going, not exceeding a month. Protection from diligence is alſo granted by the court of ſeſſion under the late bankrupt ſtatute, where it is applied for, with concurrence of the truſtee, or a certain number of the creditors as the caſe may require.

Priſoners muſt be chiefly confined.

10. After a debtor is impriſoned, he ought not to be indulged the benefit of the air, not even under a guard; for creditors have an intereſt, that their debtors be kept under cloſe confinement, that, by the *ſqualor carceris*, they may be brought to pay their debt: and any magiſtrate or jailor, who ſhall ſuffer the priſoner to go abroad, without a proper atteſtation, upon oath, of the dangerous ſtate of his health, is liable *ſubſidiariè* for the debt. Magiſtrates are in like manner liable, if they ſhall ſuffer a priſoner to eſcape through the inſufficiency of their priſon: but, if he ſhall eſcape under night, by the uſe of inſtruments, or by open force, or by any other accident which cannot be imputed to the magiſtrates or jailor, they are not chargeable with the debt; provided they ſhall have, immediately after his eſcape, made all poſſible ſearch for him. A caſe lately occurred where a meſſenger having apprehended a perſon for a debt, upon letters of caption, delivered him over to the provoſt of the burgh, and took a receipt for him. The provoſt allowed him to remain at the inn all night, and afterwards allowed him what is called *open gaol*, by which he had acceſs to the court-houſe, under the ſame roof with the priſon, where he tranſacted buſineſs. As the perſon at whoſe inſtance he was apprehended upon the caption, conſidered that the magiſtrates had not kept the debtor in priſon as commanded by the letter, brought an action againſt them for the debt, although the debtor had not ſo much as attempted to make his eſcape. It was contended by the magiſtrates, that they were not liable, having only followed the uſual practice of the burgh: but the court of ſeſſion, conſidering the magiſtrates as principal keepers of the priſon, and as ſuch having no diſcretionary power, were of opinion, that the debtor had never been impriſoned in the eye of law, and therefore found the magiſtrates liable; and their judgment was affirmed upon appeal. Regularly, no priſoner for debt upon letters of caption, though he ſhould have made payment, could be releaſed without letters of ſuſpenſion, containing a charge to the jailor to ſet him at liberty, becauſe the creditor's diſcharge could not take off the penalty incurred by the debtor for contempt of the king's authority: but to ſave unneceſſary expence to debtors in ſmall debts, jailors are empowered to let go priſoners where the debt does not exceed 200 merks Scots, upon production of a diſcharge, in which the creditor conſents to his releaſe.

Form of liberating a priſoner.

Liberation upon a *ceſſio bonorum*.

11. The law, for a conſideration of compaſſion, allows inſolvent debtors to apply for a releaſe from priſon upon a *ceſſio bonorum*, *i. e.* upon their making over to the creditors all their eſtate real and perſonal This muſt be inſiſted for by way of action, to which all the

creditors of the priſoner ought to be made parties. The priſoner muſt, in this action, which is cogniſable only by the court of ſeſſion, exhibit a particular inventory of his eſtate, and make oath that he has no other eſtate than is therein contained, and that he has made no conveyance of any part of it, ſince his impriſonment, to the hurt of his creditors. He muſt alſo make oath, whether he has granted any diſpoſition of his effects before his impriſonment, and condeſcend on the perſons to whom, and on the cauſe of granting it; that the court may judge, whether, by any colluſive practice, he has forfeited his claim to liberty.

not competent to delinquents.

12. A fraudulent bankrupt is not allowed this privilege; nor a criminal who is liable in any aſſythment or indemnification to the party injured or his executors, though the crime itſelf ſhould be extinguiſhed by a pardon. A diſpoſition granted on a *ceſſio bonorum* is merely in farther ſecurity to the creditors, not in ſatisfaction or *in ſolutum* of the debts. If, therefore, the debtor ſhall acquire any eſtate after his releaſe, ſuch eſtate may be attached by his creditors, as if there had been no *ceſſio*, except in ſo far as is neceſſary for his ſubſiſtence. Debtors, who are ſet free on a *ceſſio bonorum*, are obliged to wear a habit proper to dyvours or bankrupts. The lords are prohibited to diſpenſe with this mark of ignominy, unleſs, in the ſummons and proceſs of *ceſſio*, it be libelled, ſuſtained, and proved, that the bankruptcy proceeds from misfortune. And bankrupts are condemned to ſubmit to the habit, even where no ſuſpicion of fraud lies againſt them, if they have been dealers in an illicit trade.

Dyvour's habit.

13. Where a priſoner for debt declares upon oath, before the magiſtrate of the juriſdiction, that he has not wherewith to maintain himſelf, the magiſtrate may ſet him at liberty, if the creditor, in conſequence of whoſe diligence he was impriſoned, does not aliment him within ten days after intimation made for that purpoſe. But the magiſtrate may, in ſuch caſe, detain him in priſon, if the creditor chuſes to bear the burden of the aliment rather than releaſe him. The ſtatute authoriſing this releaſe, which is uſually called the *act of grace*, is limited to the caſe of priſoners for civil debts.

Aliment.

Act of grace.

Execution againſt the debtor's eſtate.

14. Decrees are executed againſt the moveable eſtate of the debtor by arreſtment or poinding; and againſt his heritable eſtate, by inhibition, or adjudication. If one be condemned, in a removing or other proceſs, to quit the poſſeſſion of lands, and refuſe, notwithſtanding a charge, letters of ejection are granted of courſe, ordaining the ſheriff to eject him, and to enter the obtainer of the decree into poſſeſſion. Where one oppoſes by violence the execution of a decree, or of any lawful diligence, which the civil magiſtrate is not able by himſelf and his officers to make good, the execution is enforced *vanu militari*.

Decrees arbitral.

15. A decree arbitral, which is a ſentence proceeding on a ſubmiſſion to arbiters, has ſome affinity with a judicial ſentence, though in moſt reſpects the two differ. A ſubmiſſion is a contract entered into by two or more parties who have diſputable rights or claims, whereby they refer their differences to the final determination of an arbiter or arbiters, and oblige themſelves to acquieſce in what ſhall be decided. Where the day within which the arbiters are to decide, is left blank in the ſubmiſſion, practice has limited the arbiters power of deciding to a year. As this has proceeded from the ordinary words of ſtyle, empowering the arbiters to determine betwixt and the day of next to come; therefore, where a ſubmiſſion is indefinite, without ſpecifying any time, like all other contracts or obligations, it ſubſiſts for 40 years. Submiſſions, like mandates, expire by the death of any of the parties-ſubmitters before ſentence. As arbiters are not veſted with juriſdiction, they cannot compel witneſſes to make oath before them, or havers of writings to exhibit them; but this defect is ſupplied by the court of ſeſſion, who, at the ſuit of the arbiters, or of either of the parties, will grant warrant for citing witneſſes, or for the exhibition of writings. For the ſame reaſon, the power of arbiters is barely to decide; the execution of the decree belongs to the judge. Where the ſubmitters conſent to the regiſtration of the decree-arbitral, performance may be enforced by ſummary diligence.

Submiſſion.

Powers of arbiters.

17. The power of arbiters is wholly derived from the conſent of parties. Hence where their powers are limited to a certain day, they cannot pronounce ſentence after that day. Nor can they ſubject parties to a penalty higher than that which they have agreed to in the ſubmiſſion. And where a ſubmiſſion is limited to ſpecial claims, ſentence pronounced on ſubjects not ſpecified in the ſubmiſſion is null, as being *ultra vires compromiſſi*.

Decrees arbitral, how far reducible.

17. But on the other hand, as ſubmiſſions are deſigned for a moſt favourable purpoſe, the amicable compoſing of differences, the powers thereby conferred on arbiters receive an ample interpretation. Decrees-arbitral are not reducible upon any ground, except corruption, bribery, or falſehood.

Sect. IV. *Of Crimes.*

clxxxvi.

Crimes, public, and private.

The word *crime*, in its moſt general ſenſe, includes every breach either of the law of God or of our country; in a more reſtricted meaning, it ſignifies ſuch tranſgreſſions of law as are puniſhable by courts of juſtice. Crimes were, by the Roman law, divided into public and private. Public crimes were thoſe that were expreſsly declared ſuch by ſome law or conſtitution, and which, on account of their more atrocious nature and hurtful conſequences, might be proſecuted by any member of the community. Private crimes could be purſued only by the party injured, and were generally puniſhed by a pecuniary fine to be applied to his uſe. By the law of Scotland, no private party, except the perſon injured, or his next of kin, can accuſe criminally: but the king's advocate, who in this queſtion repreſents the community, has a right to proſecute all crimes *in vindictam publicam*, though the party injured ſhould refuſe to concur. Smaller offences, as petty riots, injuries, &c. which do not demand the public vengeance, paſs generally by the appellation of *delicts*, and are puniſhed either by fine or impriſonment.

What eſſential to crimes.

2. The eſſence of a crime is, that there be an intention in the actor to commit; for an action in which the will of the agent has no part, is not a proper object either of rewards or puniſhments: hence ariſes the rule *crimen dolo contrahitur*. Simple negligence does not therefore conſtitute a proper crime. Yet where it is extremely groſs, it may be puniſhed arbitrarily. Far leſs can we reckon in the number of crimes, thoſe com-

mitted by an idiot or furious perſon: but leſſer degrees of fatuity, which only darken reaſon, will not afford a total defence, though they may ſave from the *pœna ordinaria*. Actions committed in drunkenneſs are not to be conſidered as involuntary, ſeeing the drunkenneſs itſelf, which was the firſt cauſe of the action, is both voluntary and criminal.

3. On the ſame principle, ſuch as are in a ſtate of infancy, or in the confines of it, are incapable of a criminal action, dole not being incident to the age; but the preciſe age at which a perſon becomes capable of dole, being fixed neither by nature nor by ſtatute, is by practice to be gathered by the judge, as he beſt can, from the underſtanding and manners of the perſon accuſed. Where the guilt of a crime ariſes chiefly from ſtatute, the actor, if he is under puberty, can hardly be found guilty; but, where nature itſelf points out its deformity, he may, if he is *proximus pubertati*, be more eaſily preſumed capable of committing it: yet, even in that caſe, he will not be puniſhed *pœna ordinaria*.

Acceſſories, or art and part,

4. One may be guilty of a crime, not only by perpetrating it himſelf, but being acceſſory to a crime committed by another; which laſt is by civilians ſtyled *ope et conſilio*, and, in the law-phraſe *art and part*. A perſon may be guilty, art and part, either by giving advice or council to commit the crime; or, 2. By giving warrant or mandate to commit it; or, 3. By actually aſſiſting the criminal in the execution. It is generally agreed by doctors, that, in the more atrocious crimes, the adviſer is equally puniſhable with the criminal; and that, in the ſlighter, the circumſtances ariſing from the adviſer's leſſer age, the jocular or careleſs manner of giving advice, &c. may be received as pleas for ſoftening the puniſhment. One who gives mandate to commit a crime, as he is the firſt ſpring of action, ſeems more guilty than the perſon employed as the inſtrument in executing it; yet the actor cannot excuſe himſelf under the pretence of orders which he ought not to have obeyed.

5. Aſſiſtance may be given to the committer of a crime, not only in the actual execution, but previous to it, by furniſhing him, intentionally, with poiſon, arms, or the other means of perpetrating it. That ſort of aſſiſtance which is not given till after the criminal act, and which is commonly called *abetting*, though it be of itſelf criminal, does not infer art and part of the principal crime; as if one ſhould favour the eſcape of a criminal knowing him to be ſuch, or conceal him from juſtice.

Puniſhment of crimes.

6. Thoſe crimes that are in their conſequences moſt hurtful to ſociety, are puniſhed capitally, or by death; others eſcape with a leſſer puniſhment, ſometimes fixed by ſtatute, and ſometimes arbitrary, *i. e.* left to the diſcretion of the judge, who may exerciſe his juriſdiction, either by fine, impriſonment, or a corporal puniſhment. Where the puniſhment is left, by law, to the diſcretion of the judge, he can in no caſe extend it to death. The ſingle eſcheat of the criminal falls on conviction, in all capital trials, though the ſentence ſhould not expreſs it.

Blaſphemy

7. Certain crimes are committed more immediately againſt god himſelf; others, againſt the ſtate; and a third kind, againſt particular perſons. The chief crime in the firſt claſs, cogniſable by temporal courts, is *blaſphemy*, under which may be included *atheiſm*. This crime conſiſts in the denying or viliſying the Deity, by ſpeech or writing. All who curſe God or any of the perſons of the bleſſed Trinity, are to ſuffer death, even for a ſingle act; and thoſe who deny him, if they perſiſt in their denial. The denial of a Providence, or of the authority of the holy Scriptures, is puniſhable capitally for the third offence.

8. No proſecution can now be carried on for witchcraft or conjuration. But all who undertake, from their ſkill in any occult ſcience, to *tell fortunes, or diſcover ſtolen goods*, are to ſuffer impriſonment for a year, ſtand in the pillory four times in that year, and find ſurety for their future good behaviour.

Treaſon.

9. Some crimes againſt the ſtate are levelled directly againſt the ſupreme power, and ſtrike at the conſtitution itſelf: others diſcover ſuch a contempt of law, as tends to baffle authority, or ſlacken the reins of government. *Treaſon, crimen majeſtatis*, is that crime which is aimed againſt the majeſty of the ſtate; and can be committed only by thoſe who are ſubjects of that ſtate either by birth or reſidence. Soon after the union of the two kingdoms in 1707, the laws of treaſon, then in force in England, were extended to Scotland by 7 *Ann. c.* 21. both with regard to the facts conſtituting that crime, to the forms of trial, the corruption of blood, and all the penalties and forfeitures conſequent on it.

10. [illegible] is high treaſon, by the law of England, to imagine the death of the King, Queen-conſort, or of the heir apparent of the crown; to levy war againſt the King, or adhere to his enemies; to counterfeit the king's coin, or his great or privy ſeal; to kill the chancellor, treaſurer, or any of the 12 judges of England, while they are doing their offices: which laſt article is by the forenamed act 7 *Ann.* applied to Scotland, in the caſe of ſlaying any judge of the ſeſſion or of juſticiary ſitting in judgment. Thoſe who waſh, clip, or lighten, the proper money of the realm; who adviſedly affirm by writing or printing, that the Pretender has any right to the crown, that the king and parliament cannot limit the ſucceſſion to it, or who hold correſpondence with the Pretender, or any perſon employed by him, are alſo guilty of treaſon.

Pains of treaſon.

11. The forms of proceeding in the trial of treaſon, whether againſt peers or commoners, are ſet forth in a ſmall treatiſe, publiſhed by order of the houſe of lords in 1709, ſubjoined to a collection of ſtatutes concerning treaſon. By the conviction upon this trial, the whole eſtate of the traitor forfeits to the crown. His blood is alſo corrupted, ſo that, on the death of an anceſtor, he cannot inherit; and the eſtate which he cannot take, falls to the immediate ſuperior as eſcheat, *ob defectum heredis*, without diſtinguiſhing whether the lands hold of the crown, or of a ſubject. No attainder for treaſon ſhall after the death of the Pretender and all his ſons, hurt the right of any perſon, other than that of the offender, during his natural life; the rights of creditors and other third parties, in the caſe of forfeiture on treaſon, muſt be determined by the law of England.

Miſpriſion of treaſon.

12. *Miſpriſion of treaſon*, from *meprendre* is the overlooking or concealing of treaſon. It is inferred by one's bare knowledge of the crime, and not diſcovering it to a magiſtrate or other perſon intitled by his

office to take examination; though he ſhould not in the leaſt degree aſſent to it. The foreſaid act 7 *Ann.* makes the Engliſh Law of miſpriſion apply. Its puniſhment is, by the law of England, perpetual impriſonment, together with the forfeiture of the offender's moveables, and of the profits of his heritable eſtate, during his life; that is, in the ſtyle of the law, his ſingle and liferent eſcheat.

Sedition.

13. The crime of *ſedition* conſiſts in the raiſing commotions or diſturbances in the ſtate. It is either verbal or real. Verbal ſedition, or leaſing making, is inferred from the utterring of words tending to create diſcord between the king and his people. It is puniſhed either by impriſonment, fine or baniſhment, at the diſcretion of the judge. Real ſedition is generally committed by convocating together any conſiderable number of people, without lawful authority, under the pretence of redreſſing ſome public grievance, to the diſturbance of the public peace. Thoſe who are convicted of this crime are puniſhed by the confiſcation of their goods; and their lives are at the king's will. If any perſons, to the number of 12, ſhall aſſemble, and being required by a magiſtrate or conſtable to diſperſe, ſhall nevertheleſs continue together for an hour after ſuch command, the perſons diſobeying ſhall ſuffer death and confiſcation of moveables.

Corruption in judges.

14. Judges, who, wilfully or through corruption, uſe their authority as a cover to injuſtice or oppreſſion, are puniſhed with the loſs of honour, fame, and dignity. Under this head may be claſſed *theſtbote* (from *bote*, "compenſation"), which is the taking a conſideration in money or goods from a thief to exempt him from puniſhment, or connive at his eſcape from juſtice. A ſheriff or other judge, guilty of this crime, forfeits his life and goods. And even a private perſon, who takes theſtbote, ſuffers as the principal thief. The buying of diſputed claims, concerning which there is a pending proceſs, by any judge or member either of the ſeſſion or of an inferior court, is puniſhed by the loſs of the delinquent's office, and all the privileges thereto belonging.

Deforcement.

15. Deforcement is the oppoſition given, or reſiſtance made, to meſſengers or other officers, while they are employed in executing the law. The court of ſeſſion is competent to this crime. It is puniſhable with the confiſcation of moveables, the one half to the king, and the other to the creditor at whoſe ſuit the diligence was uſed. Armed perſons, to the number of three or more, aſſiſting in the illegal running, landing, or exporting of prohibited or uncuſtomed goods, or any who ſhall reſiſt, wound, or maim any officer of the revenue, in the execution of his office, are puniſhable with death and the confiſcation of moveables.

Breach of arreſtment.

16. *Breach of arreſtment* (ſee N° lxxviii. 5.) is a crime of the ſame nature with deforcement, as it imports a contempt of the law and of the judges. It ſubjects to an arbitrary corporal puniſhment, and the eſcheat of moveables: with a preference to the creditor for his debt, and for ſuch farther ſum as ſhall be modified to him by the judge. Under this head of crimes againſt good government and police, may be reckoned the *foreſtalling of markets*; that is, the buying of goods intended for a public market, before they are carried there; which for the third criminal act infers the eſcheat of moveables; as alſo ſlaying ſalmon in forbidden time, deſtroying plough graith in time of tillage, ſlaying or houghing horſes or cows in time of harveſt, and deſtroying or ſpoiling growing timber; as to the puniſhment of which, ſee ſtatutes 1503, *c.* 72. —1587, *c.* 82. and 1689, *c.* 16.—1 *Geo.* I. *St.* 2. *c.* 48.

Foreſtalling, &c.

Murder.

17. Crimes againſt particular perſons may be directed either againſt life, limb, liberty, chaſtity, goods, or reputation. *Murder* is the wilful taking away of a perſon's life, without a neceſſary cauſe. The law makes no diſtinction betwixt premediated and ſudden homicide: both are puniſhed capitally. Caſual homicide, where the actor is in ſome degree blameable; and homicide in ſelf-defence, where the juſt bounds of defence have been exceeded; are puniſhed arbitrarily: but the ſlaughter of night-thieves, houſe-breakers, aſſiſtants in maſterful depredations, or rebels denounced for capital crimes, may be committed with impunity. The crime of *demembration*, or the cutting off of a member, is joined with that of murder; but in practice, its puniſhment has been reſtricted to the eſcheat of moveables, and an aſſythment or indemnification to the party. *Mutilation*, or the diſabling of a member, is puniſhed at the diſcretion of the judge.

Self-murder.

18. *Self-Murder* is as highly criminal as the killing our neighbour; and for this reaſon, the law has, contrary to the rule *crimina morte extinguuntur*, allowed a proof of the crime, after the offender's death, that his ſingle eſcheat might fall to the king or his donatory. To this end, an action muſt be brought, not before the juſticiary, but the ſeſſion, becauſe it is only intended *ad civilem effectum*, for proving and declaring the ſelf-murder; and the next of kin to the deceaſed muſt be made party to it.

Parricide.

19. The puniſhment of parricide, or of the murder of a parent, is not confined, by the law, to the criminal himſelf. All his poſterity in the right line are declared incapable of inheriting; and the ſucceſſion devolves on the next collateral heir. Even the curſing or beating of a parent infers death, if the perſon guilty be above 16 years: and an arbitrary puniſhment, if he is under it. A preſumptive or ſtatutory murder is conſtituted by 1690, *c.* 21. by which any woman who ſhall conceal her pregnancy, during its whole courſe, and ſhall not call for, or make uſe of, help in the birth, is to be reputed the murderer, if the child be dead, or amiſſing. This act was intended to diſcourage the unnatural practice of women making away with their children begotten in fornication, to avoid church-cenſures.

Duelling.

20. *Duelling*, is the crime of fighting in ſingle combat, on previous challenges given and received. Fighting in a duel, without licences from the king, is puniſhable by death; and whatever perſon, principal or ſecond, ſhall give a challenge to fight a duel, or ſhall accept a challenge, or otherwiſe engage therein, is puniſhed by baniſhment and eſcheat of moveables, though no actual fighting ſhould enſue.

Haimſucken.

21. *Haimſucken* (from *haim* "home," and *ſocken* "to ſeek or purſue.") is the aſſaulting or beating of a perſon in his own houſe. The puniſhment of this crime is nowhere defined, except in the books of the Majeſty, which make it the ſame as that of a rape; and it is, like rape, capital by practice. The aſſault muſt be made in the proper houſe of the perſon aſſaulted,

where he lies and riſes daily and nightly ; ſo that neither a public houſe, nor even a private, where one is only tranſiently, falls within the law.

Battery.

22. Any party to a law-ſuit, who ſhall ſlay, wound, or otherwiſe invade his adverſary, at any period of time between executing the ſummons and the complete execution of the decree, or ſhall be acceſſory to ſuch invaſion, ſhall loſe his cauſe. The ſentence pronounced on this trial, againſt him who has committed the battery, is not ſubject to reduction, either on the head of minority, or on any other ground whatever: and if the perſon proſecuted for this crime ſhall be denounced for not appearing, his liferent, as well as ſingle eſcheat, falls upon the denunciation.

Wrongous impriſonment.

23. The crime of *wrongous impriſonment* is inferred, by granting warrants of commitment in order to trial, proceeding on informations not ſubſcribed, or without expreſſing the cauſe of commitment; by receiving or detaining priſoners on ſuch warrants; by refuſing to a priſoner a copy of the warrant of commitment; by detaining him in cloſe confinement, above eight days after his commitment; by not releaſing him on bail, where the crime is bailable; and by tranſporting perſons out of the kingdom, without either their own conſent, or a lawful ſentence. The perſons guilty of a wrongous impriſonment are puniſhed by a pecuniary mulct, from L. 6000 down to L. 400 *Scots*, according to the rank of the perſon detained; and the judge, or other perſon guilty, is over and above ſubjected to pay to the perſon detained a certain ſum *per diem*, proportioned to his rank, and is declared incapable of public truſt. All theſe penalties may be inſiſted for by a ſummary action before the ſeſſion, and are ſubject to no modification.

Adultery.

24. *Adultery*, is the crime by which the marriage-bed is polluted. This crime could neither by the Roman nor Jewiſh law be committed, but where the guilty woman was the wife of another: by ours, it is adultery, if either the man or woman be married. We diſtinguiſh between ſimple adultery, and that which is notorious or manifeſt. Open and manifeſt adulterers, who continue incorrigible, notwithſtanding the cenſures of the church, are puniſhed capitally. This crime is diſtinguiſhed by one or other of the following characters: where there is iſſue procreated between the adulterers; or where they keep bed and company together notoriouſly; or where they give ſcandal to the church, and are upon their obſtinate refuſing to liſten to its admonitions, excommunicated. The puniſhment of ſimple adultery, not being defined by ſtatute, is left to the diſcretion of the judge; but cuſtom has made the falling of the ſingle eſcheat one of its penalties.

Bigamy.

25. *Bigamy*, is a perſons entering into the engagements of a ſecond marriage, in violation of a former marriage-vow ſtill ſubſiſting. Bigamy, on the part of the man, has been tolerated in many ſtates, before the eſtabliſhment of Chriſtianity, even by the Jews themſelves; but it is prohibited by the precepts of the goſpel, and it is puniſhed by the law, whether on the part of the man or of the woman, with the pains of perjury.

Inceſt.

26. *Inceſt*, is committed by perſons who ſtand within the degrees of kindred forbidden in *Lev.* xvii. and is puniſhed capitally. The ſame degrees are prohibited in affinity, as in conſanguinity, *Lev.* xviii. 13. *et ſeq.* As this crime is repugnant to nature, all children, whether lawful or natural, ſtand on an equal footing: *civilis ratio civilia jura corrumpere poteſt, non vero naturalia.* It is difficult indeed to bring a legal proof of a relation merely natural, on the ſide of the father; but the mother may be certainly known without marriage.

Rape.

27. There is no explicit ſtatute making rape, or the raviſhing of women, capital; but it is plainly ſuppoſed in act 1612. *c.* 4. by which the raviſher is exempted from the pains of death, only in the caſe of the woman's ſubſequent conſent, or her declaration that ſhe went off with him of her own free-will; and even then, he is to ſuffer an arbitrary puniſhment, either by impriſonment, confiſcation of goods, or a pecuniary fine.

Theft.

28. *Theft* is defined, A fraudulent intermeddling with the property of another, with a view of making gain. The ancient law proportioned the puniſhment of the theft to the value of the goods ſtolen; heightening it gradually, from a ſlight corporal puniſhment to a capital, if the value amounted to thirty-two pennies Scots, which in the reign of David I. was the price of two ſheep. In ſeveral latter acts, it is taken for granted, that this crime is capital. But where the thing ſtolen is of ſmall value, we conſider it not as theft but as pickery, which is puniſhed either corporally or by baniſhment. The breaking of orchards, and the ſtealing of green wood, is puniſhed by a fine, which riſes as the crime is repeated.

Reſet of theft.

29. Theft may be aggravated into a capital crime, though the value of the thing ſtolen be trifling; as theft twice repeated, or committed in the night, or by landed men; or of things ſet apart for ſacred uſes. The receivers and concealers of ſtolen goods, knowing them to be ſuch, ſuffer as thieves. Thoſe who barely harbour the perſon of the criminal within 48 hours either before or after committing the crime, are puniſhed as partakers of the theft. Such as ſell goods belonging to thieves or lawleſs perſons who dare not themſelves come to market, are puniſhed with baniſhment and the eſcheat of moveables.

Robbery, &c.

30. Theft attended with violence is called *robbery*; and in the old ſtatutes, *rief* or *ſtouthrief*; under which claſs may be included *ſorning*, or the taking of meat and drink by force, without paying for it. Stouthrief came at laſt to be committed ſo audaciouſly, by bands of men aſſociated together, that it was thought neceſſary to veſt all the freeholders with a power of holding courts upon ſorners and rievers, and condemning them to death. Nay, all were capitally puniſhed, who, to ſecure their lands from depredation, payed to the rievers a yearly contribution, which got the name of *black-mail.* An act alſo paſſed, commanding to baniſhment a band of ſorners, who were originally from *Egypt* called *gypſies*, and adjudging to death all that ſhould be reputed *Egyptians*, if found thereafter within the kingdom. Robbery committed on the ſeas is called *piracy*, and is puniſhed capitally by the high admiral. Several of the facts which conſtitute this crime are ſet forth in a Britiſh ſtatute, 8 *Geo. I. c.* 24.

Falſehood.

31. *Falſehood*, in a large ſenſe, is the fraudulent imitation or ſuppreſſion of truth, to the damage of another. The lives and goods of perſons convicted of uſing falſe weights or meaſures were, by the old law, in the king's

Forgery.

mercy; and their heirs could not inherit but upon a remiſſion. The lateſt ſtatute againſt this crime, puniſhes it by confiſcation of moveables. That particular ſpecies of falſehood, which conſiſts in the falſifying of writings, paſſes by the name of *forgery*. The practice has now of a long time, agreeably to the Roman law, made this crime capital; unleſs the forgery be of executions, or other writings of ſmaller moment; in which caſe, it is puniſhed arbitrarily.

32. The writing muſt not only be fabricated, but put to uſe or founded on, in order to infer this crime. And though it be ſtrictly criminal, yet the trial of it is proper to the court of ſeſſion; but where improbation is moved againſt a deed by way of exception, the inferior judge, before whom the action lies, is competent to it *ad civilem effectum*. When it is pleaded as an exception, the practice, to diſcourage affected delays, obliges the defender, who moves it, to conſign L. 40 Scots; which he forfeits, if his plea ſhall appear calumnious.

33. Where a perſon, found guilty of forgery by the court of ſeſſion, is by them remitted to the juſticiary, an indictment is there exhibited againſt him, and a jury ſworn, before whom the decree of ſeſſion is produced, in place of all other evidence of the crime, in reſpect of which the jury find the pannel guilty; ſo that that decree being pronounced by a competent court, is held as full proof, or, in the ſtyle of the bar, as *probatio probata*.

Perjury.

34. *Perjury*, which is the judicial affirmation of a falſehood on oath, really coſtitutes the *crimem falſi*; for he who is guilty of it does, in the moſt ſolemn manner, ſubſtitute falſehood in the place of truth. To conſtitute this crime, the violation of truth muſt be deliberately intended by the ſwearer; and therefore reaſonable allowances ought to be given to forgetfulneſs or miſapprehenſion, according to his age, health, and other circumſtances. The breach of a promiſſory oath, does not infer this crime; for he who promiſes on oath, may ſincerely intend performance when he ſwears, and ſo cannot be ſaid to call on God to atteſt a falſehood. Though an oath, however falſe, if made upon reference in a civil queſtion, concludes the cauſe, the perſon perjured is liable to a criminal trial; for the effect of the reference can go no further than the private right of the parties.

35. Nowithſtanding the miſchievous conſequences of perjury to ſociety, it is not puniſhed capitally, but by confiſcation of moveables, impriſonment for a year, and infamy. The court of ſeſſion is competent to perjury *incidenter*, when, in any examination upon oath, taken in a cauſe depending before them, a perſon appears to have ſworn falſely: but in the common caſe, that trial is proper to the juſticiary. *Subornation of perjury* conſiſts in tampering with perſons who are to ſwear in judgement, by directing them how they are to depoſe; and it is puniſhed with the pains of perjury.

Stellionate.

36. The crime of *ſtellionate* from *ſtellio*, includes every fraud which is not diſtinguiſhed by a ſpecial name; but is chiefly applied to conveyances of the ſame numerical right, granted by the proprietor to different diſponees. The puniſhment of ſtellionate muſt neceſſarily be arbitrary, to adapt it to the various natures and different aggravations of the fraudulent acts. The perſons guilty of that kind of it, which conſiſts in granting double conveyances, are by the law declared infamous, and their lives and goods at the king's mercy. The cogniſance of *fraudulent bankruptcy* is appropriated to the court of ſeſſion, who may inflict any puniſhment on the offender that appears proportioned to his guilt, death excepted.

Uſury.

37. The crime of *uſury*, before the reformation, conſiſted in the taking of *any* intereſt for the uſe of money; and now in taking an higher rate of intereſt than is authoriſed by law. It is divided into *uſura manifeſta*, or direct; and *velata*, or covered. One may be guilty of the firſt kind, either where he covenants with the debtor for more than the lawful intereſt on the loan-money: or where one receives the intereſt of a ſum before it is due, ſince thereby he takes a conſideration for the uſe of money before the debtor has really got the uſe of it. Where a debt is clogged with an uncertain condition, by which the creditor runs the hazard of loſing his ſum, he may covenant for an higher intereſt than the legal, without the crime of uſury; for there, the intereſt is not given merely in conſideration of the uſe of the money, but of the danger undertaken by the creditor.

38. Covered uſury, is that which is committed under the maſk not of a loan but of ſome other contract; *e. g.* a ſale or an improper wadſet. And in general, all obligations entered into with an intention of getting more than the legal intereſt for the uſe of money, however they may be diſguiſed, are uſurious. As a farther gaurd againſt this crime, the taking more than the legal intereſt for the forbearance of payment of money, merchandiſe, or other commodities, by way of loan, exchange, or other contrivance whatever, or the taking a bribe for the loan of money, or for delaying its payment when lent, is declared uſury. Where uſury is proved, the uſurious obligation is not only declared void, but the creditor, if he has received any unlawful profits, forfeits the treble value of the ſums or goods lent. Uſury, when it is to be purſued criminally, muſt be tried by the juſticiary; but where the libel concludes only for voiding the debt, or reſtitution, the ſeſſion is the proper court.

Injury.

39. *Injury*, in its proper acceptation, is the reproaching or affronting our neighbour. Injuries are either verbal or real. A verbal injury, when directed againſt a private perſon, conſiſts in the uttering contumelious words, which tend to expoſe our neighbour's character by making him little or ridiculous. It does not ſeem that the twitting one with natural defects, without any ſarcaſtical reflections, though it be inhuman, falls under this deſcription, as theſe imply no real reproach in the juſt opinion of mankind. Where the injurious expreſſions have a tendency to blacken one's moral character, or fix ſome particular guilt upon him, and are deliberately repeated in different companies, or handed about in whiſpers to confidents, it then grows up to the crime of ſlander: and where a perſon's moral character is thus attacked, the *animus injuriandi* is commonly inferred from the injurious words themſelves, unleſs ſpecial circumſtances be offered to take off the preſumption, *ex. gr.* that the words were uttered in judgment in one's own defence, or by way of information to a magiſtrate, and had ſome foundation in fact. Though the cognizance of ſlander is proper to the commiſſaries,

miſſaries, who, as the *judices Chriſtianitatis*, are the only judges of ſcandal; yet, for ſome time paſt, bare verbal injuries have been tried by other criminal judges, and even by the ſeſſion. It is puniſhed either by a fine, proportioned to the condition of the perſons injuring and injured, and the circumſtances of time and place; or if the injury import ſcandal, by publicly acknowledging the offence; and frequently the two are conjoined. The calling one a bankrupt is not, in ſtrict ſpeech, a verbal injury, as it does not affect the perſon's moral character; yet, as it may hurt his credit in the way of buſineſs, it founds him in an action of damages, which muſt be brought before the judge-ordinary. A real injury is inflicted by any fact by which a perſon's honour or dignity is affected; as ſtriking one with a cane, or even aiming a blow without ſtriking; ſpitting in one's face; aſſuming a coat of arms, or any other mark of diſtinction proper to another, &c. The compoſing and publiſhing defamatory libels may be reckoned of this kind. Real injuries are tried by the judge-ordinary, and puniſhed either by fine or impriſonment, according to the demerit of the offenders.

Criminal juriſdiction

40. After having ſhortly explained the ſeveral crimes puniſhable by the law, this treatiſe may be concluded with a few obſervations on criminal juriſdiction, the forms of trial, and the methods by which crimes may be extinguiſhed. Criminal juriſdiction is founded, 1. *Ratione domicilii*, if the defender dwells within the territory of the judge. Vagabonds, who have no certain *domicile*, may be tried wherever they are apprehended. 2. *Ratione delicti*, if the crime was committed within the territory. Treaſon is triable, by the Engliſh law, in any country that the king ſhould appoint; and, by a temporary act now expired, treaſon committed in certain Scots counties, was made triable by the court of juſticiary, wherever it ſhould ſit.

What perſons are not triable.

41. No criminal trial can proceed, unleſs the perſon accuſed is capable of making his defence. Abſents therefore cannot be tried; nor fatuous nor furious perſons, *durante furore*, even for crimes committed while they were in their ſenſes. For a like reaſon, minors who had no curators, could not, by the Roman law, be tried criminally; but preſent practice conſiders every perſon who is capable of dole, to be alſo ſufficiently qualified for making his defence in a criminal trial.

Commitment.

42. No perſon can be impriſoned in order to ſtand trial for any crime, without a warrant in writing expreſſing the cauſe, and proceeding upon a ſubſcribed information, unleſs in the caſe of indignities done to judges, riots, and the other offences ſpecially mentioned in 1701. *c*. 6. Every priſoner committed in order to trial, if the crime of which he is accuſed be not capital, is entitled to be releaſed upon bail, the extent of which is to be modified by the judge, not exceeding 12,000 merks Scots for a nobleman, 6000 for a landed gentleman, 2000 for every other gentleman or burgeſs, and 600 for any other inferior perſon. That perſons who, either from the nature of the crime with which they are charged, or from their low circumſtances, cannot procure bail, may not lie for ever in priſon untried, it is lawful for every ſuch priſoner to apply to the criminal judge, that his trial may be brought on. The judge muſt, within 24 hours after ſuch application, iſſue letters directed to meſſengers, for intimating to the proſecutor to fix a diet for the priſoner's trial, within 60 days after the intimation, under the pain of wrongous impriſonment: And if the perſecutor does not inſiſt within that time, or if the trial is not finiſhed in forty days more when carried on before the Juſticiary, or in thirty when before any other judge; the priſoner is, upon a ſecond application, ſetting forth that the legal time is elapſed, entitled to his freedom, under the ſame penalty.

Precognition.

43. Upon one's committing any of the groſſer crimes, it is uſual for a juſtice of the peace, ſheriff, or other judge, to take a precognition of the facts, *i. e.* to examine thoſe who were preſent at the criminal act, upon the ſpecial circumſtances attending it, in order to know whether there is ground for a trial, and to ſerve as a direction to the proſecutor, how to ſet forth the facts in the libel; but the perſons examined may inſiſt to have their declarations cancelled before they give teſtimony at the trial. Juſtices of the peace, ſheriffs, and magiſtrates of boroughs, are alſo authoriſed to receive informations, concerning crimes to be tried in the circuit-courts; which informations are to be tranſmitted to the juſtice-clerk 40 days before the ſitting of the reſpective courts. To diſcourage groundleſs criminal trials, all proſecutors, where the defender was abſolved, were condemned by ſtatute, in coſts, as they ſhould be modified by the judge, and beſides were ſubjected to a ſmall fine, to be divided between the fiſc and the defender: And where the king's advocate was the only purſuer, his informer was made liable. This ſufficiently warrants the preſent practice of condemning vexatious proſecutors in a pecuniary mulct, though far exceeding the ſtatutory ſum.

Form of trial.

44. The forms of trial upon criminal accuſations, differ much from thoſe obſerved in civil actions, if we except the caſe of ſuch crimes as the court of ſeſſion is competent to, and of leſſer offences tried before inferior courts. The trial of crimes proceeds either upon indictment, which is ſometimes uſed when the perſon to be tried is in priſon; or by criminal letters iſſuing from the ſignet of the juſticiary. In either caſe, the defender muſt be ſerved with a full copy of the indictment or letters, and with a liſt of the witneſſes to be brought againſt him, and of the perſons who are to paſs on the inqueſt, and 15 free days muſt intervene between his being ſo ſerved and the day of appearance. When the trial proceeds upon criminal letters, the private proſecutor muſt give ſecurity, at raiſing the letters, that he will report them duly executed to the juſticiary, in terms of 1535, *c*. 35.; and the defender, if he be not already in priſon, is, by the letters, required to give caution, within a certain number of days after his citation, for his appearance upon the day fixed for his trial: And if he gives none within the days of the charge, he may be denounced rebel, which infers the forfeiture of his moveables.

45. That part of the indictment, or of the criminal letters, which contains the ground of the charge againſt the defender, and the nature or degree of the puniſhment he ought to ſuffer, is called the *libel*. All libels muſt be ſpecial, ſetting forth the particular facts inferring the guilt, and the particular place where

theſe facts were done. The time of committing the crime may be libelled in more general terms, with an alternative as to the month, or day of the month: but as it is not practicable, in moſt caſes, to libel upon the preciſe circumſtances of acceſſion that may appear in proof, libels againſt acceſſories are ſufficient, if they mention, in general, that the perſons proſecuted are guilty art and part.

46. The defender in a criminal trial may raiſe letters of exculpation, for citing witneſſes in proof of his defences againſt the libel, or of his objections againſt any of the jury or witneſſes; which muſt be executed to the ſame day of appearance with that of the indictment or criminal letters.

Diets of appearance

47. The diets of appearance, in the court of juſticiary, are peremptory: the criminal letters muſt be called on the very day to which the defender is cited; and hence, if no accuſer appears, their effect is loſt, *inſtantia perit*, and new letters muſt be raiſed. If the libel, or any of the executions, ſhall to the proſecutor appear informal, or if he be diffident of the proof, from the abſconding of a neceſſary witneſs, the court will, upon a motion made by him, deſert the diet *pro loco et tempore*; after which new letters become alſo neceſſary. A defender, who does not appear on the very day to which he is cited, is declared fugitive; in conſequence of which, his ſingle eſcheat falls. The defender, after his appearance in court, is called the *pannel*.

48. The two things to be chiefly regarded in a criminal libel, are, 1. The relevancy of the facts, *i. e.* their ſufficiency to infer the concluſion; 2. Their truth. The conſideration of the firſt belongs to the judge of the court; that of the other, to the jury or aſſize. If the facts libelled be found irrelevant, the pannel is diſmiſſed from the bar; if relevant, the court remits the proof thereof to be determined by the jury; which muſt conſiſt of 15 men picked out by the court from a greater number not exceeding 45, who have been all ſummoned, and given in liſt to the defender at ſerving him with a copy of the libel.

Probation of crimes.

49. Crimes cannot, like debts, be referred to the defender's oath; for no perſon is compellable to ſwear againſt himſelf, where his life, limb, liberty, or eſtate is concerned, nor even in crimes which infer infamy; becauſe one's good name is, in right eſtimation, as valuable as his life. There is one exception however to this rule in trying the crime of uſury, which may be proved by the uſurer's own oath, notwithſtanding the rule, *Nemo tenetur jurare in ſuam turpitudinem*. Crimes therefore are in the general caſe proveable only by the defender's free confeſſion, or by writing, or by witneſſes. No extrajudicial confeſſion, unleſs it is adhered to by the pannel in judgement, can be admitted as evidence.

Socii criminis.

50. All objections relevant againſt a witneſs in civil caſes are alſo relevant in criminal. No witneſs is admitted, who may gain or loſe by the event of the trial. *Socii criminis*, or aſſociates in the ſame crime, are not admitted againſt one another, except either in crimes againſt the ſtate, as treaſon; in occult crimes, where other witneſſes cannot be had, as forgery, or in thefts or depradations committed in the Highlands. The teſtimony of the private party injured may be received againſt the pannel, where the king's advocate is the only proſecutor, if from the nature of the crime, there muſt needs be a penury of witneſſes, as in rape, robbery, &c.

Verdict of aſſiſe.

51. After all the witneſſes have been examined in court, the jury are ſhut up in a room by themſelves, where they muſt continue, excluded from all correſpondence, till their verdict or judgment be ſubſcribed by the foreman (or chancellor) and clerk; and according to this verdict the court pronounces ſentence, either abſolving or condemning. It is not neceſſary, by the law of Scotland, that a jury ſhould be unanimous in finding a perſon guilty; the narroweſt majority is as ſufficient againſt the pannel, as for him. Juries cannot be puniſhed on account of an erroneous verdict, either for or againſt the pannel.

Powers of a jury.

52. Though the proper buſineſs of a jury be to inquire into the truth of the facts found relevant by the court, for which reaſon they are ſometimes called the *inqueſt*; yet, in many caſes, they judge alſo in matters of law or relevancy. Thus, though an objection againſt a witneſs ſhall be repelled by the court, the jury are under no neceſſity to give more credit to his teſtimony than they think juſt: And in all trials of art and part, where ſpecial facts are not libelled, the jury, if they return a general verdict, are indeed judges not only of the truth, but of the relevancy of the facts that are ſworn to by the witneſſes. A general verdict, is that which finds in general terms, that the pannel is guilty or not guilty, or that the libel or defences are proved or not proved. In a ſpecial verdict, the jury finds certain facts proved, the import of which is to be afterwards conſidered by the court.

Sentences.

53. Criminal judges muſt now ſuſpend for ſome time the execution of ſuch ſentences as affect life or limb, that ſo condemned criminals, whoſe caſes deſerve favour, may have acceſs to apply to the king for mercy. No ſentence of any court of judicature, ſouth of the river Forth, importing either death or demembration, can be executed in leſs than 30 days; and, if north of it, in leſs than 40 days, after the date of the ſentence. But corporal puniſhments, leſs than death or diſmembering, *e. g.* whipping, pillory, *&c.* may be inflicted eight days after ſentence on this ſide Forth, and twelve days after ſentence beyond it.

Extinction of crimes.

54. Crimes are extinguiſhed, 1. By the death of the criminal: both becauſe a dead perſon can make no defence, ſo that his trial is truly a judging upon the hearing of one ſide; and becauſe, though his guilt ſhould be ever ſo notorious, he is after death carried beyond the reach of human penalties: Such trials therefore can have no effect, but to puniſh the innocent heir, contrary to that moſt equitable rule, *Culpa tenet ſuos auctores*. 2. Crimes may be extinguiſhed by a remiſſion from the ſovereign. But a remiſſion, tho' it ſecures the delinquent from the public reſentment, the exerciſe of which belongs to the crown, cannot cut off the party injured from his claim of damages, over which the crown has no prerogative. Whoever therefore founds on a remiſſion, is liable in damages, to the private proſecutor, in the ſame manner as if he had been tried and found guilty. Even general acts of indemnity paſſed in parliament, though they ſecure againſt ſuch penalties as law inflicts upon the criminal merely *per modum pœnæ*, yet do not againſt the payment of any pecuniary fine that is given by ſtatute.

to the party injured, nor againſt the demand of any claim competent to him in name of damages.

55. Leſſer injuries, which cannot be properly ſaid to affect the public peace, may be extinguiſhed, either by the private party's expreſsly forgiving him, or by his being reconciled to the offender, after receiving the injury. Hence ariſes the rule, *Diſſimulatione tollitur injuria*. But where the offence is of a higher nature, the party injured, though he may paſs from the proſecution, in ſo far as his private intereſt is concerned, cannot preclude the king's advocate, or procurator-fiſcal, from inſiſting *ad vindictam publicam*.

Preſcription.

56. Crimes are alſo extinguiſhed by preſcription, which operates by the mere lapſe of time, without any act either of the ſovereign or of the private ſufferer. Crimes preſcribe in 20 years; but in particular crimes, the preſcription is limited by ſtatute to a ſhorter time. No perſon can be proſecuted upon the act againſt wrongous impriſonment, after three years. High treaſon, committed within the king's dominions, ſuffers likewiſe a triennial preſcription, if indictment be not found againſt the traitor within that time. All actions brought upon any penal ſtatute made or to be made, where the penalty is appropriated to the crown, expire in two years after committing the offence; and where the penalty goes to the crown or other proſecutor, the proſecutor muſt ſue within one year, and the crown within two years after the year ended. Certain crimes are, without the aid of any ſtatute, extinguiſhed by a ſhorter preſcription than twenty years. By the old law, in the caſe of rape, robbery, and hameſucken, the party injured was not heard after a ſilence of twenty-four hours; from a preſumption, that perſons could not be ſo groſsly injured, without immediately complaining: And it is probable, that a proſecution for theſe crimes, if delayed for any conſiderable time, would be caſt even at this day, or at leaſt the puniſhment reſtricted. Leſſer injuries ſuffer alſo a ſhort preſcription; law *preſuming* forgiveneſs, from the nature of the offence, and the ſilence of the party. The particular ſpace of time ſufficient to eſtabliſh this preſumption muſt be determined by the judge, according to circumſtances.

LAW

Law-Language.

Law-Language. In England all law-proceedings were formerly written, as indeed all public proceedings were, in Norman or law French, and even the arguments of the counſel and deciſions of the court were in the ſame barbarous dialect. An evident and ſhameful badge, it muſt be owned, of tyranny and foreign ſervitude; being introduced under the auſpices of William the Norman, and his ſons: whereby the obſervation of the Roman ſatyriſt was once more verified, that *Gallia cauſidicos docuit facunda Brittannos*. This continued till the reign of Edward III.; who, having employed his arms ſucceſsfully in ſubduing the crown of France, thought it unbeſeeming the dignity of the victors to uſe any longer the language of a vanquiſhed country. By a ſtatute, therefore, paſſed in the 36th year of his reign, it was enacted, that for the future all pleas ſhould be pleaded, ſhown, defended, anſwered, debated, and judged, in the Engliſh tongue; but be entered and inrolled in Latin: In like manner as Don Alonſo X. king of Caſtile (the great-grandfather of Edward III.) obliged his ſubjects to uſe the Caſtilian tongue in all legal proceedings; and as, in 1286, the German language was eſtabliſhed in the courts of the empire. And perhaps, if the legiſlature had then directed that the writs themſelves, which are mandates from the king to his ſubjects to perform certain acts or to appear at certain places, ſhould have been framed in the Engliſh language, according to the rule of the ancient law, it had not been very improper. But the record or enrolment of thoſe writs and the proceedings thereon, which was calculated for the benefit of poſterity, was more ſerviceable (becauſe more durable) in a dead and immutable language than in any flux or living one. The practiſers, however, being uſed to the Norman language, and therefore imagining they could expreſs their thoughts more aptly and more conciſely in that than in any other, ſtill continued to take their notes in law French; and of courſe, when thoſe notes came to be publiſhed, under the denomination of *reports*, they were printed in that barbarous dialect; which joined to the additional terrors of a Gothic black letter, has occaſioned many a ſtudent to throw away his Plowden and Littleton, without venturing to attack a page of them. And yet in reality, upon a nearer acquaintance, they would have found nothing very formidable in the language; which differs in its grammar and orthography as much from the modern French, as the diction of Chaucer and Gower does from that of Addiſon and Pope. Beſides, as the Engliſh and Norman languages were concurrently uſed by our anceſtors for ſeveral centuries together, the two idioms have naturally aſſimilated, and mutually borrowed from each other: for which reaſon the grammatical conſtruction of each is ſo very much the ſame, that I apprehend an Engliſhman (with a week's preparation) would underſtand the laws of Normandy, collected in their *grand couſtumier*, as well, if not better, than a Frenchman bred within the walls of Paris.

Blackſt. Comment.

The Latin, which ſucceeded the French for the entry and enrolment of pleas, and which continued in uſe for four centuries, anſwers ſo nearly to the Engliſh (oftentimes word for word) that it is not at all ſurpriſing it ſhould generally be imagined to be totally fabricated at home, with little more art or trouble than by adding Roman terminations to Engliſh words. Whereas in reality it is a very univerſal dialect, ſpread throughout all Europe at the irruption of the northern nations; and particularly accommodated and moulded to anſwer all the purpoſes of the lawyers with a peculiar exactneſs and preciſion. This is principally owing to the ſimplicity, or (if the reader pleaſes) the poverty and baldneſs of its texture, calculated to expreſs the ideas of mankind juſt as they ariſe in the human mind, without any rhetorical flouriſhes, or perplexed ornaments of ſtyle: for it may be obſerved, that thoſe laws and ordinances, of public as well as private communities, are generally the moſt eaſily underſtood, where ſtrength and perſpicuity, not harmony or elegance of expreſſion, have been principally conſulted in compiling them. Theſe northern nations, or rather their legiſlators, though they reſolved to make uſe of the Latin tongue in promulging their laws, as being more durable and more generally known to their conquered ſubjects than their own Teutonic dialects, yet (either through choice or neceſſity) have frequently intermixed therein ſome words of a Gothic original; which is, more or leſs, the caſe in every country of Europe, and therefore not to be imputed as any peculiar blemiſh in the Engliſh legal latinity. The truth is, what is generally denominated *law-Latin* is in reality a mere technical language, calculated for eternal duration, and eaſy to be apprehended both in preſent and future times; and on thoſe accounts beſt ſuited to preſerve thoſe memorials which are intended for perpetual rules of action. The rude pyramids of Egypt have endured from the earlieſt ages, while the more modern and more elegant ſtructures of Attica, Rome, and Palmyra, have ſunk beneath the ſtroke of time.

As to the objection of locking up the law in a ſtrange and unknown tongue, this is of little weight with regard to records; which few have occaſion to read, but ſuch as do, or ought to, underſtand the rudiments of Latin. And beſides, it may be obſerved of the law-Latin, as the very ingenious Sir John Davis obſerves of the law-French, "that it is ſo very eaſy to be learned, that the meaneſt wit that ever came to the ſtudy of the law doth come to underſtand it almoſt perfectly in ten days without a reader."

It is true, indeed, that the many terms of art, with which the law abounds, are ſufficiently harſh when Latinized (yet not more ſo than thoſe of other ſciences), and may, as Mr Selden obſerves, give offence "to ſome grammarians of ſqueamiſh ſtomachs, who would rather chooſe to live in ignorance of things the moſt uſeful and important, than to have their delicate ears wounded by the uſe of a word unknown to Cicero, Salluſt, or the other writers of the Auguſtan age." Yet this is no more than muſt unavoidably happen when things of modern uſe, of which the Romans had no idea, and conſequently no phraſes to expreſs them, come to be delivered in the Latin tongue. It would puzzle the moſt claſſical ſcholar to find an appellation, in his pure Latinity, for a conſtable, a record, or a deed of feoffment: it is therefore to be imputed as much to neceſſity as ignorance, that they were ſtyled in the forenſic dialect, *conſtabularius*, *recordum*, and *feoffamentum*. Thus again, another uncouth word of the ancient laws (for I defend not the ridiculous barbariſms ſometimes introduced by the ignorance of modern practiſers), the ſubſtantive *murdrum*, or the verb *murdrare*, however harſh and unclaſſical it may ſeem, was neceſſarily framed to expreſs a particular offence; ſince no other word in being, *occidere*, *interficere*, *necare*, or the like, was ſufficient to expreſs the intention of the criminal, or *quo animo* the act was perpetrated; and therefore by no means came up to the notion of murder at preſent entertained by law; viz. a killing *with malice aforethought*.

A ſimilar neceſſity to this produced a ſimilar effect at Byzantium, when the Roman laws were turned into Greek for the uſe of the oriental empire: for, without any regard to Attic elegance, the lawyers of the imperial courts made no ſcruple to tranſlate *fidei commiſſarios*, φιδεικομμισσαριυς; *cubiculum*, κυβικȣλειον; *filium familias*, παιδα-φαμιλιας; *repudium*, ρεπȣδιον; *compromiſſum*, κομπρομισσον; *reverentia et obſequium*, ρευερεντια και οψεκȣιον; and the like. They ſtudied more the exact and preciſe import of the words, than the neatneſs and delicacy of their cadence. And it may be ſuggeſted, that the terms of the law are not more numerous, more uncouth, or more difficult to be explained by a teacher, than thoſe of logic, phyſics, and the whole circle of Ariſtotle's philoſophy; nay, even of the politer arts of architecture and its kindred ſtudies, or the ſcience of rhetoric itſelf. Sir Thomas More's famous legal queſtion contains in it nothing more difficult, than the definition which in his time the philoſophers currently gave of their *materia prima*, the groundwork of all natural knowledge; that it is *neque quid, neque quantum, neque quale, neque aliquid eorum quibus ens determinatur*; or its ſubſequent explanation by Adrian Heereboard, who aſſures us, that *materia prima non eſt corpus, neque per formam corporeitatis, neque per ſimplicem eſſentiam: eſt tamen ens, et quidem ſubſtantia, licet incompleta; habetque actum ex ſe entitativum, et ſimul eſt potentia ſubjectiva.* The law, therefore, with regard to its technical phraſes, ſtands upon the ſame footing with other ſtudies, and requeſts only the ſame indulgence.

This technical Latin continued in uſe from the time of its firſt introduction, till the ſubverſion of the ancient conſtitution under Cromwell; when, among many other innovations in the law, ſome for the better and ſome for the worſe, the language of the records was altered and turned into Engliſh. But, at the reſtoration of king Charles, this novelty was no longer countenanced; the practiſers finding it very difficult to expreſs themſelves ſo conciſely or ſignificantly in any other language but the Latin. And thus it continued without any ſenſible inconvenience till about the year 1730, when it was again thought proper that the proceedings at law ſhould be done into Engliſh, and it was accordingly ſo ordered by ſtatute 4 Geo. II. c. 26. This was done, in order that the common people might have knowledge and underſtanding of what was alleged or done for and againſt them in the proceſs and pleadings, the judgment and entries in cauſe. Which purpoſe it is doubtful how well it has anſwered; but there is reaſon to ſuſpect, that the people are now, after many years experience, altogether as ignorant in matters of law as before. On the other hand, theſe inconveniences have already ariſen from the alteration; that now many clerks and attorneys are hardly able to read, much leſs to underſtand, a record even of ſo modern a date as the reign of George I. And it has much enhanced the expence of all legal proceedings; for ſince the practiſers are confined (for the ſake of the ſtamp-duties, which are thereby conſiderably increaſed) to write only a ſtated number of words in a ſheet; and as the Engliſh language, through the multitude of its particles, is much more verboſe than the Latin; it follows, that the number of ſheets muſt be very much augmented by the change. The tranſlation alſo of technical phraſes, and the names of writs and other proceſs, were found to be ſo very ridiculous (a writ of *niſi prius*, *quare impedit*, *fieri facias*, *habeas corpus*, and the reſt, not being capable of an Engliſh dreſs with any degree of ſeriouſneſs), that in two years time a new act was obliged to be made, 6 Geo. II. c. 14. which allows all technical words to continue in the uſual languages, and has thereby defeated every beneficial purpoſe of the former ſtatute.

Trial by Wager of Law, (vadiatio legis;) a ſpecies of trial, in the Engliſh law, ſo called, as another ſpecies is ſtyled "wager of battel," *vadiatio duelli,* (ſee Battel): becauſe, as in the wager of battel, the defendant gave a pledge, gage, or *vadium*, or try the cauſe by battel; ſo here he was put in ſureties or *vadios*, that at ſuch a day he will make his law, that is, take the benefit which the law has allowed him, (ſee the article Trial). For our anceſtors conſidered, that there were many caſes where an innocent man, of good credit, might be overborne by a multitude of falſe witneſſes; and therefore eſtabliſhed this ſpecies of trial, by the oath of the defendant himſelf: for if he will abſolutely ſwear himſelf not chargeable, and appears to be a perſon of reputation, he ſhall go free, and for ever acquitted of the debt, or other cauſe of action.

Blackſt. Comment.

The manner of waging and making law is this. He that has waged, or given ſecurity, to make his law, brings with him into court eleven of his neighbours: a cuſtom which we find particularly deſcribed ſo early as in the league between Alfred and Guthrum the Dane; for by the old Saxon conſtitution every man's credit in courts of law depended upon the opinion which his neighbours had of his veracity. The defendant then, ſtanding at the end of the bar, is admoniſhed by the judges of the nature and danger of a falſe oath. And if he ſtill perſiſts, he is to repeat this or the like oath: "Hear this, ye juſtices, that I do not owe unto Richard Jones the ſum of ten pounds nor any penny thereof, in manner and form as the ſaid Richard hath declared againſt me. So help me God." And thereupon his eleven neighbours or compurgators ſhall avow upon their oaths, that they believe in their conſciences that he ſaith the truth; ſo that himſelf muſt be ſworn *de fidelitate*, and the eleven *de credulitate*.

In the old Swediſh or Gothic conſtitution, wager of law was not only permitted, as it is in *criminal* caſes, unleſs the fact be extremely clear againſt the priſoner; but was alſo abſolutely required, in many *civil* caſes: which an author of their own very juſtly charges as being the ſource of frequent perjury. This, he tells us, was owing to the Popiſh eccleſiaſtics, who introduced this method of purgation from their canon law; and, having ſown a plentiful crop of oaths in all judicial proceedings, reaped afterwards an ample harveſt of perjuries; for perjuries were puniſhed in part by pecuniary fines, payable to the coffers of the church. But in England wager of law is never *required*; and then only *admitted*, where an action is brought upon ſuch matters as may be ſuppoſed to be privately tranſacted between the parties, and wherein the defendant may be preſumed to have made ſatisfaction without being able to prove it. Therefore it is only in action of debt upon ſimple contract, or for amercement, in actions of detinue, and of account, where the debt may have been paid, the goods reſtored, or the account balanced, without any evidence of either. And by ſuch wager of law (when admitted) the plaintiff is perpetually barred; for the law, in the ſimplicity of the ancient times, preſumed that no one would forſwear himſelf for any worldly thing. Wager of law, however, lieth in a real action, where the tenant alleges he was not legally ſummoned to appear, as well as in mere perſonal contracts.

Stiernbook, l. 9. 1. c.

The wager of law was never permitted but where the defendant bore a fair and unreproachable character; and it was alſo confined to ſuch caſes where a debt might be ſuppoſed to be diſcharged, or ſatisfaction made in private, without any witneſſes to atteſt it: and many other prudential reſtrictions accompanied this indulgence. But at length it was conſidered, that (even under all its reſtrictions) it threw too great a temptation in the way of indigent or profligate men: and therefore by degrees new remedies were deviſed, and new forms of action were introduced, wherein no defendant is at liberty to wage his law. So that now no plaintiff need at all apprehend any danger from the hardineſs of his debtor's conſcience, unleſs he voluntarily chooſes to rely on his adverſary's veracity, by bringing an obſolete, inſtead of a modern, action. Therefore, one ſhall hardly hear at preſent of an action of *debt* brought upon a ſimple contract: that being ſupplied by an action of *treſpaſs on the caſe* for the breach of a promiſe or *aſſumpſit;* wherein, though the ſpecific debt cannot be recovered, yet damages may, equivalent to the ſpecific debt. And, this being an action of treſpaſs, no law can be waged therein. So, inſtead of an action of *detinue* to recover the very thing detained, an action of treſpaſs on the caſe in *trover and converſion* is uſually brought; wherein, though the horſe or other ſpecific chattel cannot be had, yet the defendant ſhall pay damages for the converſion, equal to the value of the chattel; and for this treſpaſs alſo no wager of law is allowed. In the room of actions of *account*, a bill in equity is uſually filed: wherein, though the defendant anſwers upon his oath, yet ſuch oath is not concluſive to the plaintiff; but he may prove every article by other evidence, in contradiction to what the defendant has ſworn. So that wager of law is quite out of uſe, being avoided by the mode of bringing the action; but ſtill it is not out of force. And therefore, when a new ſtatute inflicts a penalty, and gives an action of debt for recovering it, it is uſed to add, "in which no wager of law ſhall be allowed:" otherwiſe an hardy delinquent might eſcape any penalty of the law, by ſwearing he had never incurred, or elſe had diſcharged it.

Cuſtom-Houſe Laws. The expedient of exacting duties on goods imported, or exported, has been adopted by every commercial nation in Europe. The attention of the Britiſh legiſlature has not been confined to the object of raiſing a revenue alone, but they have attempted by duties, exemptions, drawbacks, bounties, and other regulations, to direct the national trade into thoſe channels that contribute moſt to the public benefit. And, in order to obtain every requiſite information, all goods, exported or imported, whether liable to duty or not, are required to be entered at the reſpective cuſtom-houſes; and, from theſe entries, accounts are regularly made up of the whole Britiſh trade, diſtinguiſhing the articles, their quantity and value, and the countries which ſupply or receive them.

The objects of the Britiſh legiſlature may be reduced to the following heads:

Firſt, To encourage the employment of Britiſh ſhipping and ſeamen, for the purpoſe of ſupplying the navy when public exigencies require.

Secondly, To increaſe the quantity of money in the nation, by prohibiting the exportation of Britiſh coin, by encouraging exportation, and diſcouraging importation, and by promoting agriculture, fiſheries, and manufactures. For theſe purpoſes, it is penal to entice certain manufacturers abroad, or export the tools uſed in their manufactures; the exportation of raw materials is, in moſt inſtances, prohibited; and their importation permitted free from duty, and ſometimes rewarded with a bounty. The exportation of ſome goods, manufactured to a certain length only (for example white cloth), is loaded with a duty, but permitted duty-free when the manufacture is carried to its full extent. The importation of rival manufactures is loaded with heavy duties, or abſolutely prohibited. Theſe reſtrictions are moſt ſevere towards nations with which the balance of trade is ſuppoſed againſt them, or which are conſidered as the moſt formidable rivals in power or commerce. Upon this principle the commerce with France, till lately, laboured under the heavieſt reſtrictions.

Thirdly, to ſecure plenty of neceſſaries for ſubſiſtence and manufacture, by diſcouraging the exportation of ſome articles that conſume by length of time, and regulating the corn-trade according to the exigencies of the ſeaſons.

Fourthly, To ſecure the trade of the colonies to the mother-country, and preſerve a mutual intercourſe, by encouraging the produce of their ſtaple-commodities, and reſtraining their progreſs in theſe manufactures which they receive in exchange.

Hamilton's Introduction to Merchandiſe.

The foundation of our commercial regulations is the famous act of navigation, which was firſt enacted during the time of the commonwealth, and adopted by the firſt parliament after the reſtoration. The ſubſtance of this act, and ſubſequent amendments, is as follows.

1. Goods from Aſia, Africa, and America, may not be imported, except in Britiſh-ſhips duly navigated, or ſhips belonging to the Britiſh plantations; and they can only be imported from the place of their production or manufacture, or the port where they are uſually firſt ſhipped for tranſportation. Goods of the Spaniſh or Portugueſe plantations, imported from Spain and Portugal in Britiſh ſhips, bullion and ſome other inconſiderable articles are excepted.

The reſtriction on European goods is not univerſal, but extends to ſeveral of the bulkieſt articles. Ruſſian goods, maſts, timber, boards, ſalt, pitch, roſin, tar, hemp, flax, raiſins, figs, prunes, olives, oil, corn, ſugar, potaſhes, wine, and vinegar, may not be imported, except in ſhips belonging to Great Britain or Ireland, legally manned; nor Turkey goods and currants, except in ſhips Britiſh built; or in ſhips belonging to the country where theſe goods are produced or manufactured, or firſt ſhipped for exportation; and, if imported in foreign ſhips, they pay alien's duty.

In order to intitle a ſhip to the privileges of a Britiſh ſhip, it muſt be built in Britain, and belong entirely to Britiſh ſubjects; and the maſter, and three-fourths of the mariners, muſt be Britiſh ſubjects, except in caſe of death, or unavoidable accidents. In time of war, the proportion of Britiſh mariners required is generally confined to one-fourth; and the ſame proportion only is required in the Greenland fiſhery.

No goods may be imported into, or exported from, the plantations in Aſia, Africa, or America, except in ſhips built in Britain, Ireland, or the plantations, or prize-ſhips, manned by Britiſh ſubjects, duly regiſtered, and legally navigated.

The following goods, enumerated in the act of navigation and ſubſequent acts, may not be exported from the plantations, except to ſome other plantation or to Britain: Tobacco, cotton-wool, indigo, ginger, fuſtic, and other dying wood, molaſſes, hemp, copper-ore, beaver-ſkins and other furs, pitch, tar, turpentine, maſts, yards, and boltſprits, coffee, pymento, cocoa-nuts, whale-fins, raw ſilk, pot and pearl aſhes, Rice and ſugar were formerly comprehended in this liſt, but their exportation is now permitted under certain reſtrictions.

Iron may not be imported to Europe, except to Ireland; and none of the non-enumerated may be imported to any country north of Cape Finiſterre, except the Bay of Biſcay and Ireland.

2. For the more effectual prevention of ſmuggling, no goods may be imported in veſſels belonging to Britiſh ſubjects and no wine, in any veſſel whatever, unleſs the maſter have a manifeſt on board, containing the name, meaſure, and built of the ſhip, the place to which it belongs, and a diſtinct enumeration of the goods on board, and places where they were laden. If the ſhip be cleared from any place under his Majeſty's dominions the manifeſt muſt be attended by the chief officer of the cuſtoms, or chief magiſtrate, who is required to tranſmit a copy thereof to the place of deſtination. Ship-maſters muſt deliver copies of this manifeſt to the firſt cuſtom-houſe officer who goes on board within four leagues of the ſhore, and alſo to the firſt who goes on board within the limits of any port, and muſt deliver the original manifeſt to the cuſtom-houſe at their arrival, and make report of their cargo upon oath. If the report diſagree with the manifeſt, or either diſagree with the cargo on board, the ſhip-maſter is liable in the penalty of L. 200. The proprietors of the goods muſt enter them, and pay the duties within 20, days; otherwiſe they may be carried to the cuſtom-houſe, and ſold by auction, if not relieved within ſix months; and the overplus of the value, after paying duty and charges, paid to the proprietors.

3 The importation of cattle, beef, mutton, and pork, except from Ireland, woollen cloths, malt, and various articles of hardware, cutlery, and earthen ware, are prohibited: Alſo the following goods from Germany and the Netherlands; olive oil, pitch, tar, potaſhes, roſin, ſalt, tobacco, wines, except Rheniſh wine, and Hungary wines from Hamburgh.

4. The importation of various other goods is reſtricted by particular regulations reſpecting the time and place of importation, the packages, the burden of the ſhip, the requiſition of a licence, and other circumſtances.

To guard more effectually againſt clandeſtine trade, the importation of ſome articles is only permitted in ſhips of a certain burden, whoſe operations are not eaſily concealed. Spirits muſt be imported in ſhips of

100 tons or upwards, except rum, and ſpirits of Britiſh plantations, which are only reſtricted to 70 tons; wine, 60 tons; tea, tobacco, and ſnuff, 50 tons; ſalt, 40 tons. Wine, ſpirits, and tobacco are alſo reſtricted in reſpect of the packages in which they may be imported.

5. Diamonds and precious ſtones, flax, flax-ſeed, linen-rags, beaver-wool, wool for clothiers, linen-yarn unbleached, and moſt drugs uſed in dyeing, may be imported duty free.

6. All goods imported are liable to duties, except ſuch as are expreſsly exempted. The revenue of cuſtoms is of great antiquity in Britain, but was new-modelled at the reſtoration of Charles II. A ſubſidy of tonnage on wines, and of poundage, or 1 s. per pound value of other goods, was granted during the king's life, and, after ſeveral prolongations, rendered perpetual. A book of rates was compoſed for aſcertaining theſe values; and articles not rated paid duty according to the value, as affirmed upon oath by the importer. If the goods be valued too low by the importer, the cuſtom-houſe officer may ſeize them, upon paying to the proprietor the value he ſwore to, and 10 per cent. for profit; ſuch goods to be ſold, and the overplus paid into the cuſtoms. Various additional duties have been impoſed; ſome on all goods, ſome on particular kinds; ſome according to the rates, ſome unconnected with the rates; ſome with an allowance of certain abatements, ſome without any allowance; the greater part to be paid down in ready money, and a few for which ſecurity may be granted; often with variations, according to the ſhip's place and circumſtances of importation. The number of branches amounted to upwards of 50; and ſometimes more than 10 were chargeable on the ſame articles. By this means, the revenue of the cuſtoms has become a ſubject of much intricacy. The inconveniences which this gave riſe to are now removed by the conſolidation act; which appoints one fixed duty for each article free from fractions, inſtead of the various branches to which they were formerly ſubject.

7. Goods of moſt kinds may be exported duty free when regularly entered; and thoſe that have paid duty on importation are generally intitled to drawback of part, ſometimes of the whole, when re-exported within three years, upon certificate that the duties were paid on importation, and oath of their identity. In ſome caſes, a bounty is given on manufactured goods, when the materials from which they are manufactured have paid duty on importation; and manufactures ſubject to exciſe, have generally the whole or part of the exciſe duties returned.

8. The following goods are prohibited to be exported; white-aſhes, horns, unwrought hides of black-cattle, tallow, coin, braſs, copper, engines for knitting ſtockings, tools for cotton, linen, woollen, ſilk, iron, and ſteel manufactures; wool, woolfells, woollen yarn, fullers earth, fulling clay, and tobacco pipe-clay.

9. The object of the laws reſpecting the corn-trade is to encourage agriculture, by not only permitting the free exportation, but rewarding it with a bounty when the prices are low, and checking the importation by a heavy duty; and, to prevent ſcarcity, by prohibiting the exportation when the prices are high, and permitting importation at an eaſy duty. Various temporary laws have been enacted for theſe purpoſes, and ſometimes other expedients employed in times of ſcarcity, ſuch as prohibiting the diſtillery from corn, and manufacture of ſtarch: And by a permanent law 1773, the low duties and bounties are regulated as under:

	Low duty.		Bounties	
Wheat at or above	48 s. per qr	6 d.	under 44 s	5 s.
Rye, -	32 s.	3 d.	28 s.	3 s.
Peaſe and beans,	32 s.	3 d.	28 s.	no bounty.
Oats, -	16 s.	2 d.	14 s.	2 s.
Barley, -	24 s.	2 d.	22 s.	2. s 6 d.

The duties, when the prices are lower than in the firſt column, amount to a prohibition. When the prices are higher than in the column prefixed to the bounty, no exportation is permitted. When oats are under the bounty price, oat-meal is intitled to a bounty of 2 s. 6 d. per quarter.

10. Bounties are allowed on the exportation of refined ſugar, ſail-cloth, linen under limited prices, ſilk ſtuffs of Britiſh manufacture, cordage, ſpirits when barley is under 24 s. beef, pork, and the following kinds of fiſh, ſalmon, herrings, pilchards, cod, ling, flake, and ſprats.

Various other bounties are allowed for the encouragement of the Britiſh fiſheries. Ships from 150 to 300 tons employed in the Greenland whale-fiſhery, and conforming to the regulations preſcribed, are allowed 30 s. per ton. Veſſels employed in the herring-fiſhery receive 20 s. per ton, beſides a bounty on the herrings caught and cured, amounting in ſome caſes to 4 s. per barrel. Other bounties are granted to a limited number of the moſt ſucceſsful veſſels employed in the herring and Newfoundland fiſheries, and in the ſouthern whale-fiſhery.

It is unneceſſary and impracticable, in this place, to enter into a full detail of the Britiſh cuſtom-houſe laws. Indeed, all that can be admitted into a work of this kind, muſt convey but very imperfect information; and even that little becomes uſeleſs in a ſhort time from alterations in the law. We have therefore only marked the general outlines in the preſent article; which, however, will be ſufficient to enable the reader to judge of the principles upon which the Britiſh legiſlature has acted. How far the means employed have contributed to the ends propoſed, and how far the ends themſelves are always wiſe; or whether a trade encumbered by fewer reſtrictions would not prove more extenſive and beneficial; has been a ſubject of much diſcuſſion: and of late a more liberal ſyſtem has been embraced in the commercial treaty with France, and in other regulations.

Mercantile Laws. The laws relating to commercial and maritime affairs approach nearer to uniformity through the different countries of Europe, than thoſe on other ſubjects. Some of the fundamental regulations have been taken from the Roman law; others have been ſuggeſted by experience, during the progreſs of commerce; and the whole have been gradually reduced to a ſyſtem, and adopted into the laws of trading nations, but with ſome local varieties and exceptions.

The Britiſh legiſlature has enacted many ſtatutes reſpecting commerce; yet the greater part of their mercantile law is to be collected from the deciſions of their courts of juſtice, founded on the cuſtom of merchants. A proof of ſuch cuſtom, where no direct ſtatute interferes, determines the controverſy, and becomes a precedent for regulating like caſes afterwards. The exiſtence of a cuſtom not formerly recogniſed, is, in England, determined by a jury of merchants.

The moſt common mercantile contracts are thoſe between buyer and ſeller; between factor and employer; between partners; between the owners, maſters, mariners, and freighters of ſhips; between inſurers and the owners of the ſubject inſured; and between the parties concerned in tranſacting bills of exchange. See FACTORAGE, SALE, PARTNERSHIP, INSURANCE, BILL, &c. and the next article.

Maritime Laws. The moſt ancient ſyſtem of maritime laws is that of Rhodes, which was in force during the time of the Grecian empire, and afterwards incorporated into the Roman law. Although, in ſome parts, not applicable to the preſent ſtate of trade, and, in others, now hardly intelligible, it contains the groundwork of the moſt equitable and beneficial rules obſerved in modern commerce. A like ſyſtem was ſet forth by Richard I. of England, called the *Statutes of Oleron*; and another, by the town of Wiſby, in the iſland of Gothland. From theſe ſyſtems, improved and enlarged in the courſe of time, their general maritime law is derived. The juriſdiction of matters purely maritime belongs, in England, to the court of admiralty, which proceeds on the civil law; but their proceedings are ſubject to the controul, and their deciſions to the review of the ſuperior courts.

We ſhall here conſider the obligations which ſubſiſt between the maſters or owners of ſhips, the freighters, and the furniſhers of proviſions or repairs.

1. *Maſters and Freighters.* A charter-party is a contract between the maſter and freighters, in which the ſhip and voyage is deſcribed, and the time and conditions of performing it are aſcertained.

The freight is moſt frequently determined for the whole voyage, without reſpect to time. Sometimes it depends on the time.

In the former caſe, it is either fixed at a certain ſum for the whole cargo; or ſo much *per* ton, barrel-bulk, or other weight or meaſure; or ſo much *per cent.* on the value of the cargo. This laſt is common on goods ſent to America; and the invoices are produced to aſcertain the value.

The burden of the ſhip is generally mentioned in the contract, in this manner *one hundred tons, or thereby*; and the number mentioned ought not to differ above 5 tons, at moſt, from the exact meaſure. If a certain ſum be agreed on for the freight of the ſhip, it muſt all be paid, although the ſhip, when meaſured, ſhould prove leſs, unleſs the burden be *warranted*. If the ſhip be freighted for *tranſporting* cattle, or ſlaves, at ſo much a head, and ſome of them die on the paſſage, freight is only due for ſuch as are delivered alive; but, if for *lading* them, it is due for all that were put on board.

When a whole ſhip is freighted, if the maſter ſuffers any other goods beſides thoſe of the freighter to be put on board, he is liable for damages.

It is common to mention the number of days that the ſhip ſhall continue at each port to load or unload. The expreſſion uſed is, *work weather days*; to ſignify, that Sundays, holidays, and days when the weather ſtops the work, are not reckoned. If the ſhip be detained longer, a daily allowance is often agreed on, in name of *demurrage*.

If the voyage be completed in terms of the agreement, without any misfortune, the maſter has a right to demand payment of the freight before he delivers the goods. But if the ſafe delivery be prevented by any fault or accident, the parties are liable, according to the following rules.

If the merchant do not load the ſhip within the time agreed on, the maſter may engage with another, and recover damages.

If the merchant load the ſhip, and recall it after it has ſet ſail, he muſt pay the whole freight; but if he unload it before it ſets ſail, he is liable for damages only.

If a merchant loads goods which it is not lawful to export, and the ſhip be prevented from proceeding on that account, he muſt pay the freight notwithſtanding.

If the ſhipmaſter be not ready to proceed on the voyage at the time agreed on, the merchant may load the whole, or part of the cargo, on board another ſhip, and recover damages; but chance, or notorious accident, by the marine law, releaſes the maſter from damages.

If an embargo be laid on the ſhip before it ſails, the charter-party is diſſolved, and the merchant pays the expence of loading and unloading; but if the embargo be only for a ſhort limited time, the voyage ſhall be performed when it expires, and neither party is liable for damages.

If the ſhipmaſter ſails to any other port than that agreed on, without neceſſity, he is liable for damages; if through neceſſity, he muſt ſail to the port agreed on, at his own expence.

If a ſhip be taken by the enemy, and retaken or ranſomed, the charter-party continues in force.

If the maſter transfer the goods from his own ſhip to another, without neceſſity, and they periſh, he is liable for the value; but if his own ſhip be in imminent danger, the goods may be put on board another ſhip at the riſk of the owner.

If a ſhip be freighted out and home, and a ſum agreed on for the whole voyage, nothing is due till it return; and the whole is loſt if the ſhip be loſt on the return.

If a certain ſum be ſpecified for the homeward voyage, it is due, although the factor abroad ſhould have no goods to ſend home.

In the caſe of a ſhip freighted to Madeira, Carolina, and home, a particular freight fixed for the homeward voyage, and an option reſerved for the factor at

Carolina to decline it, unleſs the ſhip arrived before 1ſt of March: the ſhipmaſter, foreſeeing he could not arrive there within that time, and might be diſappointed of a freight, did not go there at all. He was found liable in damages, as the obligation was abſolute on his part, and conditional only on the other.

If the goods be damaged without fault of the ſhip or maſter, the owner is not obliged to receive them and pay freight, but he muſt either receive the whole, or abandon the whole; he cannot chooſe thoſe that are in beſt order, and reject the others. If the goods be damaged through the inſufficiency of the ſhip, the maſter is liable for the ſame; but, if it be owing to ſtreſs of weather, he is not accountable. It is cuſtomary for ſhipmaſters, when they ſuſpect damage, to take a *proteſt againſt wind and weather* at their arrival. But as this is the declaration of a party, it does not bear credit, unleſs ſupported by collateral circumſtances.

If part of the goods be thrown over-board, or taken by the enemy, the part delivered pays freight.

The ſhipmaſter is accountable for all the goods received on board, by himſelf or mariners, unleſs they periſh by the act of GOD, or of the king's enemies.

Shipmaſters are not liable for leakage on liquors; nor accountable for the contents of packages, unleſs packed and delivered in their preſence.

Upon a principle of equity, that the labourer is worthy of his hire, differences ariſing with regard to freight, when the caſe is doubtful, ought rather to be determined in favour of the ſhipmaſter.

2. *Ship and Owners with Creditors.* When debts are contracted for proviſions or repairs to a ſhip, or ariſe from a failure in any of the abovementioned obligations, the ſhip and tackle, and the owners, are liable for the debt, as well as the maſter.

By the mercantile law, the owners are liable in all caſes, without limitation; but by ſtatute, they are not liable for embezzlement beyond their value of ſhip, tackle, and freight.

A ſhipmaſter may pledge his ſhip for neceſſary repairs during a voyage; and this hypothecation is implied by the maritime law when ſuch debts are contracted. This regulation is neceſſary, and is therefore adopted by all commercial nations; for, otherwiſe, the maſter might not find credit for neceſſary repairs, and the ſhip might be loſt. If repairs be made at different places, the laſt are preferable.

The relief againſt the ſhip is competent to the court of admiralty in England, only when repairs are furniſhed during the courſe of a voyage; for the neceſſity of the caſe extends no further. If a ſhip be repaired at home (*e. g.* upon the river Thames), the creditor is only intitled to relief at common law.

The creditor may ſue either the maſters or owners; but if he undertook the work on the ſpecial promiſe of the one, the other is not liable.

If the maſter buys proviſions on credit, the owners are liable for the debt, though they have given him money to pay them.

If a ſhip be mortgaged, and afterwards loſt at ſea, the owners muſt pay the debt; for the mortgage is only an additional ſecurity, though there be no expreſs words to that purpoſe in the covenant.

If a ſhip be taken by the enemy, and ranſomed, the owners are liable to pay the ranſom, though the ranſomer die in the hands of the captors.

3. *Owners of ſhip and cargo with each other.* There is a mutual obligation which ſubſiſts between all the owners of a ſhip and cargo. In time of danger, it is often neceſſary to incur a certain loſs of part for the greater ſecurity of the reſt; to cut a cable; to lighten the ſhip, by throwing part of the goods overboard; to run it aſhore; or the like: and as it is unreaſonable that the owners of the thing expoſed for the common ſafety ſhould bear the whole loſs, it is defrayed by an equal contribution among the proprietors of the ſhip, cargo, and freight. This is the famous *Lex Rhodia de jactu*, and is now called a *general average*.

The cuſtom of valuing goods which contribute to a general average, is not uniform in all places. They are generally valued at the price they yield at the port of deſtination, charges deducted; and goods thrown overboard are valued at the price they would have yielded there. Sailors wages, cloaths and money belonging to paſſengers, and goods belonging to the king, pay no general average; but proprietors of gold and ſilver, in caſe of goods being thrown overboard, contribute to the full extent of their intereſt.

The following particulars are charged as general average: Damage ſuſtained in an engagement with the enemy; attendance on the wounded, and rewards given for ſervice in time of danger, or gratuities to the widows or children of the ſlain; ranſom; goods given to the enemy in the nature of ranſom; charges of bringing the ſhip to a place of ſafety when in danger from the enemy, or waiting for convoy; charges of quarantine; goods thrown overboard; maſts or rigging cut; holds cut in the ſhip to clear it of water; pilotage, when a lake is ſprung; damage, when voluntarily run aground, and expence of bringing it afloat; goods, loſt by being put in a lighter; the long boat loſt in lightening the ſhip in time of danger; hire of cables and anchors; charges of laying in ballaſt, victualling, and guarding the ſhip when detained; charges at law, in reclaiming the ſhip and cargo; intereſt and commiſſion on all theſe deburſements.

Though goods put on board a lighter, and loſt, are charged as a general average; yet if the lighter be ſaved, and the ſhip with the reſt of the goods be loſt, the goods in the lighter belong to their reſpective proprietors, without being liable to any contribution.

If part of the goods be plundered by a pirate, the proprietor or ſhipmaſter is not intitled to any contribution.

The eſſential circnmſtances that conſtitute a general average are theſe; the loſs muſt be the effect of a voluntary action; and the object of that action the common ſafety of the whole. Quarantine, which is allowed, ſeems not to fall within this deſcription.

Game-Laws. See the article GAME.

Sir William Blackſtone, treating of the alterations in Britiſh laws, and mentioning franchiſes granted to chaſe and free warren, as well to preſerve the breed of animals, as to indulge the ſubject, adds, "From a ſimilar principle to which, though the foreſts laws are now mitigated, and by degrees grown entirely obſolete; yet from this root has ſprung a *baſtard-ſlip*, known by the name of the *game law*, now arrived to and wantoning in its higheſt vigour: both founded upon the ſame unreaſonable notion of permanent property in wild creatures; and both productive of the ſame tyranny to the commons; but with this difference, that the foreſt-laws eſtabliſhed only one mighty hunter throughout the land; *the game laws have raiſed a little* Nimrod *in every manor*. And in one reſpect the ancient law was much leſs unreaſonable than the modern; for the king's grantee of a chaſe or free-warren, might kill game in every part of his franchiſe; but now, though a freeholder of leſs than L. 100 a year *is forbidden to kill partridge upon his own eſtate*, yet nobody elſe (not even the lord of the manor, unleſs he hath a grant of free warren) can do it without *committing a treſpaſs* and *ſubjecting himſelf to an action*.

Under the article GAME, the deſtroying ſuch beaſts and fowls as are ranked under that denomination, was obſerved (upon the old principles of the foreſt-law) to be a treſpaſs and offence in all perſons alike, who have not authority from the crown to kill game (which is royal property) by the grant of either a free warren, or at leaſt a manor of their own. But the laws called the *game-laws* have alſo inflicted additional puniſhments (chiefly pecuniary) on perſons guilty of this general offence, unleſs they be people of ſuch rank or fortune as is therein particularly ſpecified. All perſons, therefore, of what property or diſtinction ſoever, that kill game out of their own territories, or even upon their own eſtates, without the king's licence expreſſed by the grant of a franchiſe, are guilty of the firſt original offence of encroaching on the royal prerogative. And thoſe indigent perſons who do ſo, without having ſuch rank or fortune as is generally called a *qualification*, are guilty, not only of the original offence, but of the aggravations alſo created by the ſtatutes for preſerving the game: which aggravations are ſo ſeverely puniſhed, and thoſe puniſhments ſo implacably inflicted, that the offence againſt the king is ſeldom thought of, provided the miſerable delinquent can make his peace with the lord of the manor. The only rational footing upon which this offence, thus aggravated, can be conſidered as a crime, is, that in low and indigent perſons it promotes idleneſs, and takes them away from their proper employments and callings: which is an offence againſt the public police and economy of the commonwealth.

The ſtatutes for preſerving the game are many and various, and not a little obſcure and intricate; it being remarked, that in one ſtatute only, 5 Ann. c. 14. there is falſe grammar in no fewer than ſix places, beſides other miſtakes: the occaſion of which, or what denomination of perſons were probably the penners of theſe ſtatutes, it is unneceſſary here to inquire. It may be in general ſufficient to obſerve, that the *qualifications* for killing game, as they are uſually called, or more properly the exemptions from the penalties inflicted by the ſtatute law, are, 1. The having a freehold eſtate of L. 100 *per annum*; there being fifty times the property required to enable a man to kill a partridge, as to vote for a knight of the ſhire. 2. A leaſehold for 99 years of L. 150 *per annum*. 3. Being the ſon and heir apparent of an eſquire (a very looſe and vague deſcription) or perſon of ſuperior degree. 4. Being the owner or keeper of a foreſt, park, chaſe, or warren. For unqualified perſons tranſgreſſing theſe laws, by killing game, keeping engines for that purpoſe, or even having game in their cuſtody, or for perſons (however qualified) that kill game, or have it in poſſeſſion, at unſeaſonable times of the year, or unſeaſonable hours of the day or night, on Sundays or on Chriſtmas day, there are various penalties aſſigned, corporal and pecuniary, by different ſtatutes (after-mentioned), on any of which, but only on one at a time, the juſtices may convict in a ſummary way, or (in moſt of them) proſecutions may be carried on at the aſſizes. And, laſtly, by ſtatute 28 Geo. II. c. 12. no perſon, however qualified to kill, may make merchandiſe of this valuable privilege, by ſelling or expoſing to ſale any game, on pain of like forfeiture as if he had no qualification.

The ſtatutes above referred to are as follow. No perſon ſhall take pheaſants or partridges with engines in another man's ground, without licence, on pain of 10 l. ſtat. 11 Hen. VII. c. 13. If any perſon ſhall take or kill any pheaſants or partridges with any net in the night-time, they ſhall forfeit 20 s. for every pheaſant, and 10 s. for every partridge taken; and hunting with ſpaniels in ſtanding corn, incurs a forfeiture of 40 s. 23 Eliz. c. 10. Thoſe who kill any pheaſant, partridge, duck, heron, hare, or other game, are liable to a forfeiture of 20s. for every fowl and hare; and ſelling, or buying to ſell again, any hare, pheaſant, &c. the forfeiture is 10 s. for each hare, &c. 1 Jac. I. c. 17. Alſo pheaſants or partridges are not to be taken between the firſt of July and the laſt of Auguſt, on pain of impriſonment for a month, unleſs the offenders pay 20 s. for every pheaſant, &c. killed: and conſtables, having a juſtice of peace's warrant, may ſearch for game and nets, in the poſſeſſion of perſons not qualified by law to kill game or to keep ſuch nets, 7 Jac. I. c. 11. Conſtables, by a warrant of a juſtice of peace, are to ſearch houſes of ſuſpected perſons for game: and if any game be found upon them, and they do not give a good account how they came by the ſame, they ſhall forfeit for every hare, pheaſant, or partridge, not under 5 s. nor exceeding 20 s. And inferior tradeſmen hunting, &c. are ſubject to the penalties of the act, and may likewiſe be ſued for treſpaſs. If officers of the army or ſoldiers kill game without leave, they forfeit 5 l. an officer, and 10 s. a ſoldier; 4 and 5 W. and M. c. 23. Higglers, chapmen, carriers, inn-keepers, victuallers, &c. having in their cuſtody hare, pheaſant, partridge, heath-game, &c. (except ſent by ſome perſon qualified to kill game), ſhall forfeit for every hare and fowl 5 l. to be levied by diſtreſs and ſale of their goods, being proved by one witneſs, before a juſtice; and for want of diſtreſs ſhall be committed to the houſe of correction for three months: one moiety of the forfeiture to the informer, and the other to the poor. And ſelling game, or offering the ſame to ſale, incurs the like penalty; wherein hare and other game found in a ſhop, &c. is adjudged an expoſing to ſale: killing hares in the night is liable to the ſame penalties: and if any perſons ſhall drive wild-fowls with nets, between the firſt day of July and the firſt of September, they ſhall forfeit 5 s. for every fowl; 5 Ann. c. 14. 9 Ann. c. 25. If any unqualified perſon ſhall keep a gun, he ſhall forfeit 10 l.; and perſons being qualified may take guns from thoſe that are not, and break them; 21 & 22 Car. II. c. 25. and 33 H. VIII. c. 6. One juſtice of peace, upon examination and proof of the offence, may commit the offender till he hath paid the forfeiture of 10 l. And perſons, not qualified by law, keeping dogs, nets, or other engines to kill game, being convicted thereof before a juſtice of peace, ſhall forfeit 5 l. or be ſent to the houſe of correction for three months; and the dogs, game, &c. ſhall be taken from them, by the ſtatute 5 Ann. If a perſon hunt upon the ground of another, ſuch other perſon cannot juſtify killing of his dogs, as appears by 2 Roll. Abr. 567. But it was otherwiſe adjudged Mich. 33 Car. II. in C. B. 2 Cro. 44. and ſee 3. Lev. xxviii. In actions of debt, *qui tam*, &c. by a common informer on the ſtatute 5 Ann. for 15l. wherein the plaintiff declared on two ſeveral counts, one for 10l. for killing two partridges, the other for 5l. for keeping an engine to deſtroy the game, not being qualified, &c. the plaintiff had a verdict for 5 l. only: this action was brought by virtue of the ſtat. 8 Geo. I. See ſtat. 9 Geo. I. c. 22. See likewiſe 24 Geo. II. c. 34. for the better preſervation of the game in Scotland. By the ſtat. 26 Geo. II. c. 2. all ſuits and actions brought by virtue of ſtat. 8 Geo. I. c.—— for the recovery of any pecuniary penalty, or ſum of money, for offences commited againſt any law for the better preſervation of the game, ſhall be brought before the end of the ſecond term after the offence committed.

By 28 Geo. II. c. 12. perſons ſelling, or expoſing to ſale, any game, are liable to the penalties inflicted by 5 Ann. c. 14. on higglers, &c. offering game to ſale: and game found in the houſe or poſſeſſion of a poulterer, ſaleſman, fiſhmonger, cook, or paſtry-cook, is deemed expoſing thereof to ſale.

By 2 Geo. III. c. 19. after the 1ſt June 1762, no perſon may take, kill, buy or ſell, or have in his cuſtody, any patridge, between 12th February and 1ſt September, or pheaſant between 1ſt February and 1ſt October, or heath-fowl between 1ſt January and 20th Auguſt, or grouſe between 1ſt December and 25th July, in any year; pheaſants taken in their proper ſeaſon, and kept in mews, or breeding places, excepted: and perſons offending in any of the caſes aforeſaid, forfeit 5 l. per bird, to the proſecutor, to be recovered, with full coſts, in any of the courts at Weſtminſter. By this act, likewiſe, the whole of the pecuniary penalties under the 8 Geo. I. c. 19. may be ſued for, and recovered to the ſole uſe of the proſecutor, with double coſts; and no part thereof to go to the poor of the pariſh.

By 5 George III. c. 14. perſons convicted of entering warrens in the night-time, and taking or killing coneys there, or aiding or aſſiſting therein, may be puniſhed by tranſportation, or by whipping, fine, or impriſonment. Perſons convicted on this act, not liable to be convicted under any former act. This act does not extend to the deſtroying coneys in the day-time, on the ſea and river-banks in the county of Lincoln, &c. No ſatisfaction to be made for damages occaſioned by entry, unleſs they exceed 1 s. It may not be improper to mention an act lately made, and not yet repealed, viz. 10 Geo III. c. 19. for preſervation of the game, which ſhows the importance of the object. It is thereby enacted, That if any perſon kill any hare, &c. between ſun-ſetting and ſun-riſing, or uſe any gun, &c. for deſtroying game, ſhall for the firſt offence be impriſoned for any time not exceeding ſix nor leſs than three months: if guilty of a ſecond offence, after conviction of a firſt, to be impriſoned for any time not exceeding 12 months nor leſs than ſix; and ſhall alſo, within three days after the time of his commitment, either for the firſt or for any other offence, be once publickly whipped.

By 25 George III. c. 50. and 31 George III. c. 21. every perſon in Great Britain (the royal family excepted), who ſhall, after July 1ſt 1785, uſe any dog, gun, net, or other engine, for the taking or deſtruction of game (not as acting as gamekeeper), ſhall deliver in a paper or account in writing, containing his name and place of abode, to the clerk of the peace or his deputy, and annually take out a certificate thereof; and every ſuch certificate ſhall be charged with a ſtamp-duty of L. 2, 2 s. (and an additional L. 1, 1 s. by 31 Geo. III. c. 21.) making in the whole L. 3, 3 s.—Every deputation of a gamekeeper ſhall be regiſtered with the clerk of the peace, and ſuch gamekeeper ſhall annually take out a certificate thereof; which certificate ſhall be charged with a ſtamp duty of 10s. 6d. (and an additional 10 s. 6 d. by 31 Geo. III. c. 21.), making in the whole L. 1, 1 s.—The duties to be under the management of the commiſſioners of the ſtamp-office.

From and after the ſaid 1ſt of July 1785, the clerk of the peace ſhall annually deliver to perſons requiring the ſame, duly ſtamped, a certificate or licence according to the form therein mentioned, for which he ſhall be intitled to demand 1 s. for his trouble; and on refuſal or neglect to deliver the ſame, forfeit L. 20.—Every certificate to bear date the day when iſſued, and to continue in force until the 1ſt day of July then following, on penalty of 20 l.

After the firſt day of July 1785, any perſon that ſhall uſe any greyhound, hound, pointer, ſetting-dog, ſpaniel, or other dog, or any gun, net, or engine, for taking or killing of game, without a certificate, is liable to the penalty of 20 l. And if any gamekeeper ſhall, for the ſpace of 20 days after the ſaid 1ſt day of July, or if any gamekeeper thereafter to be appointed ſhall, for the ſpace of 20 days next after ſuch appointment, neglect or refuſe to regiſter his deputation and take out a certificate thereof, he is liable to the penalty of 20 l.

The clerks of the peace are to tranſmit to the ſtamp-office in London alphabetical liſts of the certificates granted in every year before the 1ſt day of Auguſt, under penalty of 20 l. Theſe liſts are to be kept at the ſtamp-office in London, and there to be inſpected on payment of 1 s.: And the commiſſioners of the ſtamp duties are, once or oftener in every year, as ſoon as ſuch liſts are tranſmitted to them, to cauſe the ſame to be publiſhed in the newſpapers circulating in each county, or ſuch public paper as they ſhall think moſt proper.

If any gamekeeper, who ſhall have regiſtered his deputation, and taken out a certificate thereof, ſhall be changed, and a new gamekeeper appointed in his ſtead, the firſt certificate is declared null and void, and the perſon acting under the ſame after notice, is liable to the penalty of 20 l. And any perſon in purſuit of game, who ſhall refuſe to produce his certificate, or to tell his name and place of abode, or ſhall give in any falſe or fictitious name or place of abode to any perſon requiring the ſame, who ſhall have obtained a certificate, is liable to the penalty of 50 l.

The certificates are not to authoriſe perſons to kill game at any time prohibited by law, nor to give any perſon any right to kill game, unleſs ſuch perſon ſhall be qualified ſo to do by the laws now in being, but ſhall be liable to the ſame penalties as if this act had not paſſed. [So that though by this act qualified and unqualified perſons are equally included, yet having a certificate does not give an unqualified perſon a right to kill game: the point of right ſtill ſtands upon the former acts of parliament; and any unqualified perſon killing game without a certificate, is not only liable to the penalty inflicted by this act, but alſo to all the former penalties relating to the killing of game, &c.]

Witneſſes refuſing to appear on juſtices ſummons, or appearing and refuſing to give evidence, forfeit 10 l. The certificates obtained under deputations, not to be given in evidence for killing of game by a gamekeeper out of the manor, in reſpect of which ſuch deputation or appointment was given and made. Perſons counterfeiting ſtamps to ſuffer death as felons.

Penalties exceeding 20 l. are to be recovered in any of his majeſty's courts of record at Weſtminſter; and penalties not exceeding 20 l. are recoverable before two juſtices, and may be levied by diſtreſs. The whole of the penalties go to the informer.

Military Law. See MILITARY and MARINE.

LAW (John,), the famous projector, was the eldeſt ſon of a goldſmith burgeſs in Edinburgh, by Elizabeth Campbell heireſs of Laurieſton near that city; and was born about the year 1681. He was bred to no buſineſs; but poſſeſſed great abilities, and a very fertile invention. He had the addreſs, when but a very young man, to recommend himſelf to the king's miniſters in Scotland to arrange and fit the revenue accounts, which were in great diſorder at the time of ſettling the equivalent before the union of the kingdoms. The attention of the Scottiſh parliament being alſo turned to the contrivance of ſome means for ſupplying the kingdom with money, and facilitating the circulation of ſpecie, for want of which the induſtry of Scotland languiſhed; he propoſed to them, for theſe purpoſes, the eſtabliſhment of a bank of a particular kind, which he ſeems to have imagined might iſſue paper to the amount of the whole value of all the lands in the country: but this ſcheme the parliament by no means thought it expedient to adopt.

His father dying about the year 1704, Law ſucceeded to the ſmall eſtate of Laurieſton; but the rents being inſufficient for his expences, he had recourſe to gaming. He was tall and graceful in his perſon, and much addicted to gallantry and finery; and giving a kind of ton at Edinburgh, he went commonly by the name of *Beau Law*. He was forced to fly his country, however, in the midſt of his career, in conſequence of having fought a duel and killed his antagoniſt; and in ſome of the French literary gazettes it is ſaid that he run off with a married lady. In his flight from juſtice he viſited Italy; and was baniſhed from Venice and Genoa, becauſe he contrived to drain the youth of theſe cities of their money, by his ſuperiority in calculation, that is, by being a cheat and a ſharper. He wandered over all Italy, living on the event of the moſt ſingular bets and wagers, which ſeemed to be advantageous to thoſe who were curious after novelty; but which were always of the moſt certain ſucceſs with regard to him. He arrived at Turin, and propoſed his ſyſtem to the duke of Savoy, who ſaw at once, that, by deceiving his ſubjects, he would in a ſhort time have the whole money of the kingdom in his poſſeſſion: but that ſagacious prince aſking him how his ſubjects were to pay their taxes when all their money ſhould be gone, Law was diſconcerted, not expecting ſuch a queſtion.

Having been baniſhed from Italy, and thus repulſed at Turin, Law proceeded to Paris, where he was already known as a projector. In the lifetime of Louis XIV. he had tranſmitted his ſchemes to Deſmareſt and to Chamillard, who had rejected them as dangerous innovations. He now propoſed them to the Duc d'Orleans, who deſired Noailles to examine them, to be as favourable in his report as poſſible, and to remark ſuch of them as were practicable. Noailles called in the aſſiſtance of ſeveral merchants and bankers who were averſe to the ſyſtem. Law then propoſed the eſtabliſhment of a bank, compoſed of a company, with a ſtock of ſix millions. Such an inſtitution promiſed to be very advantageous to commerce. An arret of the 2d March 1716 eſtabliſhed this bank, by authority, in favour of Law and his aſſociates; two hundred thouſand ſhares were inſtituted of one thouſand livres each; and Law depoſited in it to the value of two or three thouſand crowns which he had accumulated in Italy, by gaming or otherwiſe. This eſtabliſhment very much diſpleaſed the bankers, becauſe at the beginning buſineſs was tranſacted here at a very ſmall premium, which the old financiers had charged very highly. Many people had at firſt little confidence in this bank; but when it was found that the payments were made with quickneſs and punctuality, they began to prefer its notes to ready money. In conſequence of this, ſhares roſe to more than 20 times their original value; and in 1719 their valuation was more than 80 times the amount of all the current ſpecie in the kingdom. But the following year, this great fabric of falſe credit fell to the ground, and almoſt overthrew the French government, ruining ſome thouſands of families; and it is remarkable, that the ſame deſperate game was played by the South Sea directors in England, in the ſame fatal year, 1720. Law being exiled as ſoon as the credit of his projects began to fail, retired to Venice, where he died in 1729.

The principles upon which Law's original ſcheme was founded, are explained by himſelf in *A Diſcourſe concerning Money and Trade*, which he publiſhed in Scotland where (as we have ſeen) he firſt propoſed it. "The ſplendid but viſionary ideas which are ſet forth in that and ſome other works upon the ſame principles (Dr Adam Smith obſerves), ſtill continue to make an impreſſion upon many people; and have perhaps in part contributed to that exceſs of banking which has of late been complained of both in Scotland and in other places."

LAW (Edmund), D. D. biſhop of Carliſle, was born in the pariſh of Cartmel in Lancaſhire, in the year 1703. His father, who was a clergyman, held a ſmall chapel in that neighbourhood; but the family had been ſituated at Aſkham, in the county of Weſtmoreland. He was educated for ſome time at Cartmel ſchool, afterwards at the free grammar-ſchool at Kendal; from which he went, very well inſtructed in the learning of grammar ſchools, to St John's college in Cambridge.

Soon after taking his firſt degree, he was elected fellow of Chriſt-college in that univerſity. During his reſidence in which college, he became known to the public by a Tranſlation of Archbiſhop King's Eſſay upon the Origin of Evil, with copious notes; in which many metaphyſical ſubjects, curious and intereſting in their own nature, are treated of with great ingenuity, learning, and novelty. To this work was prefixed, under the name of a Preliminary Diſſertation, a very valuable piece, written by the reverend Mr Gay of Sidney college. Our biſhop always ſpoke of this gentleman in terms of the greateſt reſpect. In the Bible and in the writings of Mr Locke, no man, he uſed to ſay, was ſo well verſed.

He alſo, whilſt at Chriſt-college, undertook and went through a very laborious part in preparing for the preſs an edition of Stephens's Theſaurus. His acquaintance, during this his firſt reſidence in the univerſity, was principally with Dr Waterland, the learned maſter of Magdalen college; Dr Jortin, a name known to every ſcholar; and Dr Taylor, the editor of Demoſthenes.

In the year 1737 he was preſented by the univerſity to the living of Grayſtock in the county of Cumberland, a rectory of about 300 l. a-year. The advowſon of this benefice belonged to the family of Howards of Grayſtock, but devolved to the univerſity, for this turn, by virtue of an act of parliament, which transfers to theſe two bodies the nomination to ſuch benefices as appertain, at the time of the vacancy, to the patronage of a Roman catholic. The right, however, of the univerſity was conteſted; and it was not till after a law-ſuit of two years continuance that Mr Law was ſettled in his living. Soon after this, he married Mary the daughter of John Chriſtian, Eſq; of Unerigg, in the county of Cumberland; a lady whoſe character is remembered with tenderneſs and eſteem by all who knew her.

In 1743, he was promoted by Sir George Fleming, biſhop of Carliſle, to the archdeaconry of that dioceſe; and in 1746 went from Grayſtock to reſide at Salkeld, a pleaſant village upon the banks of the river Eden, the rectory of which is annexed to the archdeaconry. Mr Law was not one of thoſe who loſe and forget themſelves in the country. During his reſidence at Salkeld, he publiſhed Conſiderations on the Theory of Religion: to which were ſubjoined, Reflections on the Life and character of Chriſt; and an Appendix concerning the uſe of the words Soul and Spirit in holy ſcripture, and the ſtate of the dead there deſcribed.

Dr Keene held at this time, with the biſhopric of Cheſter, the maſterſhip of Peterhouſe in Cambridge. Deſiring to leave the univerſity, he procured Dr Law to be elected to ſucceed him in that ſtation. This took place in the year 1756; in which year Dr Law reſigned his archdeacony in favour of Mr Eyre, a brother-in-law of Dr Keene. Two years before this, he had proceeded to his degree of Doctor in Divinity; in his public exerciſe for which, he defended the doctrine of what is uſually called the "ſleep of the ſoul."

About the year 1760, he was appointed head librarian of the univerſity; a ſituation which, as it procured an eaſy and quick acceſs to books, was peculiarly agreeable to his taſte and habits. Some time after this, he was alſo appointed caſuiſtical profeſſor. In the year 1762, he ſuffered an irreparable loſs by the death of his lady; a loſs in itſelf every way afflicting, and rendered more ſo by the ſituation of his family, which then conſiſted of eleven children, many of them very young. Some years afterwards, he received ſeveral preferments, which were rather honourable expreſſions of regard from his friends than of much advantage to his fortune.

By Dr Cornwallis, then biſhop of Litchfield, afterwards archbiſhop of Canterbury, who had been his pupil at Chriſt-college, he was appointed to the archdeaconry of Staffordſhire, and to a prebend in the church of Litchfield. By his old acquaintance Dr Green, biſhop of Lincoln, he was made a prebendary of that church. But in the year 1767, by the intervention of the duke of Newcaſtle, to whoſe intereſt, in the memorable conteſt for the high-ſtewardſhip of the univerſity, he had adhered in oppoſition to ſome temptations, he obtained a ſtall in the church of Durham. The year after this, the duke of Grafton, who had a ſhort time before been elected chancellor of the univerſity, recommended the maſter of Peterhouſe to his majeſty for the biſhopric of Carliſle. This recommendation was made not only without ſolicitation on his part or that of his friends, but without his knowledge, until the duke's intention in his favour was ſignified to him by the archbiſhop.

In or about the year 1777, our biſhop gave to the public a handſome edition, in three volumes quarto, of the Works of Mr Locke, with a Life of the Author, and a Preface. M. Locke's writings and character he held in the higheſt eſteem, and ſeems to have drawn from them many of his own principles. He was a diſciple of that ſchool. About the ſame time he publiſhed a tract, which engaged ſome attention in the controverſy concerning ſubſcription; and he publiſhed new editions of his two principal works, with conſiderable additions, and ſome alterations.

Dr Law held the ſee of Carliſle almoſt 19 years; during which time he twice only omitted ſpending the ſummer months in his dioceſe at the biſhop's reſidence at Roſe Caſtle; a ſituation with which he was much pleaſed not only on account of the natural beauty of the place, but becauſe it reſtored him to the country, in which he had ſpent the beſt part of his life. In the year 1787 he paid this viſit in a ſtate of great weakneſs and exhauſtion; and died at Roſe about a month after his arrival there, on the 14th day of Auguſt, and in the 84th year of his age.

The life of the biſhop of Carliſle was a life of inceſſant reading and thought, almoſt entirely directed to metaphyſical and religious inquiries. Beſides the works already mentioned, he publiſhed, in 1734 or 1735, a very ingenious *Inquiry into the Ideas of Space, Time,* &c. in which he combats the opinions of Dr Clarke and his adherents on theſe ſubjects: but the tenet by which his name and writings are principally diſtinguiſhed, is "that Jeſus Chriſt, at his ſecond coming, will, by an act of his power, reſtore to life and conſciouſneſs the dead of the human ſpecies, who by their own nature, and without this interpoſition, would remain in the ſtate of inſenſibility to which the death brought upon mankind by the ſin of Adam had reduced them." He interpreted literally that ſaying of St Paul, 1 Cor. xv. 21. "As by man came death, "by man came alſo the reſurrection of the dead." This opinion had no other effect upon his own mind than to increaſe his reverence for Chriſtianity, and for its divine Founder. He retained it, as he did his other ſpeculative opinions, without laying, as many are wont to do, an extravagant ſtreſs upon their importance, and without pretending to more certainty than the ſubject allowed of. No man formed his own concluſions with more freedom, or treated thoſe of others with greater candour and equity. He never quarrelled with any perſon for differing from him, or conſidered that difference as a ſufficient reaſon for queſtioning any man's ſincerity, or judging meanly of his underſtanding. He was zealouſly attached to religious liberty, becauſe he thought that it leads to truth; yet from his heart he loved peace. But he did not perceive any repugnancy in theſe two things. There was nothing in his elevation to his biſhopric which he ſpoke of with more pleaſure, than its being a proof that decent freedom of inquiry was not diſcouraged.

He was a man of great ſoftneſs of manners, and of the mildeſt and moſt tranquil diſpoſition. His voice was never raiſed above its ordinary pitch. His countenance ſeemed never to have been ruffled; it preſerved the ſame kind and compoſed aſpect, truly indicating the calmneſs and benignity of his temper. He had an utter diſlike of large and mixed companies. Next to his books, his chief ſatisfaction was in the ſerious converſation of a literary companion, or in the company of a few friends. In this ſort of ſociety he would open his mind with great unreſervedneſs, and with a peculiar turn and ſprightlineſs of expreſſion. His perſon was low, but well formed: his complexion fair and delicate. Except occaſional interruptions by the gout, he had for the greateſt part of his life enjoyed good health; and when not confined by that diſtemper, was full of motion and activity. About nine years before his death, he was greatly enfeebled by a ſevere attack of the gout in his ſtomach; and a ſhort time after that, loſt the uſe of one of his legs. Notwithſtanding his fondneſs for exerciſe, he reſigned himſelf to this change, not only without complaint, but without any ſenſible diminution of his cheerfulneſs and good-humour. His fault (for we are not writing a panegyric) was the general fault of retired and ſtudious characters, too great a degree of inaction and facility in his public ſtation. The modeſty, or rather baſhfulneſs of his nature, together with an extreme unwillingneſs to give pain, rendered him ſometimes leſs firm and efficient in the adminiſtration of authority than was requiſite. But it is the condition of human morality. There is an oppoſition between ſome virtues which ſeldom permits them to ſubſiſt together in perfection.

The biſhop was interred with due ſolemnity in his cathedral church, in which a handſome monument is erected to his memory, bearing the following inſcription:

Columnæ hujus ſepultus eſt ad pedem
Edmundus Law, S. T. P.
per xix fere annos hujuſce eccleſiæ Epiſcopus.
In evangelica veritate exquirenda,
et vindicanda,
ad extremum uſque ſenectutem,
operam navavit indeſeſſam.
Quo autem ſtudio et affectu veritatem,
eodem et libertatem Chriſtianam coluit;
Religionem ſimplicem et incorruptam,
niſi ſalva libertate,
ſtare non poſſe arbitratus.
Obiit Aug. xiv. MDCCLXXXVII.
Ætat. lxxxiv.

LAWBURROWS, in Scots law. See Law, Part III. N° clxxxiii. 16.

LAWENBURG, Duchy, a territory of Germany, in the circle of Lower Saxony, bounded by the duchy of Holſtein on the north and weſt, by the duchy of Mecklenburg on the eaſt, and by the duchy of Lunenburgh, from which it is ſeparated by the river Elbe, on the weſt; being about 85 miles long, and 20 broad. The chief towns are Lawenburg, Mollen, Wittemburg, and Ratzeburg. It belongs to the elector of Hanover.

Lawenburg, a city of Germany in the circle of Lower Saxony, and capital of a duchy of the ſame name. It is a ſmall but populous town, ſituated on the Elbe, under the brow of a very high hill, from whence there is a delightful proſpect over the adjacent country. It has a caſtle on an eminence, and is convenient for trade. E. Long. 10. 51. N. Lat. 53. 36.

Lawenburg, a town of Germany in Farther Pomerania, and the chief place of a territory of the ſame name, belonging to the elector of Brandenburg.

LAWERS, an eminent engraver, who flouriſhed about the middle of the 16th century. He was a native of Flanders, and probably ſtudied under Paul Pontius, whoſe ſtyle of engraving he frequently imitated. He poſſeſſed a conſiderable ſhare of merit: but was by no means equal to that great maſter, either in the excellency of the handling of the graver, or knowledge of drawing. He engraved from ſeveral painters; but his beſt works are from the pictures of Rubens.

LAWES (Henry), a celebrated muſician, and the Purcell of his time. He was a ſervant to Charles I. in his public and private muſic, and ſet ſome of the works of almoſt evey poet of eminence in that reign. The comus of Milton, and ſeveral of the lyrics of Waller, were ſet by him; and both theſe poets have done him honour in their verſes. He compoſed a conſiderable number of pſalm-tunes in the *Cantica Sacra*, for three voices and an organ; and many more of his compoſitions are to be ſeen in a work called *Select airs and dialogues;* alſo in the *Treaſury of muſic*, and the *Muſical companion.* He died in 1662.

Lawes (William), was brother to the former, and a moſt capital muſician. He made above 30 ſeveral ſorts of muſic for voices and inſtruments; nor was there any inſtrument then in uſe, but he compoſed to it as aptly as if he had ſtudied that alone. In the muſical ſchool at Oxford are two large manuſcript volumes of his works in ſcore for various inſtruments. He was a commiſſary under general Gerard in the civil war, and, to the great regret of the king, was killed at the ſiege of Cheſter in 1645.

LAWLESS COURT, a court ſaid to be held annually on King's Hill at Rochford in Eſſex, on the Wedneſday morning after Michaelmas day at cock-crowing, where they whiſper, and have no candle, nor any pen and ink, but only a coal. Perſons who owe ſuit, or ſervice, and do not appear, forfeit double their rent every hour they are miſſing.

This ſervile attendance, Cambden informs us, was impoſed on the tenants for conſpiring at the like unſeaſonable hour to raiſe a commotion. The court belongs to the honour of Raleigh, and to the earl of Warwick; and is called *lawleſs*, from its being held at an unlawful hour.

LAWINGEN, a town of Germany, in the circle of Suabia; formerly imperial, but now ſubject to the duke of Neuburg. Here the duke of Bavaria, in 1704, fortified his camp to defend his country againſt the Britiſh forces and their allies commanded by the duke of Marlborough, who forced their intrenchments. It is ſeated on the Danube, in E. Long. 10. 29. N. Lat. 38. 32.

LAWN, a ſpacious plain in a park, or adjoining to a noble ſeat. As to the dimenſions of a lawn: In a large park, it ſhould be as extenſive as the ground will permit; and, if poſſible, it ſhould never be leſs than 50 acres: but in gardens of a moderate extent, a lawn of 10 acres is ſufficient; and in thoſe of the largeſt ſize, 15 acres. The beſt ſituation for a lawn is in the front of the houſe: and here, if the houſe front the eaſt, it will be extremely convenient; but the moſt deſirable aſpect for a lawn is that of the ſouth-eaſt. As to the figure of the lawn, ſome recommend an exact ſquare, others an oblong ſquare, ſome an oval, and others a circular figure: but neither of theſe are to be regarded. It ought to be ſo contrived, as to ſuit the ground; and there ſhould be trees planted for ſhade on the boundaries of the lawn, ſo the ſides may be broken by irregular plantations of trees, which, if there are not ſome good proſpects beyond the lawn, ſhould bound it on every ſide, and be brought round pretty near to each end of the houſe. If in theſe plantations round the lawn, the trees are placed irregularly, ſome breaking much forwarder on the lawn than others, and not crowded too cloſe together, they will make a better appearance than any regular plantations can poſſibly do; and if there are variety of trees, properly diſpoſed, they will have a good effect; but only thoſe which make a fine appearance, and grow large, ſtraight, and handſome, ſhould be admitted here. The moſt proper trees for this purpoſe, are the elm, oak, cheſnut, and beech; and if there are ſome clumps of ever-green trees intermixed with the others, they will add to the beauty of the whole, eſpecially in the winter-ſeaſon; the beſt ſorts for this purpoſe are lord Weymouth's pine, and the ſilver and ſpruce firs.

LAWN, in manufactures, a fine ſort of linen, remarkable for being uſed in the ſleeves of biſhops.

LAWRENCE (St), the largeſt river in North America, proceeding from the lake Ontario, from which it runs a courſe of 700 miles to the Atlantic ocean. It is navigable as far as Quebec, which is above 400 miles; but beyond Montreal it is ſo full of ſhoals and rocks, that it will not admit large veſſels without danger, unleſs the channel be very well known.

LAWSONIA, EGYPTIAN PRIVET: A genus of the monogynia order, belonging to the octandria claſs of plants; and in the natural method ranking with thoſe of which the order is doubtful. The calyx is quadrifid; the petals four; the ſtamina four in pairs; the capſule is quadrilocular and polyſpermous. There are two ſpecies, the inermis and ſpinoſa, both natives of India. Some authors take the firſt to be the plant termed by the Arabians *henna* or *alhenna*; the pulveriſed leaves of which are much uſed by the eaſtern nations for dying their nails yellow: but others, Dr Haſſelquiſt in particular, attribute that effect to the leaves of the other ſpecies of Egyptian privet which bears prickly branches. It is probable, that neither ſet of writers are miſtaken, and that the ſhrub in queſtion is a variety only of the thorny lawſonia, rendered mild by culture.

Alhenna grows naturally and is cultivated throughout India, as alſo in Egypt, Paleſtine, and Perſia. In thoſe countries, ſays Haſſelquiſt, it flowers from May to Auguſt. The leaves being pulveriſed, are made with water into a paſte, which the inhabitants of thoſe countries bind on the nails of their hands and feet, keeping it on all night. The deep yellow colour that is thus obtained is conſiderably permanent, not requiring to be renewed for ſeveral weeks. It would ſeem that this cuſtom is very ancient in Egypt; the nails of ſome mummies being found dyed in this manner. The dried flowers of henna afford a fragrant ſmell, which, it is affirmed, women with child cannot bear.

LAWYER, ſignifies a counſellor, or one that is learned or ſkilled in the law. See COUNSELLOR, BARRISTER, and SERJEANT.

LAY, a kind of ancient poem among the French, conſiſting of very ſhort verſes.

There were two ſorts of lays; the *great*, and the *little*. The firſt was a poem conſiſting of twelve couplets of verſes, of different meaſures. The other was a poem conſiſting of ſixteen or twenty verſes, divided into four couplets.

Theſe lays were the lyric poetry of the old French poets, who were imitated by ſome among the Engliſh. They were principally uſed on melancholy ſubjects, and are ſaid to have been formed on the model of the trochaic verſes of the Greek and tragedies.

Father Mourgues gives us an extraordinary inſtance of one of theſe ancient lays, in his Treatiſe of French Poetry:

Sur l'appuis du monde
Que faut il qu'on fonde,
D'eſpoir ?
Cette mer profonde,
En debris ſeconde
Fait voir
Calme au matin, l'onde
Et l'orage y gronde
Le ſoir.

LAY-Brothers, among the Romaniſts, thoſe pious but illiterate perſons, who devote themſelves in ſome convent to the ſervice of the religious. They wear a different habit from that of the religious; but never enter into the choir, nor are preſent at the chapters; nor do they make any other vow except of conſtantcy and obedience. In the nunneries there are alſo lay-ſiſters.

Lay-Man, one who follows a ſecular employment, and has not entered into holy orders.

LAYERS, in gardening, are tender ſhoots or twigs of trees, laid or buried in the ground, till, having ſtruck root, they are ſeparated from the parent-tree, and become diſtinct plants.—The propagating trees by *layers* is done in the following manner: The branches of the trees are to be ſlit a little way, and laid under the mould for about half a foot; the ground ſhould be firſt made very light, and after they are laid they ſhould be gently watered. If they will not remain eaſily in the poſition they are put in, they muſt be pegged down with wooden hooks: the beſt ſeaſon for doing this is, for ever greens, toward the end of Auguſt, and, for other trees, in the beginning of February. If they are found to have taken root, they are to be cut off from the main plant the ſucceeding winter, and planted out. If the branch is too high from the ground, a tub of earth is to be raiſed to a proper height for it. Some pare off the rhind, and others twiſt the branch before they lay it, but this is not neceſſary. The end of the layer ſhould be about a foot out of the ground; and the branch may be either tied tight round with a wire, or cut upwards from a joint, or cut round for an inch or two at the place, and it is a good method to pierce ſeveral holes through it with an awl above the part tied with the wire.

LAYING THE LAND, in navigation, the ſtate of motion which increaſes the diſtance from the coaſt, ſo as to make it appear lower and ſmaller, a circumſtance which evidently ariſes from the intervening convexity of the ſurface of the ſea. It is uſed in contradiction to *raiſing* the land, which is produced by the oppoſite motion of approach towards it. See LAND.

LAZAR-HOUSE, or LAZARETTO, a public building, in the nature of an hoſpital, to receive the poor, and thoſe afflicted with contagious diſtempers. In ſome places, lazarettos are appointed for the performance of quarantine; in which caſe, thoſe are obliged to be confined in them who are ſuſpected to have come from places infected with the plague.

LAYSTOFF, or LOWESTOFF, a town of Suffolk 117 miles from London, ſeems to hang over the ſea, and its chief buſineſs is fiſhing for cod in the north ſea, and for herring, mackarel, and ſprats at home. The church being three furlongs off, there is a chapel in the place. Having been a part of the ancient demeſnes of the crown, this town has a charter and a ſeal, by the former of which the inhabitants are exempted from ſerving on juries. Here is a market on Wedneſday, and two fairs in the year. Some take this to be the moſt eaſtern part of Britain.

LAZULI, or *Lapis Lazuli*, a ſpecies of zeolite belonging to the claſs of argillaceous earths. See CLAY, n° 7. It is of a blue colour. That which is of a fine blue inclining to purple, has obtained the name of Oriental; but the pale blue is leſs eſteemed. It is frequently variegated with yellow, and white ſhining veins and ſpeckles; which the common people take for gold and ſilver, though they are in truth nothing but marcaſites. The lapis lazuli has the following properties: 1. It retains its blue colour for a long time in a calcining heat; but changes at laſt to a brown. 2. It melts eaſily in the fire to a white frothy ſlag; which puffs up greatly when expoſed to the flame of a blow-pipe; but with a ſtrong heat in a covered veſſel, it becomes clear and ſolid, with blue clouds in it. 3. It does not ferment with acids; but, if boiled with oil of vitriol, it ſlowly diſſolves and loſes its blue colour. On adding a ſolution of fixed alkali, it precipitates a white earth, which being ſcorified with borax, yields a ſilver coloured regulus, varying in bigneſs according to the different ſpecimens of the ſtone. 4. By ſcorification with lead, it yields ſilver, ſometimes in the quantity of two ounces to a hundred weight of the ſtone. 5. Oil of vitriol diſcovers the preſence of ſilver more certainly in lapis lazuli than ſpirit of nitre. 6. On adding ſpirit of ſal ammoniac to any ſolution either of crude or calcined lapis lazuli, no blue colour is produced; a certain proof that it does not depend on copper; which is further confirmed by the fixity of the blue colour in the fire, and the colour of the ſlag or glaſs. 7. It is ſomewhat harder than the other kinds of zeolite, but does not approach to the hardneſs of quartz or other ſiliceous ſtones in general; for the pureſt and fineſt lapis lazuli may be rubbed into a white powder by means of ſteel, though it takes a poliſh like marble. 8. When perfectly calcined, it is a little attracted by the loadſtone; and when ſcorified with lead, the ſlag becomes of a greeniſh colour, not like that produced by copper, but ſuch as is always produced by iron mixed with a calcareous ſubſtance.

Mongez informs us, that ſome of the parts of lapis lazuli will ſtrike fire with ſteel. According to Cronſtedt, it is ſeldom found pure; but generally full of veins of quartz, limeſtone, and marcaſite: but for the experiments by which the abovementioned qualities were determined, the pureſt pieces were picked; ſuch as had been examined through a magnifying glaſs, and judged as free from heterogeneous mixture as poſſible. Our author expreſſes a wiſh that ſuch as are in poſſeſſion of any quantity of the ſtone would make farther experiments, in order to determine what ſubſtance it is which produces the blue colour ſo conſtant in the fire, ſince it cannot depend either on copper or iron; for though theſe metals, on certain occaſions, give a blue colour, yet they never produce any other but what inſtantly vaniſhes in the fire, and is deſtroyed by means of an alkali. "What is mentioned in ſeveral books (ſays he) can by no means be objected here; ſince in theſe proceſſes the ſilver employed is mixed with copper and other ſubſtances which contain a volatile alkali, whereby the blue colour is produced."

In the year 1761 M. Margraaf publiſhed ſome experiments on the lapis lazuli; in which he agrees in a great meaſure with Cronſtedt. According to him, the lapis lazuli does not contain any copper; but he found in it a calcareous and gypſeous ſubſtance, though he took care to pick out the very pureſt bits he could find. Engeſtrom, however, is of opinion, that the calcareous ſubſtance is not eſſential to lapis lazuli; as Cronſtedt ſays, that the lapis lazuli he tried did not ferment with acids. He farther mentions, that when diſſolved in any of the mineral acids, it always turned them into a jelly. Some of his experiments alſo ſeem to indicate, that all kinds of lapis lazuli do not contain ſilver though many of them do.

The lapis lazuli is found in many parts of the world; but that of Aſia and Africa is much ſuperior both in beauty and real value to the Bohemian and German kind, which is too often ſold in its place.

LEACHLADE, a town of Glouceſterſhire, in England 12 miles eaſt from Cirenceſter, 29 miles from Glouceſter, and 60 from London. The river Thames waters it on the ſouth and eaſt ſides, and divides it from Wiltſhire and Berkſhire. The Leach runs through the north ſide of the pariſh. The Thames river is navigable for barges of 50 tons burden, but want of water one part of the year makes the navigation very uncertain. Here is a ſmall market on Tueſday, and two fairs in the year. The church is a large handſome building, with double ailes, ſupported by two rows of fluted pillars.

LEAD, one of the imperfect metals, of a dull white colour inclining to blue, the leaſt ductile, the leaſt elaſtic, and the leaſt ſonorous, of the whole, poſſeſſes a conſiderable degree of ſpecific gravity, reaching from 11.3 to 11.479. It is found,

1. *Native.* Cronſtedt and ſome other mineralogiſts have doubted whether native lead was ever found in the earth, but the matter is now decided by innumerable teſtimonies. It appears from the Philoſophical Tranſactions for 1772, that ſome ſmall pieces of native lead were found in the county of Monmouth in Wales. It is ſaid alſo to be found in the Vivarrais in France. Bomare mentions a curious ſpecimen of native lead kept in the collection of the abbé Nolin at Paris, that had been found in the lead mines of *Pompean*, near Rennes in Brittany. It was very malleable, could be cut with a knife without crumbling, and eaſily melted over the flame of a candle. It weighed about two pounds; was imbedded in earthy lead ore of a reddiſh colour; and had a ſlaty vein that went through the middle of it.

2. *Lead ſpar*, is ſometimes tranſparent, but generally opake, and cryſtalized in regular forms of a laminar or ſtriated texture. Lead ochre, or native ceruſs, is the ſame ſubſtance, but in a looſe form, or indurated and ſhapeleſs. Sometimes it is found in a ſilky form. Both contain ſome iron, calcareous earth, and clay; and both grow red or yellowiſh when heated. They efferveſce with acids, and afford from 60 to 80 or 90 *per cent.* of lead. They are found in Brittany, Lorrain, Germany, and England.

M. Sage, of the royal academy of Paris, pretended, that the white lead ore from Poulawen in the county of Bretagne in France, was mineralized by the marine acid; but his miſtake was detected by the commiſſioners of that academy. This ore, according to the ſame academicians, is compoſed of ſtriated cryſtals, of a whitiſh pale red or grey colour. There is a lead ore of this kind ſometimes grey and ſometimes yellow, which is very heavy. Its ſtructure is either lamellated or fibrous, and its laminæ can hardly be ſeparated; but it is friable, and may be cut with a knife. Sometimes it is cryſtallized; and ſometimes its fibres are extremely thin, ſemitranſparent, and have a ſilky look. They efferveſce with acids, decrepitate in the fire, and ſeem to loſe the aerial acid by which the lead is mineraliſed.

The ſparry lead ore has often a ſemitranſparency like the ſparry fluor; its chryſtals being generally terminated by hexahedral priſms, or cylindrical columns, ſtriated, and apparently compoſed of a great number of filaments. Theſe ſparry chryſtals are always found in the ſame places with the galenas or ſulphurated lead ores; and ſeem to be formed from their decompoſition after the loſs of their ſulphur; ſo that it is not uncommon to find galenas which are beginning to paſs into a ſtate of white lead. There is a black ore of lead, which may be ſuppoſed to be an intermediate ſtate betwixt the white lead ore and galena, as it ſeems to be a true white lead tinged by the hepatic vapours of the ſulphur on its parting from the galena. There is alſo a green tranſparent lead, having a more or leſs yellowiſh caſt. It frequently has no regular form, and appears like a kind of moſs. When this green ore is cryſtallized, it conſiſts of hexhahedral truncated priſms, terminated by ſix-ſided pyramids, either entire or truncated near the baſe. Profeſſor Brunnich tells us, that the green and the black lead ores from Saxony, and the Hungarian blue ores, are priſmatic. According to Kirwan and Mongez, the green lead ores are either cryſtallized in needles as in Brittany, or in a looſe powder as in Saxony; but moſtly adhering to and inveſting quartz. They owe their green colour to iron, ſeldom containing any copper, and are very rare. Brunnich mentions a ſapphire-coloured ore once found among ſome white lead ſpar at Wendiſh Lemen. It was eaſily melted by the blow pipe. Natural red-lead or minium has been found in ſome Siberian mines. It is found either cryſtallized, or in ſhapeleſs maſſes, or in powder, in which it agrees with the brown or yellow ores. Dr J. R. Forſter brought ſome of this cryſtallized red lead ore from Ruſſia. The cryſtals were cubical, and the colour ſeemed rather pale. The red Siberian ores are perfectly rhombic; thoſe from Bohemia have a cubical or rhomboidal form. Sulphur and arſenic have been found in the red ones, but the others have not been ſufficiently inveſtigated. Moſt of them efferveſce with acids.

3. *Arſenical lead ſpar.* Conſtredt ſays that he tried an ore of this kind from an unknown place in Germany, and found that no metal could be melted from it by means of the blow-pipe as could be done by other ſpars; but by doing it in a crucible, that part of the arſenic which did not fly off was likewiſe reduced, and found in the form of grains diſperſed, and forced into the lead. Another ore ſimilar to this, and which likewiſe was not eaſily reduced by means of the blow-pipe, always ſhot into polygonal, but chiefly hexagonal cryſtals, after being melted, having ſhining ſurfaces. Profeſſor Brunnich obſerves, that theſe ores efferveſce with acids, and contain 40 *per. cent.* of lead.

4. The *bley-glanz* of the Germans contains lead mineralized with ſulphur alone, and of this there are two or three varieties. At Villach in Auſtria there is ſaid to be found a potters lead-ore containing not the ſmalleſt portion of ſilver.

5. *Lead mineraliſed by the vitriolic acid*, is generally in the form of a white maſs, ſoluble in 18 times its quantity of water. Sometimes it is blackiſh, and cryſtallized in very long ſtriæ, or in friable ſtalactites; this laſt variety effloreſces in the air, and is converted

into a true vitriol of lead. According to Mr Kirwan, it does not efferveſce nor is ſoluble in other acids, but may be reduced by laying it on a burning coal. It originates from the decompoſition of ſulphurated lead ores. Dr Withering informs us, that it is found in great quantity in the iſland of Angleſey; but united to iron, and not reducible by the blow-pipe or charcoal.

6. *Lead mineralized by the phoſphoric acid,* was lately diſcovered by Mr Gahn. It is of a greeniſh, yellow, or reddiſh colour, and does efferveſce, with acids. After ſolution in nitrous acid, the lead may be precipitated from this ore by the vitriolic acid. An hundred grains of lead are produced from 137 of this precipitate waſhed and dried. The decanted liquor evaporated to dryneſs affords the phoſphoric acid, from which the inflammable compound may be produced by diſtillation with charcoal. Seven ounces of this lead ore from the neighbourhood of Friburg, treated in the manner juſt mentioned, yielded by diſtillation 144 grains of phoſphorus. A compound ſimilar to this ore may be obtained by mixing pure phoſphoric acid (that is, ſuch as is combined with the volatile alkali, for the foſſile alkali in the microcoſmic ſalt hinders the operation) with red lead.

7. *Galena,* or *potters ore,* in which the metal is mineralized by ſulphurated ſilver. According to Mr Kirwan it is the moſt common of all the lead ores, of a bluiſh dark lead colour, formed of cubes of a moderate ſize, or in grains of a cubic figure, whoſe corners have been cut off; its texture lamellar, and its hardneſs varying in different ſpecimens. That which is formed into grains is ſuppoſed to be the richeſt in ſilver; but even this contains only about one or one and a half *per cent.* that is, about 12 or 18 ounces *per* quintal; and the pooreſt not above 60 grains. Ores that yield about half an ounce of ſilver *per* quintal are barely worth the extracting. Different ſpecimens alſo vary in the quantity of ſulphur they contain, from 15 to 25 *per cent.* and that which contains the leaſt is in ſome degree malleable. The proportion of iron in this ore is very ſmall, but the lead is from 60 to 85 *per cent.* M. Monnet aſſerts that galena is inſoluble in the nitrous acid; but Dr Watſon has ſhown, that it is completely diſſolved by the acid when diluted. The ſpecific gravity of galena is from 7.000 to 7.780. It yields a yellow ſlag when melted.

M. Fourcroy diſtinguiſhes ſeveral varieties of this ore. 1. Cubic galena, the cubes of which are of various ſizes, and found either ſingle or in groups; it is often found with the angles truncated, and is common at Freyberg. 2. In maſſes, without any regular configuration; very common at St Maire. 3. With large facets. It does not compoſe regular cryſtals, but is entirely formed of large laminæ. 4. With ſmall facets, appearing like mica, compoſed of white and very brilliant ſcales. It is called white ſilver ore, becauſe it contains a conſiderable quantity of that metal. 5. Small grained galena, ſo called becauſe it has a very cloſe grain. It is likewiſe very rich in ſilver, and is found with the foregoing ore. No galena, excepting that of Carinthia, is known to be without ſilver; but it has been obſerved, that thoſe which afford the moſt ſilver have the ſmalleſt facets. 6. Galena cryſtallized like lead ſpar, in hexagonal priſms or cylindrical columns, contains little ſilver, and ſeems to be merely ſpathoſe lead, mineralized without having loſt its form. Cryſtals of pure ſpathoſe lead entirely covered with a very fine galena, are ſometimes found in the ſame piece, together with others which are changed into galena throughout.

8. *Antimonial lead-ore,* in which the metal is mineralized by ſulphur with ſilver and regulus of antimony. This is of the ſame colour with galena, but its texture is different, being radiated, filamentous or ſtriated. When heated, it yields a white ſmoke; and it affords from 40 to 50 *per cent.* of lead, and from half an ounce to two ounces of ſilver *per* quintal.

9 *Pyritous lead-ore,* mineralized by ſulphur with ſilver and a large proportion of iron. This is of a brown or yellowiſh colour; of an oblong or ſtalactitical form; friable; and of a lamellar, ſtriated, or looſe texture; affording 18 or 20 *per cent.* of lead at moſt, which is obtained merely by melting it, the iron detaining the ſulphur. It is only a mixture of galena with the brown pyrites.

10. *Lead mineralized by arſenic,* was lately diſcovered in Siberia. It is of a pale colour externally, but internally of a deep red. It is for the moſt part cryſtallized in rhomboidal parallelopipeds, or irregular pyramids. Lehman ſays, that it contains ſulphur, arſenic, and about 34 *per cent.* of lead; and Mr Pallas ſays, that it contains ſome ſilver alſo. It was found near Catherineburg in Siberia; and Lehman ſays, that on being reduced to powder, it reſembled the beſt carmine. A ſpecimen examined by Mongez was of a yellow-greeniſh colour, and was found among quartz in the ſame country, and contained ſome arſenic. Both theſe, according to M. Magellan, may be eaſily reduced by means of a blow-pipe.

11. *Stony* or *ſandy lead ores,* conſiſt either of the calciform or the galena kind, intimately mixed and diffuſed through ſtones and earth, chiefly of the calcareous or barytic genus. To this ſpecies Mongez refers the earthy lead ore, falſely called *native maſſicot,* found in the lead mines of Pompean in Brittany, principally in ſolid pieces. Theſe are either yellowiſh or grey: they appear bright like glaſs when broken, and efferveſce with acids; whence it appears that the ore contains fixed air. Sometimes it is mixed with clay.

12. The mine of Morngenſtern at Freyberg has a peculiar variety of lead-ore containing ſilver, and which deſerves to be noticed on account of its yellowiſh-brown colour, and likewiſe on account of its ſingular figure, which conſiſts of ſlender cylinders. Sometimes it is found in dentritical forms, like the *knit cobalt.*

Moſt of the ores of lead contain ſilver; and thoſe kinds of galena which do not, are very ſcarce. In Hungary and Tranſylvania, the lead ore contains a quantity of gold as well as ſilver. Sometimes the potters ores are found ſo poor in ſilver, that it is not worth the expence of extracting it. Theſe, when free from mixtures of the rock, are employed without any fuſion to glaze earthern ware; and a conſiderable trade is carried on in the Mediterranean with ſuch ores from the mines of Sardinia and France.

Lead, expoſed to heat, melts long before it is ignited. By a ſtrong heat it becomes volatile, and flies off in vapours. If ſuffered to cool very ſlowly, and the melted portion be poured off from that which is become ſolid, it is found to be cryſtallized in quadrangular pyramids. When melted with the contact of air, it ſoon becomes covered with a grey dull pellicle, which by proper management is converted into minium, as explained under the article Chemistry; and by this operation it becomes heavier by about ten pounds in the hundred, though it is ſaid that at Nuremberg it gains twice as much. By too much heat minium loſes its beautiful red colour, and aſſumes that of a pale yellow: by a heat ſtill more violent, it melts into a tranſparent glaſs, ſo fuſible, that it penetrates the crucible and eſcapes. But if one part of ſand be added to three parts of calx of lead, the ſand melts, by the aſſiſtance of the calx, into a beautiful amber-coloured glaſs. With two parts of lead and one of ſand, it reſembles a topaz. A ſimilar quantity of the calx of lead, added to common glaſs, does not alter its tranſparence, but gives it a greater degree of weight, and more eſpecially a kind of unctuouſneſs, which renders it capable of being cut and poliſhed more eaſily without breaking. This glaſs is very proper for making achromatic lenſes; but is ſubject to veins, and to have a gelatinous appearance. "The Engliſh (ſays M. Fourcroy) call it *flint glaſs*; our workmen find great difficulty in ſelecting pieces of any conſiderable magnitude, exempt from ſtriæ, in that which is imported from England." This great imperfection ſeems, in Macquer's opinion, to depend on the principles of the glaſs not being uniformly combined: for that purpoſe it is neceſſary that it ſhould be kept in fuſion for a long time; but as the lead would by that means be diſſipated, the flint-glaſs would loſe a part of its denſity and unctuouſneſs, which are its chief merit.

M. Magellan tells us, that it is the pureſt calx of lead called *minium*, made immediately from the metal, and the moſt pure quartzous ſand, with pure mineral alkali, or rather with good nitre, that produce, when properly melted, the beſt flint-glaſs. The greater the proportion of red-lead, the heavier is the glaſs, and of courſe its refraction the greater; an eſſential requiſite for ſuch glaſs as is employed for the lenſes of achromatic teleſcopes. It muſt, however, be obſerved, that glaſs made with lead has the defect of being of unequal denſity, for want of a perfect mixture of all its parts; ſo that it is extremely difficult to find pieces of a few inches diameter among hundred weights of this glaſs, that ſhall be quite free from filaments and ſtriæ. By chance the late Mr Dollond procured a pot of pure flint-glaſs, from which he made the admirable triple object lenſes of three feet and a half focus, which have been ſo much admired; but no ſuch other glaſs has yet been found, though very conſiderable premiums have been offered for the method of producing the beſt kind of glaſs for optical inſtruments.

All the calces of lead, eſpecially minium, have a great attraction for fixed air. If therefore we ſhould deſire a calx of lead in perfect purity, it muſt be kept defended from the contact of air, or ſlightly calcined before it is uſed, in order to ſeparate the fixed air it may have abſorbed. When expoſed to the air, it tarniſhes in proportion to the dampneſs of the air, and contracts a white ruſt, which is not a pure calx, but combined with the fixed air imbibed from the atmoſphere. It is not altered by pure water; and therefore we muſt conclude, that the whitiſh cruſt with which the internal part of lead pipes through which water runs is uſually covered, muſt be owing to the ſaline ſubſtances contained in the water.

"All the phenomena of the calcination of lead (ſays M. Magellan), and of its reduction to the metallic ſtate, ſhow that it has the ſmalleſt adheſion to phlogiſton; as appears by the ſimple action of fire, which ſeparates both, whilſt their attraction is equally quick in its reduction to the metallic ſtate A common wafer, which owes its colour to red-lead, by being burned in the flame of a candle, immediately exhibits pure globules or little drops of the metal. The readineſs with which lead parts with its phlogiſton is ſhown by the curious experiment lately performed at Paris by Doctor Luzuriagu penſioner of the court of Spain. He put four ounces of lead-ſhot wetted with water into a pint-bottle filled with atmoſpheric air, and cloſed with a ſtopple. Having ſhaken it ſeveral times, a black powder was produced, which ſoon turned white: on opening the bottle at the end of 24 hours, the air was found to have loſt a fifth part of its bulk, and to have become phlogiſticated. Dephlogiſticated air was ſtill more reduced in bulk; but the contrary took place when inflammable air was employed."

Cauſtic alkaline lixivia, boiled on lead, diſſolve a ſmall quantity of it, and corrode more. It has been obſerved, that plants do not thrive ſo well in leaden as in earthen veſſels.

In Holland, and perhaps in other places, it has been cuſtomary to correct the moſt offenſive expreſſed oils, as that of rape-ſeed and rancid oils of almonds or olives, by impregnating them with lead. This dangerous abuſe may be diſcovered by mixing a little of that oil with a ſolution of orpiment made in lime-water: for, on ſhaking them together, and ſuffering them to reſt, the oil, if it has any ſaturnine tint, will appear of an orange red; but if pure, of a paleyellowiſh one. A ſimilar abuſe has alſo been practiſed with acid wines, which diſſolve as much of the lead as communicates a ſweetiſh taſte. This is diſcovered in a ſimilar manner; and upon this principle is founded the *liquor probatorius*, or teſt-liquor. This liquor is nothing elſe than a ſolution of orpiment or liver of ſulphur in lime-water. If a few drops of this ſolution be put in a glaſs of the ſuſpected liquor, it will exhibit a precipitation like a dark-coloured cloud. This is owing to the attachment of the lead to the ſulphur in the orpiment. If lead, or its calces, in powder, be mixed with a ſolution of hepar ſulphuris, a decompoſition enſues, but the alkali is not thus deprived of its ſulphur. Inſtead of this, it is re-converted into vitriolated tartar; the lead ſeizes the phlogiſton of the ſulphur, and allows the vitriolic acid to unite with the alkali.

Lead unites with moſt other metals. It cannot, however, be united with iron: but if both are expoſed to the fire in a proper veſſel, the lead ſcorifies the iron by ſeizing on its phlogiſton; after which it melts with the calx into a dark-coloured glaſs. This property which lead poſſeſſes, of reducing all the imperfect metals to a glaſs, is the reaſon of its being uſed in the purification of gold and ſilver; neither of which can be touched by it, but remain pure in the bottom of the cupel. This proceſs is the more complete by reaſon of the great efficacy of lead in diſſolving earthy bodies. In this reſpect it is ſo powerful a flux, that no earthern veſſel or crucible can contain it when fuſed, of whatever materials the veſſel be made. A mixture of raw and burned clay ſtands the action of lead for the greateſt length of time; but at laſt this alſo gives way, and is corroded in the ſides.

Litharge, a ſort of refuſe of lead, is employed in the compoſition of all the finer glaſſes called *paſtes*, which are deſigned as imitations of precious ſtones. The addition of litharge renders them more ſolid and brilliant. The principal ingredients are the pureſt of flint, purified alkali, borax, and litharge; the other additions, chiefly of metallic calces, are added, merely for the ſake of tinging them with various colours.

Lead is employed in making of various veſſels, as ciſterns for water, large boilers for chemical and other purpoſes, &c. It is frequently mixed with tin by the pewterers; a practice which M. Fourcroy ſets forth as very dangerous, and gives the following proceſs for detecting it: "Diſſolve two ounces of the ſuſpected metal in five ounces of a good pure nitrous acid. The calx of tin is to be waſhed with four pounds of diſtilled water, and dried, and the water evaporated by the heat of a water-bath. By this evaporation nitre of lead is procured; which being calcined, the weight of the reſidue ſhows the quantity of metal contained in the tin, allowing a few grains for the augmentation of weight ariſing from calcination, as well as the other metallic ſubſtances, ſuch as zinc and copper, which the tin under examination may contain. Bayan and Charlard by this method aſcertained, that fine wrought tin or pewter contains about 10 pounds of lead in the 100; and that the common tin ſold in France under that name, often contains 25 pounds in the ſame quantity; an enormous doſe, ſufficient to expoſe thoſe who uſe veſſels made of this compoſition to the greateſt danger."

There are ſeveral methods uſed by pewterers to diſcover the fineneſs of tin. This is done in ſome caſes by ſimple inſpection, the judgment being aſſiſted by the weight and noiſe produced in bending the metal. But the beſt method is by trying the ſpecific gravity of the metal; which will diſcover a very ſmall quantity of lead, the difference betwixt the two metals being ſo conſiderable.

Lead, when taken into the human body, is productive of various diſorders, particularly a dangerous kind of colic terminating in a palſy; and as all the common earthen ware is glazed with minium, the uſe of it cannot be ſuppoſed to be void of danger in all caſes. Fountains, or veſſels of lead which contain water, often communicate a noxious quality to it when ſuffered to remain long full. Its vapour is dangerous to the workmen who melt it, and the fumes falling upon the graſs render it poiſonous to the cattle who eat it; the fiſh who inhabit the waters near ſmelting houſes ſoon die, nor is it ſafe for any animal to drink of it. In caſes of poiſoning by lead, antimonial emetics are recommended. Navier preſcribes liver of ſulphur and hepatic waters. The internal uſe of lead is certainly dangerous, though it is often preſcribed in medicine; and even the external uſe of it is not altogether ſafe. Certain it is, that all workmen who deal much in lead, are ſubject to the cholic abovementioned from the habitual contact of the metal or its calces, even though they neither take it internally, nor are expoſed to its fumes.

Black LEAD *(Plumbago)*, a genus of inflammable ſubſtances, frequently confounded with *molybdæna*; the appearance of which is nearly the ſame, though the qualities are very different. Black-lead, when pure, is extremely black; but when freſh cut, appears of a bluiſh white, and ſhining like lead. It is micaceous, and minutely ſcaly; eaſily broken, and of a granular and dull appearance when broken. Its tract on paper is much darker than that of molybdæna, which has a fine ſilvery appearance; by which means they are eaſily diſtinguiſhed from one another. Black-lead is too ſoft to ſtrike fire with ſteel: it is inſoluble in acids; but in a very ſtrong fire, when expoſed to the air at the ſame time, it is entirely volatile, leaving only a little iron and a ſmall quantity of ſiliceous earth. It may be decompoſed by deflagration with nitre; but the common fluxes are not capable of procuring its fuſion. Its ſpecific gravity is from 1.987 to 2,267. According to Scheele, this ſubſtance conſiſts of phlogiſton combined with aerial acid; but M. Pelletier has ſhown, that when pure it neither produces fixed nor inflammable air; both which, when found, are entirely owing to the ſubſtances that are mixed with it. Mr Scheele ſays, that one part of plumbago requires ten of nitre to decompoſe it, but charcoal only five. The concluſion drawn from hence, *viz.* that plumbago contains twice as much phlogiſton as charcoal, however, is by no means juſt; for the phlogiſton may be defended from the action of the nitre, by means we cannot poſſibly know, in the one and not in the other, Dr Prieſtley's experiments on the diſſipation of charcoal into inflammable air alſo ſhow, that charcoal is little or nothing elſe than mere phlogiſton, ſo that no ſubſtance whatever can contain *more*. From theſe experiments Mr Kirwan concludes, that 100 parts of plumbago contain 67 of phlogiſton; becauſe 100 grains of nitre contain 33 of real nitrous acid; all of which are decompoſed when it receives as much phlogiſton as is neceſſary to convert it into nitrous acid, or a little more. But 33 grains of nitrous acid are converted into nitrous air by 67 grains of phlogiſton; the remaining 33 parts may be water, or other volatile ſubſtance. By the experiments of Meſſrs Gahn and Hielm, it appears, that 100 grains of plumbago, calcined in a muffle, loſt 90 grains in weight; the remainder being a ferruginous earth, and the ſulphureous ſmell ſhowed that it contained ſome pyrites, both which were accidental to the black lead. M. Pelletier, however, as has already been hinted, affirms, that plumbago is volatilized in a ſtrong fire, without producing any aerial vapour whatever; whence we muſt conclude, that the plumbago uſed by Scheele had not been quite pure. In cloſe veſſels, however, all agree, that black lead ſuſtains a vehement fire for a long time without any ſenſible diminution of weight. This is ſimilar to charcoal; which for a long time was ſuppoſed to be indeſtructible in cloſe veſſels: but Dr Prieſtley has ſhown, that in a very violent fire, in cloſe veſſels, charcoal begins to emit inflammable air, and continues to do ſo without any end of the proceſs that he could perceive; whence it is probable, that in this way alſo charcoal might be entirely diſperſed, provided we could find veſſels capable of ſuſtaining ſuch a long and vehement heat. No experiments have been made with black-lead in this way, either with the ſolar heat *in vacuo*, or with a violent heat in an iron or other veſſel capable of reſiſting a long continued heat.

Cronſtedt, when treating of this mineral, obſerves, that "Mr Pott examined it in cloſe veſſels, and Mr Quiſt in an open fire; from which difference in the mode of treatment, different notions had ariſen: becauſe the black-lead, when treated in cloſe veſſels, or when immediately put into a ſtrong charcoal fire, is almoſt unalterable; but in a calcining heat, becomes almoſt entirely volatile. This is the caſe with ſeveral of the other mineral phlogiſtons; and from this we may in general learn, how neceſſary it is to examine the mineral bodies by many and different methods, and to endeavour to multiply the experiments more than has hitherto been done."

With regard to the reduction of metallic calces, which ought to be accompliſhed by this *phlogiſtic* ſubſtance, M. Pelletier affirms, that it cannot be done unleſs the black-lead be mixed with fixed alkali, in the ſame manner as when charcoal is employed in ſuch circumſtances. It cannot be combined with iron, as Bergman aſſerts; nor with any other metal, though it may be ſimply interſperſed betwixt its particles. M. Pelletier indeed owns that there is a kind of plumbago found ſwimming over the melted iron in large furnaces where iron-ores are ſmelted; but he thinks, that this muſt have been naturally mixed with the mineral. It is alſo the only known plumbago of a very diſtinct lamellar form; as he obſerved in the pieces obtained from the iron works at Vallancy in the French province of Berry.

Black-lead is found of different kinds; *viz.* 1. Of a ſteel-grained and dull texture; naturally black, but when rubbed affording a dark lead colour. 2. Of a granulated and ſcaly appearance at the ſame time. It is found in different countries, as Germany, France, Spain, the Cape of Good Hope, and America; but generally in ſmall quantities, and of very different qualities. The beſt ſort, however, and the fitteſt of all for making pencils, is that met with in the county of Cumberland in England. It is found in ſuch plenty at a place called *Borrowdale* in Scotland, that hence not only the whole iſland of great Britain, but the whole continent of Europe, may be ſaid to be ſupplied. "I have ſeen (ſays M. Magellan) various ſpecimens from different countries; but their coarſe texture and bad quality cannot bear any compariſon with that of Borrowdale; though it ſometimes, but ſeldom, contains pyritaceous particles of iron. It is but a few years ago, that this mine ſeemed to be almoſt exhauſted; but by digging ſome few yards through the ſtrata underneath, according to the advice of an experienced miner, whoſe opinion had been long unattended to, a very thick and rich vein of the beſt black-lead has been diſcovered, to the great joy of the proprietors and advantage of the public."

The principal uſe of black-lead is for making pencils for drawing; which have the advantage of marking paper very diſtinctly for a time, though their traces may afterwards be entirely rubbed out by ſoft bread or elaſtic gum. To form the pencils, the lead is cut into thin parallelopipeds, and put into quadrangular grooves cut in pieces of cypreſs wood; and a ſlit being glued over, they are worked into ſmall cylinders like quills. A coarſer kind are made by working up the powder of black-lead with ſulphur, or ſome mucilaginous ſubſtance; but theſe anſwer only for carpenters, or ſome very coarſe drawings. One part of plumbago with three of clay, and ſome cows hair, make an excellent coating for retorts, as it keeps its form even after the retorts have melted. The famous crucibles of Ypſen are formed of plumbago mixed with clay. Theſe are known in Britain by the name of Heſſian crucibles; but a manufacture of the ſame kind is now eſtabliſhed at Chelſea in the neighbourhood of London, where crucibles are manufactured nearly of the ſame quality with the foreign ones. The powder of black-lead ſerves alſo to cover the ſtraps of razors; and it is with it that the caſt-iron work, ſuch as ſtoves, &c. receive a gloſs on their ſurface. An application, however, perhaps as uſeful as any other, is that of black-lead to ſmooth the ſurfaces of wooden work which are ſubjected to much friction, as wooden ſcrews, packers preſſes, &c.; neither greaſy nor oily ſubſtances, nor ſoapy ointments, produce ſuch a good effect upon them.

Milled LEAD. See CHEMISTY, n° 1219.

Poiſon of LEAD. See POISON.

Sheet LEAD. See PLUMBERY.

LEAF, a part of a plant extended into length and breadth in ſuch a manner as to have one ſide diſtinguiſhable from the other. This is Miller's definition. Linnæus denominates leaves "the organs of motion, or muſcles of the plant."—The leaves are not merely ornamental to plants; they ſerve very uſeful purpoſes, and make part of the organs of vegetation.

The greater number of plants, particularly trees, are furniſhed with leaves: in muſhrooms, and ſhrubby horſe-tail, they are totally wanting. Ludwig defines leaves to be fibrous and cellular proceſſes of the plant, which are of various figures, but generally extended into a plane membranaceous or ſkinny ſubſtance. They are of a deeper green than the foot-ſtalks on which they ſtand, and are formed by the expanſion of the veſſels of the ſtalk, among which, in ſeveral leaves, the proper veſſels are diſtinguiſhed by the particular taſte, colour, and ſmell, of the liquors contained within them.

By the expanſion of the veſſels of the ſtalk, are produced ſeveral ramifications or branches, which, croſſing each other mutually, form a kind of net; the meſhes or interſtices of which are filled up with a tender cellular ſubſtance, called the *pulp*, *pith*, or *parenchyma*. This pulpy ſubſtance is frequently conſumed by certain ſmall inſects, whilſt the membranous net remaining untouched exhibits the genuine ſkeleton of the leaf.

The net in queſtion is covered externally with an epidermis or ſcarf-ſkin, which appears to be a continuation of the ſcarf-ſkin of the ſtalk, and perhaps of that of the ſtem. M. Deſauſſure, a judicious naturaliſt, has attempted to prove, that this ſcarf-ſkin, like that of the petals, is a true bark, compoſed itſelf of an epidermis and cortical net; theſe parts ſeem to be the organs of perſpiration, which ſerve to diſſipate the ſuperfluous juices.

The cortical net is furniſhed, principally on the ſurface of the leaf, with a great number of ſuckers or abſorbent veſſels, deſtined to imbibe the humidity of the air. The upper ſurface, turned towards heaven, ſerves as a defence to the lower, which looks downward; and this diſpoſition is ſo eſſential to the vegetable economy, that, if a branch is overturned in ſuch a manner as to deſtroy the natural direction of the leaves, they will, of themſelves, in a very ſhort time, reſume their former poſition; and that as often as the branch is thus overturned.

Leaves, then, are uſeful and neceſſary organs; trees periſh when totally diveſted of them. In general, plants ſtript of any of their leaves, cannot ſhoot vigorouſly; witneſs thoſe which have undergone the depredations of inſects: witneſs, likewiſe, the very common practiſe of ſtripping off ſome of the leaves from plants, when we would ſuſpend their growth, or diminiſh the number of their ſhoots. This method is ſometimes obſerved with corn and the eſculent graſſes; and, in cold years, is practiſed on fruit-trees and vines, to render the fruit riper and better coloured: but in this caſe it is proper to wait till the fruits have acquired their full bulk, as the leaves contribute greatly to their growth, but hinder, when too numerous, that exquiſite rectifying of the juices, which is ſo neceſſary to render them delicious and palatable.

When vegetation ceaſes, the organs of perſpiration and inſpiration become ſuperfluous. Plants, therefore, are not always adorned with leaves: they produce new ones every year; and every year the greater part are totally diveſted of them, and remain naked during the winter. Se PLANT.

Leaf-Inſect. See CIMEX.

LEAF, in clocks and watches, an appellation given to the notches of their pinions.

Gold-Leaf, uſually ſignifies fine gold beaten into plates of an exceeding thinneſs, which are well known in the arts of gilding, &c. The preparation of gold-leaf, according to Dr Lewis, is as follows.

“ The gold is melted in a black-lead crucible, with ſome borax, in a wind-furnace, called by the workmen a *wind-hole*: as ſoon as it appears in perfect fuſion, it is poured out into an iron ingot mould, ſix or eight inches long, and three quarters of an inch wide, previouſly greaſed, and heated, ſo as to make the tallow run and ſmoke, but not to take flame. The bar of gold is made red-hot, to burn off the unctuous matter, and forged on an anvil into a long plate, which is further extended, by being paſſed repeatedly between poliſhed ſteel rollers, till it becomes a ribbon as thin as paper. Formerly the whole of this extenſion was procured by means of the hammer, and ſome of the French workmen are ſtill ſaid to follow the ſame practice: but the uſe of the flatting-mill both abridges the operation, and renders the plate of more uniform thickneſs. The ribbon is divided by compaſſes, and cut with ſheers into equal pieces, which conſequently are of equal weights: theſe are forged on an anvil till they are an inch ſquare; and afterwards well nealed, to correct the rigidity which the metal has contracted in the hammering and flatting. Two ounces of gold, or 960 grains, the quantity which the workmen uſually melt at a time, make 150 of theſe ſquares, whence each of them weighs ſix grains and two fifths; and as 902 grains of gold make a cubic inch, the thickneſs of the ſquare plates is about the 766th part of an inch.

“ In order to the further extenſion of theſe pieces into fine leaves, it is neceſſary to interpoſe ſome ſmooth body between them and the hammer, for ſoftening its blow, and defending them from the rudeneſs of its immediate action: as alſo to place between every two of the pieces ſome proper intermedium, which, while it prevents their uniting together, or injuring one another, may ſuffer them freely to extend. Both theſe ends are anſwered by certain animal membranes.

“ The gold-beaters uſe three kinds of membranes; for the outſide cover, common parchment made of ſheep-ſkin; for interlaying with the gold, firſt the ſmootheſt and cloſeſt vellum, made of calf-ſkin; and afterwards the much finer ſkins of ox-gut, ſtript off from the large ſtraight gut ſlit open, curiouſly prepared on purpoſe for this uſe, and hence called *gold-beater's ſkin*. The preparation of theſe laſt is a diſtinct buſineſs, practiſed by only two or three perſons in the kingdom, ſome of the particulars of which I have not ſatisfactorily learned. The general proceſs is ſaid to conſiſt, in applying one upon another, by the ſmooth ſides, in a moiſt ſtate, in which they readily cohere and unite inſeparably; ſtretching them on a frame, and carefully ſcraping off the fat and rough matter, ſo as to leave only the fine exterior membrane of the gut; beating them between double leaves of paper, to force out what unctuoſity may remain in them; moiſtening them once or twice with an infuſion of warm ſpices; and laſtly, drying and preſſing them. It is ſaid, that ſome calcined gypſum, or plaſter of Paris, is rubbed with a hare's foot both on the vellum and the ox-gut ſkins, which fills up ſuch minute holes as may happen in them, and prevents the gold-leaf from ſticking, as it would do to the ſimple animal-membrane. It is obſervable, that, notwithſtanding the vaſt extent to which the gold is beaten between theſe ſkins, and the great tenuity of the ſkins themſelves, yet they ſuſtain continual repetitions of the proceſs for ſeveral months, without extending or growing thinner. Our workmen find, that, after 70 or 80 repetitions, the ſkins, though they contract no flaw, will no longer permit the gold to extend between them; but that they may be again rendered fit for uſe by impregnating them with the virtue which they have loſt, and that even holes in them may be repaired by the dexterous application of freſh pieces of ſkin; a microſcopical examination of ſome ſkins that had been long uſed plainly ſhowed theſe repairs. The method of reſtoring their virtue is ſaid in the *Encyclopédie* to be, by interlaying them with leaves of paper moiſtened with vinegar white-wine, beating them for a whole day, and afterwards rubbing them over as at firſt with plaſter of Paris. The gold is ſaid to extend between them more eaſily, after they have been uſed a little, than when they are new.

“ The beating of the gold is performed on a ſmooth block of black marble, weighing from 200 to 600 pounds, the heavier the better; about nine inches ſquare on the upper ſurface, and ſometimes leſs, fitted into the middle of a wooden frame, about two feet ſquare, ſo as that the ſurface of the marble and the frame form one continuous plane. Three of the ſides are furniſhed with a high ledge; and the front, which is open, has a leather flap faſtened to it, which the gold-beater takes before him as an apron, for preſerving the fragments of gold that fall off. Three hammers are employed, all of them with two round and ſomewhat convex faces, though commonly the workman uſes only one of the faces: the firſt, called the *cutch-hammer*, is about four inches in diameter, and weighs 15 or 16 pounds, and ſometimes 20, though few workmen can manage thoſe of this laſt ſize: the ſecond, called the *ſhodering-hammer*, weighs about 12 pounds, and is about the ſame diameter: the third called the *gold-hammer*, or *finiſhing-hammer*, weighs 10 or 11 pounds, and is nearly of the ſame width. The French uſe four hammers, differing both in ſize and ſhape from thoſe of our workmen: they have only one face, being in figure truncated cones. The firſt has very little convexity, is near five inches in diameter, and weighs 14 or 15 pounds: the ſecond is more convex than the firſt, about an inch narrower, and ſcarcely half its weight: the third, ſtill more convex, is only about two inches wide, and four or five pounds in weight: the fourth or finiſhing hammer is near as heavy as the firſt, but narrower by an inch, and the moſt convex of all. As theſe hammers differ ſo remarkably from ours, I thought proper to inſert them, leaving the workmen to judge what advantage one ſet may have above the other.

"A hundred and fifty of the pieces of gold are interlaid with leaves of vellum, three or four inches ſquare, one vellum leaf being placed between every two of the pieces, and about 20 more of the vellum leaves on the outſides; over theſe is drawn a parchment caſe, open at both ends, and over this another in a contrary direction, ſo that the aſſemblage of gold and vellum leaves is kept tight and cloſe on all ſides. The whole is beaten with the heavieſt hammer, and every now and then turned upſide down, till the gold is ſtretched to the extent of the vellum; the caſe being from time to time opened for diſcovering how the extenſion goes on, and the packet, at times, bent and rolled as it were between the hands, for procuring ſufficient freedom to the gold, or, as the workmen ſay, to make the gold work. The pieces, taken out from between the vellum leaves, are cut in four with a ſteel knife; and the 600 diviſions, hence reſulting, are interlaid, in the ſame manner, with pieces of the ox-gut ſkins five inches ſquare. The beating being repeated with a lighter hammer till the golden plates have again acquired the extent of the ſkins, they are a ſecond time divided in four: the inſtrument uſed for this diviſion is a piece of cane cut to an edge, the leaves being now ſo light, that the moiſture of the air or breath condenſing on a metalline knife would occaſion them to ſtick to it. Theſe laſt diviſions being ſo numerous, that the ſkins neceſſary for interpoſing between them would make the packet too thick to be beaten at once, they are parted into three parcels, which are beaten ſeparately, with the ſmalleſt hammer, till they are ſtretched for the third time to the ſize of the ſkins: they are now found to be reduced to the greateſt thinneſs they will admit of; and indeed many of them, before this period, break or fail. The French workmen, according to the minute detail of this proceſs, given in the *Encyclopédie*, repeat the diviſion and the beating once more; but as the ſquares of gold, taken for the firſt operation, have four times the area of thoſe uſed among us, the number of leaves from an equal area is the ſame in both methods, *viz.* 16 from a ſquare inch. In the beating, however ſimple the proceſs appears to be, a good deal of addreſs is requiſite, for applying the hammers ſo as to extend the metal uniformly from the middle to the ſides: one improper blow is apt not only to break the gold leaves, but to cut the ſkins.

"After the laſt beating, the leaves are taken up by the end of a cane inſtrument, and, being blown flat on a leather-cuſhion, are cut to a ſize, one by one, with a ſquare frame of cane made of a proper ſharpneſs, or with a frame of wood edged with cane: they are then fitted into books of 25 leaves each, the paper of which is well ſmoothed, and rubbed with red-bole to prevent their ſticking to it. The French, for ſizing the leaves, uſe only the cane-knife; cutting them firſt ſtraight on one ſide, fitting them into the book by the ſtraight ſide, and then paring off the ſuperfluous parts of the gold about the edges of the book. The ſize of the French gold leaves is from ſomewhat leſs than three inches to three and three quarters ſquare; that of ours, from three inches to three and three-eighths.

"The proceſs of gold-beating is conſiderably influenced by the weather. In wet weather, the ſkins grow ſomewhat damp, and in this ſtate make the extenſion of the gold more tedious: the French are ſaid to dry and preſs them at every time of uſing; with care not to overdry them, which would render them unfit for farther ſervice. Our workmen complain more of froſt, which appears to affect the metalline leaves themſelves: in froſt, a gold-leaf cannot eaſily be blown flat, but breaks, wrinkles, or runs together.

"Gold-leaf ought to be prepared from the fineſt gold; as the admixture of other metals, though in too ſmall a proportion to ſenſibly affect the colour of the leaf, would diſpoſe it to loſe of its beauty in the air. And indeed there is little temptation to the workman to uſe any other; the greater hardneſs of alloyed gold occaſioning as much to be loſt in point of time and labour, and in the greater number of leaves that break, as can be gained by any quantity of alloy that would not be at once diſcoverable by the eye. All metals render gold harder and more difficult of extenſion: even ſilver, which in this reſpect ſeems to alter its quality leſs than any other metal, produces with gold a mixture ſenſibly harder than either of them ſeparately, and this hardneſs is in no art more felt than in the gold-beater's. The French are ſaid to prepare what is called the *green gold-leaf*, from a compoſition of one part of copper and two of ſilver with eighty of gold. But this is probably a miſtake: for ſuch an admixture gives no greenneſs to gold: and I have been informed by our workmen, that this kind of leaf is made from the ſame fine gold as the higheſt gold-coloured ſort, the greeniſh hue being only a ſuperficial teint induced upon the gold in ſome part of the proceſs: this greeniſh leaf is little otherwiſe uſed than for the gilding of certain books.

"But though the gold-beater cannot advantageouſly diminiſh the quantity of gold in the leaf by the admixture of any other ſubſtance with the gold, yet means have been contrived, for ſome particular purpoſes, of ſaving the precious metal, by producing a kind of leaf called *party-gold*, whoſe baſis is ſilver, and which has only a ſuperficial coat of gold upon one ſide; a thick leaf of ſilver and a thinner one of gold, laid flat on one another, heated and preſſed together, unite and cohere; and being then beaten into fine leaves, as in the foregoing proceſs, the gold, though its quantity is only about one-fourth of that of the ſilver, continues every where to cover it, the extenſion of the former keeping pace with that of the latter.

LEAGUE, a meaſure of length, containing more or fewer geometrical paces, according to the different uſages and cuſtoms of countries. A league at ſea, where it is chiefly uſed by us, being a land-meaſure moſtly peculiar to the French and Germans, contains 3000 geometrical paces, or three Engliſh miles. The French league ſometimes contains the ſame meaſure, and in ſome parts of France it conſiſts of 3500 paces: the mean or common league conſiſts of 2400 paces, and the little league of 2000. The Spaniſh leagues are larger than the French, 17 Spaniſh leagues making a degree, or 20 French leagues, or 69½ Engliſh ſtatute-miles. The Dutch and German leagues contain each four geographical miles. The Perſian leagues are pretty near of the ſame extent with the Spaniſh; that is, they are equal to four Italian miles: which is pretty near to what Herodotus calls the length of the Perſian Paraſang, which contained 30 ſtadia, eight whereof, according to Strabo, make a mile. The word comes from *leuca*, or *leuga*, an ancient Gauliſh word for an itinerary meaſure, and retained in that ſenſe by the Romans. Some derive the word *leuca* from λευκος, "white;" as the Gauls, in imitation of the Romans, marked the ſpaces and diſtances of their roads with white ſtones.

League alſo denotes an alliance or confederacy between princes and ſtates for their mutual aid, either in attacking ſome common enemy, or in defending themſelves. The word comes from *liga*, which in the corrupt Latin was uſed for a *confederacy: Qua quis cum alio ligatur*.

Leagues, among the Greeks, were of three ſorts: 1. Σπονδη, Συνθηκη, or Ειρηνη, whereby both parties were obliged to ceaſe from hoſtilities, without even moleſting the allies of each other; 2. Επιμαχια, whereby they engaged to lend aſſiſtance to each other in caſe of invaſion; and, 3. Συμμαχια, whereby they engaged to have the ſame friends and enemies, and to aſſiſt each other upon all occaſions. All theſe leagues were confirmed with oaths, and imprecations, and ſacrifices. The victims moſt generally uſed were a boar, ram, or goat, ſometimes all three; and ſometimes bulls and lambs. They cut out the teſticles of the animal, and ſtood upon them while they ſwore; and ſome of the hair of the victim was diſtributed to all preſent. Then they cut the animal's throat, which was called ορκια τεμνειν, in Latin, *ferire fædus*.—This done, they repeated their oaths and imprecations, calling the gods to witneſs the honeſty of their intentions. A libation was then made of wine, which at this time was mixed, to imply their conjunction and union: while this was pouring out, they prayed that the blood of him who ſhould break the treaty might be poured out in like manner. Upon theſe occaſions no part of the victim was eaten. Still further to encreaſe the ſolemnity of this obligation, the league was engraven upon braſs, fixed up in places of public concourſe, and ſometimes read at the ſolemn games. Some exchanged certain Συμβολα or *teſſeræ* upon the occaſion, and frequently ſent ambaſſadors, on ſome appointed day to keep them in mind of their engagements to each other.

The ceremonies of the Romans in making leagues were performed by the *Feciales*. See Feciales.

Leagues of the Griſons, are a part of Switzerland, conſiſting of three ſubdiviſions, *viz.* the upper league, the league of the houſe of God, and the league of the ten juriſdictions. See the article Grisons.

The League, by way of eminence, denotes that famous one on foot in France, from the year 1576 to 1593. Its intent was to prevent the ſucceſſion of Henry IV. who was of the reformed religion, to the crown; and it ended with his abjuration of that faith.

The *leaguers*, or confederates, were of three kinds. The *zealous leaguers* aimed at the utter deſtruction not only of the Huguenots, but alſo of the miniſtry. The *Spaniſh leaguers* had principally in view the transferring the crown of France to the king of Spain, or the infanca his daughter. The *moderate leaguers* aimed only at the extirpation of Calviniſm, without any alteration of the government.

LEAK, at ſea, is a hole in the ſhip, through which the water comes in. A ſhip is ſaid to *ſpring a leak* when ſhe begins to *leak* or to let in the water. The manner of ſtopping a leak is to put into it a plug wrapped in oakum and well tarred, or in a tarpawling clout, which keeps out the water, or nailing a peice of ſheet lead on the place. Seamen ſometimes ſtop a leak by thruſting a piece of ſalt beef into it. The ſea-water, ſays Mr Boyle, being freſher than the brine imbibed by the beef, penetrates into its body, and cauſes it to ſwell ſo as to bear ſtrongly againſt the edges of the broken plank, and thereby ſtops the influx of the water.—A ready way to find a leak in a ſhip is to apply the narrower end of a ſpeaking trumpet to the ear, and the other to the ſide of the ſhip where the leak is ſuppoſed to be; then the noiſe of the water iſſuing in at the leak will be heard diſtinctly, whereby it may be diſcovered.

LEAKAGE, the ſtate of a veſſel that leaks, or lets water or other liquid ooze in or out.

Leakage, in commerce, is an allowance of 12 *per cent.* in the cuſtoms, allowed to importers of wines for the waſte or damage it is ſuppoſed to have received in the paſſage: an allowance of two barrels in 22 is alſo made to the brewers of ale and beer by the exciſe-office.

LEAKE (Richard), maſter-gunner of England, was born at Harwich in 1629, and was bred to the ſea. At the reſtoration, he was made maſter-gunner of the Princeſs, a frigate of 50 guns; and in the firſt Dutch war diſtinguiſhed himſelf by his ſkill and bravery in two extraordinary actions; one againſt 15 ſail of Dutch men of war; and another in 1667 againſt two Danes in the Baltic, in which the commanding officers of the Princeſs being killed or deſperately wounded, the command, according to the rules of war at that time, fell to the gunner. In 1669, he was promoted to be gunner of the Royal Prince, a firſt-rate man of war. He was engaged, with his two ſons Henry and John, in the battle againſt Van Tromp, in 1673; when the Royal Prince had all her maſts ſhot away, near 400 of her men killed and diſabled, and moſt of her upper tier of guns diſmounted. As ſhe lay thus like a wreck, a great Dutch man of war came down upon her with two fire-ſhips, either to burn or carry her off; and Captain Rooke, afterwards Sir George, thinking it impoſſible to defend her, ordered the men to ſave their lives, and the colours to be ſtruck. Mr Leake hearing this, ordered the lieutenant off the quarter-deck, and took the command upon himſelf, ſaying, "The Royal Prince ſhall never be given up to the enemy while I am alive to defend her." The undaunted ſpirit of the brave gunner inſpired the ſmall reſidue of the ſhip's company with reſolution: they returned with alacrity to the fight, and under the direction of this valiant gunner and his two ſons ſunk both the fire-ſhips, and obliged the man of war to ſheer off; and having thus ſaved the Royal Prince, he brought her into Chatham. But Mr Leake's joy in obtaining this victory was damped by the loſs of Henry, his eldeſt ſon, who was killed near him. Soon after, Mr Leake was preferred to the command of a yacht, and alſo made gunner of Whitehall. In 1677, he obtained a grant for life of the office of maſter-gunner of England, and ſtore-keeper of the ordnance at Woolwich. By theſe poſts he had full ſcope for his genius. He accordingly, among other things, invented the cuſhee-piece; and contrived to fire a mortar by the blaſt of a piece, which has been uſed ever ſince. He was alſo the principal contriver of what the French call *infernals*, uſed at the bombardment at St Malo's in 1693. Mr Leake had a ſurpriſing genius for all inventions of this kind; and had frequent trials of ſkill with French and Dutch gunners and engineers in Woolwich warren, at which king Charles II. and the duke of York were often preſent, and he never failed to excel all his competitors: nor was he leſs ſkilled in the art of making compoſitions for fireworks; of which he likewiſe made frequent trials with equal ſucceſs.

Leake (Sir John), an Engliſh admiral, diſtinguiſhed by his bravery and ſucceſs, was born in 1656, and was taught mathematics and gunnery by Mr Richard Leake his father, who was maſter-gunner of England. Entering early into the navy, he diſtinguiſhed himſelf under his father in 1673, in the memorable engagement between Sir Edward Spragg and Van Tromp, when but 16 years of age; and being afterwards made captain he ſignalized himſelf, among other occaſions, by executing the deſperate attempt of convoying ſome victualers into Londonderry, which obliged the enemy to raiſe the ſiege; and at the famous battle of La Hogue. In. 1702, being made commodore of a ſquadron, he deſtroyed the French trade and ſettlements at Newfoundland, and reſtored the Engliſh to the poſſeſſion of the whole iſland. On his return he was created rear admiral; ſoon after, he was made vice-admiral of the blue, and was afterwards knighted. He was engaged with admiral Rook in taking Gibraltar: ſoon after which, he particularly diſtinguiſhed himſelf in the general engagement off Malaga; when commanding the leading ſquadron of the van, conſiſting only of ſix ſhips, he drove that of the enemy, conſiſting of 13, out of the line of battle, ſo diſabled that they never returned to the fight. In 1705, he relieved Gibraltar, which the French had beſieged by ſea, and the Spaniards by land, ſo ſeaſonably, that the enemy was to have attacked the town that very night in ſeveral places, and would undoubtedly have made themſelves maſters of it. Five hundred Spaniards had, by the help of rope-ladders, climbed up the rocks by a way that was thought inacceſſible. At the ſame time they had got a great number of boats to land 3000 men at the New Mole, who, by making a vigorous aſſault on the ſide next the ſea, were to draw the garriſon to oppoſe that attack, while the 500 concealed men ruſhed into the town. Theſe being the next day drawn by hunger out of their ambuſcade, were diſcovered; on which Sir John aſſiſting the garriſon with ſailors and marines, they were attacked with ſuch vigour, that, though they had taken an oath not to ſurrender to the Engliſh, 190 common ſoldiers and 30 officers took quarter; 200 were killed on the ſpot; and the reſt, who endeavoured to make their eſcape, fell headlong down the rock. He was ſoon after made vice-admiral of the white, and then twice relieved that fortreſs. The laſt time, he attacked five ſhips of the French fleet coming out of the bay, of whom two were taken, and two run aſhore and were deſtroyed: baron Pointi died ſoon after, of the wounds he received in the battle; and in a few days the enemy raiſed the ſiege. In the year 1705, Sir John was engaged in the reduction of Barcelona; and the next year relieved that city, when it was reduced to the laſt extremity, and obliged king Philip to raiſe the ſiege. Soon after he took the city of Carthagena; from whence proceeding to Alicant and Joyce, both theſe ſubmitted to him; and he concluded the exploits of that year with the reduction of the city and iſland of Majorca. Upon his return home, prince George of Denmark made him a preſent of a ring valued at 400 l. and he had the honour of receiving 1000 l. from the queen as a reward for his ſervices. Upon the unhappy death of Sir Cloudeſly Shovel, in 1707, he was made admiral of the white, and commander in chief of her majeſty's fleet; and the next year, ſurpriſing a convoy of the enemy's corn, he ſent it to Barcelona, and thus ſaved both that city and the confederate army from the danger of famine: ſoon after, convoying the new queen of Spain to king Charles her conſort, her majeſty made him a preſent of a diamond ring of 500 pounds value. He then proceeded to the iſland of Sardinia, which he reduced to the obedience of king Charles; and ſoon after aſſiſted the lord Stanhope in the conqueſt of Minorca. Then returning home, he was appointed one of the council to the lord high admiral; and in 1709, was made rear admiral of Great Britain. He was ſeveral times choſen member of parliament for Rocheſter; and in 1712 conducted the Engliſh forces to take poſſeſſion of Dunkirk. But upon the acceſſion of king George I. he was ſuperſeded, and allowed a penſion of 600 l. a-year. After this he lived privately till his death, which happened at his houſe in Greenwich in 1720.

Leake (Stephen Martin, Eſq;) ſon of Captain Martin, went through different ranks in the heralds office till he came to the garter. He was the firſt perſon who wrote profeſſedly on Engliſh coins, two editions of his "Hiſtorical Account" of which were publiſhed by him with plates, under the title of *Nummi Britannici Hiſtoria*, London, 1726, 8vo; the ſecond, much improved, London, 1745, 8vo. He printed, in 1750, "The life of Sir John Leake, knight, admiral of the fleet," &c. to whom he was indebted for a conſiderable eſtate; which the Admiral deviſed to truſtees for the uſe of his ſon for life; and upon his death to Captain Martin (who married Lady Leake's ſiſter) and his heirs: By which means it came to the Captain's ſon; who, in gratitude to the memory of Sir John Leake, wrote an accurate account of his life, of which only 50 copies were printed. In 1766, he printed alſo 50 copies of "The Statutes of the Order of the Garter," 4to. He died in 1773; and was buried in his chancel in the pariſh-church of Thorp in Eſſex, of which manor he was lord.

LEANDER, in poetic hiſtory, a young man of Abydos in Aſia. He uſed to ſwim over the Helleſpont by night to viſit Hero his miſtreſs, who ſet forth a light to guide him: but in a tempeſtuous winter-night he was drowned; upon which Hero ſeeing him dead on the ſhore, caſt herſelf headlong from the tower, and died alſo. See Hero.

LEAO, in natural hiſtory, a mineral ſubſtance approaching to the nature of the lapis lazuli, found in the Eaſt Indies, and of great uſe in the Chineſe porcelain manufactures, being the fineſt blue they are poſſeſſed of. This ſtone is found in the ſtrata of pit-coal, or in thoſe of a yellowiſh or reddiſh earth in the neighbour hood of the veins of coal. There are often found pieces of it lying on the ſurface of the ground, and theſe are a ſure indication that more will be found on digging. It is generally found in oblong pieces of the ſize of a finger, not round, but flat. Some of this is very fine, and ſome coarſe and of a bad colour. The latter is very common; but the fine ſort is ſcarce, and greatly valued. It is not eaſy to diſtinguiſh them at ſight, but they are found by experiment; and the trying one piece is generally ſufficient for judging of the whole mine, for all that is found in the ſame place is uſually of the ſame ſort.

The manner of preparing it for uſe is this: They firſt waſh it very clean, to ſeparate it from the earth or any other foulneſs it may have: they then lay it at the bottom of their baking furnaces; and when it has been thus calcined for three or four hours, it is taken out, and powdered very fine in large mortars of porcelain, with ſtone peſtles faced with iron. When the powder is perfectly fine, they pour in boiling water, and grind that with the reſt, and when it is thoroughly incorporated, they add more, and finally pour it off after ſome time ſettling. The remainder at the bottom of the mortar, which is the coarſer part, they grind again with more water; and ſo on till they have made the whole fine, excepting a little dirt or grit. When this is done, all the liquors are mixed together, and well ſtirred. They are ſuffered to ſtand two or three minutes after this, and then poured off with the powder remaining in them: this is ſuffered to ſubſide gradually, and is the fine blue uſed in their beſt works, the common ſmalt ſerving for the blue of all the common china ware.

LEAP, in muſic, is when the ſong does not proceed by conjoint degrees, as when between each note there is an interval of a third, a fourth, fifth, &c.

Leap-Year. See Year, and Chronology, n° 24.

Lovers-Leap. See Leucata.

LEAPING, or Vaulting, was an exerciſe much uſed both amongſt the Greeks, and Romans. The Grecians called it Αλμα, and performed it with weights upon their heads and ſhoulders. Sometimes they carried the weights in their hands, which were of different figures, but generally oval and made with holes or covered with thongs, through which the contenders put their fingers. Theſe weights were called Αλτηρες. The conteſt was who could leap the higheſt and fartheſt. The place from whence they jumped was called Βατης, and that to which they leaped, εσκαμμενα, becauſe the ground was there dug up. This exerciſe was performed in the ſame manner by the Romans.

LEAR, the name of a Britiſh king, ſaid in old chronicles to have ſucceeded his father Bladud, about A. M. 3160. The ſtory of this king and his three daughters, is well known from Shakeſpeare's excellent tragedy founded on it.

LEASE, from the French *laiſer*, *demittere*, "to let," in law, a demiſe, or letting of lands, tenements, or hereditaments, unto another for life, term of years, or at will, for a rent reſerved.

A leaſe is either written, called an *indenture*, *deed-poll*, or *leaſe* in writing; or by word of mouth, called *leaſe parole*.

All eſtates, intereſts of freehold, or terms for years in lands, &c. not put in writing and ſigned by the parties, ſhall have no greater effect than as eſtates at will; unleſs it be of leaſes not exceeding three years from the making; wherein the rent reſerved ſhall be two-thirds of the value of things demiſed. Leaſes exceeding three years muſt be made in writing; and if the ſubſtance of a leaſe be put in writing, and ſigned by the parties, though it be not ſealed, it ſhall have the effect of a leaſe for years, &c.

An *aſſignment* differs from a leaſe only in this; that by a leaſe one grants an intereſt leſs than his own, reſerving to himſelf a reverſion; in aſſignments he parts with the whole property, and the aſſignee ſtands to all intents and purpoſes in the place of the aſſignor.

Leaſe, in Scots law. See Tack.

Leaſe and *Releaſe*, a ſpecies of conveyance uſed in the Engliſh law, firſt invented by Serjeant Moore, ſoon after the ſtatute of uſes, and now the moſt common of any, and therefore not to be ſhaken; though very great lawyers (as particularly Mr Noy) have formerly doubted its validity. It is thus contrived. A leaſe, or rather bargain and ſale, upon ſome pecuniary conſideration, for one year, is made by the tenant of the freehold to the leſſee or bargainee. Now this, without any inrolment, makes the bargainor ſtand ſeiſed to the uſe of the bargainee, and veſts in the bargainee the *uſe* of the term for a year; and then the ſtatute immediately annexes the *poſſeſſion*. He therefore, being thus in poſſeſſion, is capable of receiving a releaſe of the freehold and reverſion, which muſt be made to a tenant in poſſeſſion: and accordingly, the next day, a releaſe is granted to him. This is held to ſupply the place of livery of ſeiſin; and ſo a conveyance by leaſe and releaſe is ſaid to amount to a feoffment.

LEASH, among ſportſmen, denotes three creatures of any kind; but chiefly gre-hounds, foxes, bucks, and hares.

The term *leaſh* alſo ſignifies a line to hold in a hunting dog; and a ſmall long thong of leather, by which a falconer holds his hawk.

LEASING-MAKING, in Scots law, the uttering of words tending to excite diſcord between the king and his people; alſo called *verbal ſedition*.

LEATHER, the ſkin of ſeveral ſorts of beaſts dreſſed and prepared for the uſe of various manufacturers, whoſe buſineſs it is to make them up.

Dyeing of LEATHER, *Skins*, &c. *Blue* is given by ſteeping the ſubject a day in urine and indigo, then boiling it with alum: or it may be given by tempering the indigo with red-wine, and waſhing the ſkins therewith. *Red* is given by waſhing the ſkins, and laying them two hours in galls, then wringing them out, dipping them in a liquor made with liguſtrum, alum, and verdigris in water; and laſtly, in a dye made of brazil-wood, boiled with ley. *Purple* is given by wetting the ſkins with a ſolution of roche alum in warm water; and, when dry again, rubbing them with the hand with a decoction of log-wood in colder. *Green* is given by ſmearing the ſkin with ſap-green and alum-water boiled. *Dark green* is alſo given with ſteel-filings and ſal armoniac ſteeped in urine till ſoft, then ſmeared over the ſkin; which is to be dried in the ſhade. *Sky-colour* is given with indigo ſteeped in boiling water, and the next morning warmed and ſmeared over the ſkin. *Yellow*, by ſmearing the ſkin over with aloes and linſeed-oil diſſolved and ſtrained; or by infuſing it in weld. *Orange-colour* is given by ſmearing with fuſtic berries boiled in alum-water; or, for a deep orange, with turmeric.

Proceſſes for Dyeing LEATHER Red *and* Yellow *as practiſed in* Turkey, *with directions for Preparing and Tanning the Skins; as communicated by Mr* Philippo, *a native of* Armenia, *who received from the Society for the Encouragemeut of Arts, &c. one hundred pounds, and alſo the gold medal of the Society, as a reward for diſcovering this ſecret.*

1. *Firſt Preparation of the Skins, both for Red and Yellow Leather, by dreſſing them in Lime.* Let the ſkins, dried with the hair on, be firſt laid to ſoak in clean water for three days; let them then be broken over the fleſh-ſide, put into freſh water for two days longer, and afterwards hung up to drain half an hour. Let them now be broken on the fleſh-ſide, limed in cold lime on the ſame ſide, and doubled together with the grain-ſide outward. In this ſtate they muſt be hung up within-doors over a frame for five or ſix days, till the hair be looſe; which muſt then be taken off, and the ſkins returned into the lime-pit for about three weeks. Take them out, and let them be well worked fleſh and grain, every ſixth or ſeventh day during that time: after which, let them be waſhed ten times in clear water, changing the water at each waſhing. They are next to be prepared in drench, as below mentioned.

2. *Second Preparation of the Skins for both the Red and Yellow Dyes by drenching.* After ſqueezing the water out of the ſkins, put them into a mixture of bran and water, warm as new milk, in the following proportions; viz. about three pounds of bran for five ſkins, and water ſufficient to make the mixture moderately fluid, which will be about a gallon to each pound of bran. In this drench let the ſkins lie three days; at the end of which time they muſt be well worked, and afterwards returned into the drench two days longer. They muſt then be taken out and rubbed between the hands; the water ſqueezed from them, and the bran ſcraped off clear from both ſides of the ſkins. After this they muſt be again waſhed ten times in clear water, and the water ſqueezed out of them.

Thus far the preparatory proceſs of all the ſkins, whether intended to be dyed red or yellow, is the ſame; but afterwards thoſe which are to be died red, muſt be treated as follows.

3. *Preparations in Honey and Bran of the Skins that are to be dyed Red.* Mix one pound of honey with three pints of luke-warm water, and ſtir them together till the honey is diſſolved. Then add two double handfuls of bran; and taking four ſkins (for which the above quantity of the mixture will be ſufficient) work them well in it one after another. Afterwards fold up each ſkin ſeparately into a round form, with the fleſh-ſide inwards; and lay them in an earthen pan, or other proper veſſel; if in the ſummer, by the ſide of each other; but in the winter, on the top of each other. Place the veſſel in a ſloping poſition, ſo that ſuch part of the fluid as may ſpontaneouſly drain from the ſkins, may paſs from them. An acid fermentation will then riſe in the liquor, and the ſkins will ſwell conſiderably. In this ſtate they muſt continue for ſeven or eight days; but the moiſture that drains from them muſt be poured off, once or twice a-day, as occaſion may require. After this a further preparation in ſalt is neceſſary; and which muſt be performed in the following manner.

4. *Preparation in Salt, of the Skins to be dyed Red.* After the ſkins have been fermented in the honey and bran, as abovementioned, let them be taken out of that mixture on the eighth or ninth day, and well rubbed with dry common ſea-ſalt, in the proportion of about half a pound to each ſkin; the ſalt muſt be well rubbed and worked with them. This will make them contract, again and part with a further conſiderable quantity of moiſture; which muſt be ſqueezed out by drawing each ſkin ſeparately through the hand. They muſt next be ſcraped clean on both ſides from the bran, ſuperfluous ſalt, and moiſture that may adhere to them. After which, dry ſalt muſt be ſtrewed over the grain-ſide, and well rubbed in with the hands. They are then to be doubled with the fleſh ſide outwards, lengthwiſe from neck to tail, and a little more dry ſalt muſt be thinly ſtrewed over the fleſh-ſide, and rubbed in; for the two laſt operations, about a pound and a half of ſalt will be ſufficient for each ſkin. They muſt then be put, thus folded on each other, between two clean boards, placed ſloping, breadthwiſe; and a heavy weight laid on the upper board, in order gradually to preſs out what moiſture they will thus part with. In this ſtate of preſſure, they muſt be continued two days or longer, till it is convenient to dye them, for which they will then be duly prepared.

5. *Preparations of the Red Dye, in a proper proportion for four ſkins.* Put eight gallons of water into a

copper, with ſeven ounces of ſhenan (A) tied up in a linen bag. Light a fire under a copper; and when the water has boiled about a quarter of an hour, take out the bag of ſhenan, and put into the boiling fluid or lixivium, 1ſt, two drams of alum; 2dly, two drams pomegranate bark; 3dly, three quarters of an ounce of turmeric; 4thly, three ounces of cochineal; 5thly, two ounces of loaf-ſugar. Let the whole mixture boil about ſix minutes, then cover the fire, and take out a quart of liquor, putting it into a flat earthen pan; and when it is as cold as new milk, take one ſkin, folded lengthwiſe, the grain-ſide outwards, and dip it in the liquor, rubbing it gently with the hands. Then taking out the ſkin, hang it up to drain, and throw away the ſuperfluous dye. Proceed in the ſame manner with the remaining three ſkins: repeating the operation of each ſkin ſeparately, eight times, ſqueezing the ſkins by drawing them through the hands before each freſh dipping. Lay them now on one ſide of a large pan, ſet ſloping, to drain off as much of the moiſture as will run from them without preſſure, for about two hours, or till they are cold; then tan them as below directed.

6. *Tanning the Red Skins.* Powder four ounces of the beſt white galls in a marble mortar, ſifting it thro' a fine ſieve. Mix the powder with about three quarts of water, and work the ſkins well in this mixture for half an hour or more, folding up the ſkins four-fold. Let them lie in this tan for 24 hours; when they muſt be worked again as before; then taken out, ſcraped clean on both ſides from the firſt galls, and put into a like quantity of freſh galls and water. In this freſh mixture they muſt be again well worked for three quarters of an hour; then folded up as before, and left in the freſh tan for three days. On the fourth day they muſt be taken out, waſhed clean from the galls in ſeven or eight freſh quantities of water, and then hung up to dry.

7. *Manner of Dreſſing Skins after they are tanned.* When the ſkins have been treated as above, and are very near dry, they ſhould be ſcraped with the proper inſtrument or ſcraper on the fleſh-ſide, to reduce them to a proper degree of thickneſs. They are then to be laid on a ſmooth board, and glazed by rubbing them with a ſmooth glaſs. After which they muſt be oiled, by rubbing with olive-oil, by means of a linen rag, in the proportion of one ounce and a half of oil for four ſkins: they are then to be grained on a graining-board, lengthwiſe, breadthwiſe, and cornerwiſe, or from corner to corner.

8. *Preparations with Galls for the Skins to be dyed. Yellow.* After the four ſkins are taken out of the drench of bran, and clean waſhed as before directed in the ſecond article, they muſt be very well worked, half an hour or more, in a mixture of a pound and a half of the beſt white galls, finely powdered, with two quarts of clean water. The ſkins are then to be ſeparately doubled lengthwiſe, rolled up with the fleſh-ſide outwards, laid in the mixture, and cloſe preſſed down on each other, in which ſtate they muſt continue two whole days. On the third day let them be again worked in the tan; and afterwards ſcraped clean from the galls, with an ivory or braſs inſtrument (for no iron muſt touch them). They muſt then be put into a freſh tan, made of two pounds of galls finely powdered, with about three quarts of water, and well worked therein 15 times. After this they muſt be doubled, rolled up as before, and laid in the ſecond tan for three days. On the third day a quarter of a pound of white ſea-ſalt muſt be worked into each ſkin; and the ſkins doubled up as before, and returned into the tan, till the day following, when they are to be taken out, and well waſhed ſix times in cold water, and four times in water lukewarm. The water muſt be then well ſqueezed out, by laying the ſkins under preſſure, for about half an hour, between two boards, when a weight of about 200 or 300 pounds laid upon the uppermoſt board, when they will be ready for the dye.

9. *Preparation of the Yellow Dye, in the proper proportion for four Skins.* Mix ſix ounces of the caſſiari gehira (B), or dgehira, or the berries of the eaſtern rhamnus, with the ſame quantity of alum; and pound them together till they be fine, in a marble or braſs mortar with a braſs peſtle. Then dividing the materials, thus powdered, into three equal parts of four ounces each, put one of thoſe three parts into about a pint and a half of water, in a china or earthen veſſel, and ſtir the mixture together. Let the fluid ſtand to cool, till it will not ſcald the hand. Then ſpreading one of the ſkins flat on a table, in a warm room, with the grain-ſide uppermoſt, pour a fourth part of the tinging liquor, prepared as above directed, over the upper or grain-ſide, ſpreading it equally over the ſkin with the hand, and rubbing it well in. Afterwards do the like with the other three ſkins, for which the mixture firſt made will be ſufficient.

This operation muſt be repeated twice more on each ſkin ſeparately, with the remaing eight ounces of the powder of the berries, and alum with the abovementioned due proportions of hot water, put to them as before directed.

(A) Shenan is a drug much uſed by dyers in the Eaſt; and may eaſily be procured at any of the ports of Syria and Africa, in the Levant. It is the Eaſtern jointed-kali, called by botaniſts *ſalicornia;* and grows in great plenty in thoſe and other parts of the the eaſt. There is a leſſer ſpecies of the ſalicornia on the coaſt of Britian which from its great affinity with the ſhenan, might be preſumed to have the ſame qualities. On ſome trials, however, it has not appeared to anſwer the intention of the ſhenan; but it will not be prudent to purſue the examination of this further, as ſome unknown circumſtances in the collecting or uſing the Engliſh ſalicornia might occaſion the miſcarriage. But be this as it may, the Eaſtern ſhenan may, at all events, be eaſily procured in any quantity, at a very trifling expence, by any of the captains of Turkey ſhips, at Aleppo, Smyrna, &c.

(B) The caſſiari gehira is the berries of an eaſtern rhamnus, or buckthorn-tree; and may be had at Aleppo, and other parts of the Levant, at a ſmall price. The common Avignon or yellow berries may be ſubſtituted, but not with ſo good an effect; the caſſiari gehira being a ſtronger and brighter yellow dye, both for this uſe and alſo that of colouring paper-hangings, &c.

The ſkins, when dyed, are to be hung up on a wooden frame, without being folded, with the grain-ſide outwards, about three quarters of an hour to drain; when they muſt be carried to a river or ſtream of running water, and well waſhed therein ſix times or more. After this they muſt be put under preſſure for about an hour, till the water be well ſqueezed out; afterwards the ſkins muſt be hung up to dry in a warm room.

This being done, the ſkins are to be dreſſed and grained as before directed for thoſe dyed red; except the oiling, which muſt be omitted.

Blacking LEATHER. In the tanning of leather it is ſo much impregnated with the aſtringent parts of oak-bark, or with that matter which ſtrikes a black with green vitriol, that rubbing it over three or four times with a ſolution of the vitriol, or with a ſolution of iron made in vegetable acids, is ſufficient for ſtaining it black. Of this we may be convinced by dropping a little of the ſolution on the unblacked ſide of common ſhoe-leather. This operation is performed by the currier: who, after the colouring, gives a gloſs to the leather with a ſolution of gum-arabic and ſize made in vinegar. Where the previous aſtringent impregnation is inſufficient to give due colour, and for thoſe ſorts of leather which have not been tanned, ſome galls or other aſtringents are added to the ſolution of iron; and in many caſes, particularly for the finer ſorts of leather, and for renewing the blackneſs, ivory or lamp-black are uſed. A mixture of either of theſe with linſeed oil makes the common oil-blacking. For a ſhining blacking, ſmall beer or water are taken inſtead of oil, in the quantity of about a pint to an ounce of the ivory-black, with the addition of half an ounce of brown ſugar and as much gum-arabic. The white of an egg, ſubſtituted for the gum, makes the black more ſhining, but is ſuppoſed to hurt the leather, and make it apt to crack. It muſt be obvious, however, that all theſe compoſitions admit of a great many variations.

Gilding of LEATHER. Take glair of the whites of eggs, or gum water, and with a bruſh rub over the leather with either of them; then lay on the gold or ſilver, and, letting them dry, burniſh them. See the articles GILDING and BURNISHING.

To dreſs or cover LEATHER *with Silver or Gold.* Take brown-red; grind or move it on a ſtone with a muller, adding water and chalk; and when the latter is diſſolved, rub or lightly daub the leather over with it, till it looks a little whitiſh; and then lay on the leaf-ſilver or gold before the leather is quite dry, laying the leaves a little over each other, that there may not be the leaſt part uncovered; and when they have well cloſed with the leather, and are ſufficiently dried on and hardened, rub them over with an ivory poliſher, or the foretooth of a horſe.

LEAVEN, a piece of ſour dough, uſed to ferment and render light a much larger quantity of dough or paſte. See BREAD, BARM, and BAKING.

Leaven was ſtrictly forbidden by the law of Moſes during the ſeven days of the paſſover; and the Jews, in obedience to this law, very carefully purified their houſes from all leaven as ſoon as the vigil of the feaſt began. Nothing of honey or leaven was to have place in any thing preſented to the Lord, upon his altar, during this ſolemnity. If during the feaſt, the leaſt particle of leaven was found in their houſes, they imagined the whole was polluted, for a little leaven leaveneth the whole lump. Leaven, in its figurative ſenſe, ſignifies the bad paſſions of envy and malice, and rancour, which ſour the temper, and extend their ferment over the ſocial affections; whereas unleavened bread implies ſincerity and truth. It is frequently uſed for any kind of moral contagion.

LEAVES OF PLANTS. See LEAF.

Colours extracted from LEAVES. See COLOUR-MAKING, n° 37.

LEBADEA, or LEBADIA, an ancient town of Bœotia, on the borders of Phocis, ſituated between Helicon and Chæronea, near Coronæa. In it ſtood the oracle of Jupiter Trophonius, which whoever went to conſult, deſcended into a ſubterraneous gulf.

LEBEDA, an ancient ſea-port town of Africa, in the kingdom of Tripoli, with a pretty good harbour, and an old caſtle, ſeated on the Mediterranean Sea; in E. Long. 14. 50. N. Lat. 32. 10.

LEBEDOS, reckoned among the twelve ancient cities of Ionia, was ſituated to the ſouth of Smyrna. It was the reſidence of ſtage-players, and the place where they met from all parts of Ionia, as far as the Helleſpont, and celebrated annual games in honour of Bacchus, (Strabo). It was overthrown by Lyſimachus, who removed the inhabitants to Epheſus; ſcarce ever after recovering itſelf, and becoming rather a village than a town, (Horace.)

LEBEN, or LEBENA, (anc. geog.) one of the port-towns of the Gortynians, near the promontory Leon, on the ſouth-eaſt ſide of Crete; famous for a temple of Æſculapius in imitation of that of Cyrenaica.

LEBRIXA, an ancient, ſtrong, and pleaſant town of Spain, in Andaluſia; ſeated on a territory abounding in corn, wine, and a great number of olive-trees, of whoſe fruit they make the beſt oil in Spain. W. Long. 5. 32. N. Lat. 36. 52.

LEBUS, a town of Germany, in the circle of Upper Saxony, and in the marquiſate of Brandenburg, with a biſhop's ſee, ſecularized in favour of the houſe of Brandenburg. It is ſeated on the river Oder, in E. Long. 14. 55. N. Lat. 52. 28.

LECCE, a rich, populous, and moſt beautiful town of Italy, in the kingdom of Naples and in the Terra d'Otranto, of which it is the chief place, and the ſee of a biſhop. E. Long. 18. 20. N. Lat. 40. 38.

LECCO, a town of Italy, in the duchy of Milan, ſeated on the eaſtern ſide of the lake Como. E. Long. 9. 40. N. Lat. 45. 45.

LECHLADE, a town of Glouceſterſhire in England, ſeated at the confluence of the river Lech with the Thames. W. Long. 2. 15. N. Lat. 51. 42.

LECHNICH, a town of Germany in the circle of the Lower Rhine, and in the electorate of Cologne. E. Long. 6. 35. N. Lat. 50. 40.

LECTI, beds or couches, were of two kinds amongſt the Romans, as being deſtined to two different uſes, to lie upon at entertainments, and to repoſe upon for nightly reſt. The firſt were called *lecti tricliniares*, the other *lecti cubicularii*. See BEDS.

LECTICA, was a litter or vehicle, in which the Romans were carried. It was of two kinds, covered and uncovered. The covered lectica is called by Pliny *cubiculum viatorum*, a traveller's bed-chamber: And indeed we are informed that Auguſtus frequently ordered his ſervants to ſtop his litter that he might ſleep upon the road. This vehicle was carried by ſix or eight men called *lecticarii*. The lectica differed from the *ſella*, for in the firſt the traveller could recline himſelf for ſleep, in the latter he was obliged to ſit. The lectica was invented in Bithynia; the ſella was a Roman machine, and eſteemed the more honourable of the two. Lectica was alſo the name of the funeral bed or bier for carrying out the dead.

LECTICARII, among the Romans, ſervants who carried the LECTICA.

LECTICARIUS was alſo an officer in the Greek church, whoſe buſineſs it was to bear off the bodies of thoſe who died, and to bury them. Theſe were otherwiſe denominated *decani* and *copiatæ*.

LECTIO, *reading*. Conſidered in a medicinal view, it is ſaid by Celſus, lib. i. cap. 4. to be bad, eſpecially after ſupper, for thoſe whoſe heads are weak; and in lib. 1. cap. 8. he recommends reading with an audible voice for ſuch as have weak ſtomachs. It is alſo directed by Paulus Æginetus as an exerciſe, lib. 1. cap. 19.

LECTISTERNIUM, a ſolemn ceremony obſerved by the Romans in times of public danger, wherein an entertainment was prepared with great magnificence, and ſerved up in the temples. The gods were invited to partake of the good cheer, and their ſtatutes placed upon couches round the table in the ſame manner as men uſed to ſit at meat. The firſt lectiſternium held at Rome was in honour of Apollo, Latona, Diana, Hercules, Mercury, and Neptune, to put a ſtop to a contagious diſtemper which raged amongſt the cattle, in the year of Rome 354. At theſe feaſts the Epulones preſided, and the ſacred banquet was called *epulum*. See EPULO, EPULUM, &c.

Something like the lectiſternium was occaſionally obſerved among the Greeks, according to Caſaubon.

LECTORES, among the Romans, ſervants in great mens houſes, who were employed in reading while their maſters were at ſupper. They were called by the Greeks ANAGNOSTÆ.

LECTOURE, an ancient and ſtrong town of France, in Gaſcony, with a caſtle and a biſhop's ſee; ſeated on a mountain at the foot of which runs the river Gers. E. Long. 0. 42. N. Lat. 43. 56.

LECTURERS, in England, are an order of preachers in pariſh churches, diſtinct from the rector, vicar, and curate. They are choſen by the veſtry, or chief inhabitants of the pariſh, ſupported by voluntary ſubſcriptions and legacies, and are uſually the afternoon preachers in the Sunday ſervice. The term is alſo more generally applied to thoſe who preach on Sunday, or on any ſtated day of the week, in churches, or other places of public worſhip. By 13 & 14 Car. II. cap. 4. lecturers in churches, unlicenſed, and not conforming to the liturgy, ſhall be diſabled, and ſhall alſo ſuffer three months impriſonment in the common goal; and two juſtices, or the mayor in a town corporate, ſhall, upon certificate from the ordinary, commit them accordingly. Where there are lectures founded by the donations of pious perſons, the lecturers are appointed by the founders without any interpoſition or conſent of rectors of churches, &c. though with the leave and approbation of the biſhop; ſuch as that of Lady Moyer's at St Paul's. But the lecturer is not intitled to the pulpit, without the conſent of the rector or vicar, who is poſſeſſed of the freehold of the church.

LEDA, (fab. hiſt.) a daughter of king Theſpius and Eurythemus, who married Tyndarus king of Sparta. She was ſeen bathing in the river Eurotas by Jupiter, when ſhe was ſome few days advanced in her pregnancy, and the god, ſtruck with her beauty, reſolved to deceive her. He perſuaded Venus to change herſelf into an eagle, while he aſſumed the form of a ſwan, and after this metamorphoſis Jupiter, as if fearful of the tyrannical cruelty of the bird of prey, fled through the air into the arms of Leda, who willingly ſheltered the trembling ſwan from the aſſaults of his ſuperior enemy. The careſſes with which the naked Leda received the ſwan, enabled Jupiter to avail himſelf of his ſituation, and nine months after this adventure the wife of Tyndarus brought forth two eggs, of one of which ſprung Pollux and Helena, and of the other Caſtor and Clytemneſtra. The two former were deemed the offspring of Jupiter, and the others claimed Tyndarus for their father. Some mythologiſts attribute this amour to Nemeſis and not to Leda; and they farther mention, that Leda was entruſted with the education of the children which ſprung from the eggs brought forth by Nemeſis. To reconcile this diverſity of opinions, others maintain that Leda received the name of *Nemeſis* after death. Homer and Heſiod make no mention of the metamorphoſis of Jupiter into a ſwan, whence ſome have imagined that the fable was unknown to theſe two ancient poets, and probably invented ſince their age.

LEDBURY, a town of Herefordſhire in England. It is a well-built town ſeated on a rich clay ſoil, and inhabited moſtly by clothiers, who carry on a pretty large trade. W. Long. 2. 27. N. Lat. 52. 6.

LEDESMA, an ancient and ſtrong town of Spain, in the kingdom of Leon, ſeated on the river Tome, in W. Long. 5. 25. N. Lat 47. 2.

LEDGER, the principal book wherein merchants enter their accounts. See BOOK-KEEPING.

LEDUM, MARSH CISTUS, or *Wild Roſemary*: A genus of the monogynia order, belonging to the decandria claſs of plants; and in the natural method ranking under the 18th order, *Bicornes*. The calyx is quinquefid; the corolla plain and quinquepartite; the capſule quinquelocular, and opening at the baſe. There is but one ſpecies, viz. the paluſtre, with very narrow leaves. This grows naturally upon bogs and moſſes in many parts of Yorkſhire, Cheſhire, and Lancaſhire; riſing with a ſlender ſhrubby ſtalk about two feet high, dividing into many ſlender branches, garniſhed with narrow leaves, not much unlike thoſe of heath. The flowers are produced in ſmall cluſters at the end of the branches, and are ſhaped like thoſe of the ſtrawberry-tree, but ſpread open wider at top. Theſe are of a reddiſh colour, and in the natural places of their growth are ſucceeded by ſeed-veſſels filled with ſmall ſeeds which ripen in autumn.—This plant is with great difficulty kept in a garden; for as it naturally grows upon bogs, unleſs the plants have a ſimilar ſoil they will not thrive. They muſt be procured from the places of their growth, and taken up with good roots; otherwiſe they will not live.

LEE, an epithet uſed by ſeamen to diſtinguiſh that part of the hemiſphere to which the wind is directed, from the other part whence it ariſes; which latter is accordingly called *to windward*. This expreſſion is chiefly uſed when the wind croſſes the line of a ſhip's courſe, ſo that all on a ſide of her is called *to windward*, and all on the oppoſite ſide *to leeward*. Hence,

Under the Lee, implies farther to the leeward, or farther from that part of the horizon whence the wind blows: as,

Under the Lee *of the ſhore; i. e.* at a ſhort diſtance from the ſhore which lies to windward. This phraſe is commonly underſtood to expreſs the ſituation of a veſſel anchored, or ſailing under the weather-ſhore, where there is always ſmoother water, and leſs danger of heavy ſeas, than at a great diſtance from it.

Lee Larches, the ſudden and violent rolls which a ſhip often takes to the leeward in a high ſea, particularly when a large wave ſtrikes her on the weather-ſide.

Lee-Side, all that part of a ſhip or boat which lies between the maſt and the ſide fartheſt from the direction of the wind; or otherwiſe, the half of a ſhip, which is preſſed down towards the water by the effort of the ſails, as ſeparated from the other half by a line drawn through the middle of her length. That part of the ſhip which lies to windward of this line is accordingly called the *weather-ſide*. Thus admit a ſhip to be ſailing ſouthward, with the wind at eaſt, then is her ſtarbord or right ſide the *lee ſide;* and the larboard, or left, the *weather-ſide*.

Lee-Stone. See *Lee-Penny*.

Lee-Way. See Navigation.

LEE (Nathaniel), a very eminent dramatic poet of the laſt century, was the ſon of a clergyman, who gave him a liberal education.—He received his firſt rudiments of learning at Weſtminſter ſchool; from whence he went to Trinity-college, Cambridge.—Going to London, however, his inclination prompted him to appear on the theatre; but he was not more ſucceſsful in repreſenting the thoughts of other men, than many a genius beſides, who have been equally unfortunate in treading the ſtage, although they knew ſo well how to write for it. He produced 11 tragedies, all of which contain a very great portion of true poetic enthuſiaſm. None, if any, ever felt the paſſion of love more truly; nor could any one deſcribe it with more tenderneſs. Addiſon commends his genius highly; obſerving, that none of the Engliſh poets had a happier turn for tragedy, although his natural fire and unbridled impetuoſity hurried him beyond all bounds of probability, and ſometimes were quite out of nature. The truth is, this poet's imagination ran away with his reaſon; ſo that at length he became quite crazy; and grew ſo mad, that his friends were obliged to confine him in bedlam, where he made that famous witty reply to a coxcomb ſcribbler, who had the cruelty to jeer him with his misfortune, by obſerving that it was an eaſy thing to write like a madman:—"No (ſaid Lee), it is not an eaſy thing to write like a madman; but it is very eaſy to write like a fool." Lee had the good fortune to recover the uſe of his reaſon ſo far as to be diſcharged from his melancholy confinement; but he did not long ſurvive his enlargement, dying at the early age of 34. Cibber, in his Lives of the Poets, ſays he periſhed unfortunately in a night-ramble in London ſtreets.—His Theodoſius and Alexander the Great are ſtock-plays, and to this day are often acted with great applauſe. The late Mr Barry was particularly fortunate in the character of the Macedonian Hero.

Lee-Penny, or *Lee-ſtone*, a curious piece of antiquity belonging to the family of Lee in Scotland, and of which the following account has been given in the Gentleman's Magazine for December 1787.

It is a ſtone of a dark red colour and triangular ſhape, and its ſize about half an inch each ſide. It is ſet in a piece of ſilver coin, which, though much defaced, by ſome letters ſtill remaining is ſuppoſed to be a ſhilling of Edward I. the croſs being very plain, as it is on his ſhillings.—It has been, by tradition, in the Lee family ſince the year 1320 odds; that is, a little after the death of King Robert Bruce, who having ordered his heart to be carried to the Holy Land, there to be buried, one of the noble family of Douglas was ſent with it, and it is ſaid got the Crowned Heart in his arms from that circumſtance: but the perſon who carried the heart was Simon Locard of Lee, who juſt about this time borrowed a large ſum of money from Sir William de Lendſay, prior of Air, for which he granted a bond of annuity of ten pounds of ſilver, during the life of the ſaid Sir William de Lendſay, out of his lands of Lee and Cartland. The original bond, dated 1323, and witneſſed by the principal nobility of the country, is ſtill remaining among the family papers.

As this was a great ſum in thoſe days, it is thought it was borrowed for that expedition; and, from his being the perſon who carried the royal heart, he changed his name to *Lockheart*, as it is ſometimes ſpelled, or Lockhart, and got a heart within a lock for part of his arms, with the motto *Corda ſerata pando*.—This Simon Lockhart having taken priſoner a Saracen prince or chief, his wife came to ranſom him; and on counting out the money or jewels, this ſtone fell out of her purſe, which ſhe haſtily ſnatched up; which Simon Lockhart obſerving, inſiſted to have it, elſe he would not give up his priſoner.—Upon this the lady gave it him, and told him its many virtues, *viz.* that it cured all diſeaſes in cattle, and the bite of a mad dog both in man and beaſt. It is uſed by dipping the ſtone in water, which is given to the diſeaſed cattle to drink; and the perſon who has been bit, and the wound or part infected, is waſhed with the water. There are no words uſed in the dipping of the ſtone, nor any money taken by the ſervants, without incurring the owner's diſpleaſure. Many are the cures ſaid to be performed by it, and people come from all parts of Scotland, and even as far up in England as Yorkſhire, to get the water in which the ſtone is dipped, to give their cattle when ill of the murrain eſpecially, and black-leg.—A great many years ago, a complaint was made to the eccleſiaſtical courts againſt the laird of Lee, then Sir James Lockhart, for uſing witchcraft.—It is ſaid, when the plague was laſt at Newcaſtle, the inhabitants ſent for the Lee-penny, and gave a bond for a large ſum in truſt for the loan; and that they thought it did ſo much good, that they offered to pay the money, and keep the Lee-penny; but the gentleman would not part with it. A copy of this bond is very well atteſted to have been among the family papers, but ſuppoſed to have been ſpoiled, along with many more valuable ones, about 50 years ago, by rain getting into the charter-room, during a long minority, and no family reſiding at Lee.

The moſt remarkable cure performed upon any perſon, was that of Lady Baird of Sauchtonhall, near Edinburgh; who having been bit by a mad dog, was come the length of a hydrophobia; upon which, having ſent to beg the Lee-penny might be ſent to her houſe, ſhe uſed it for ſome weeks, drinking and bathing in the water it was dipped in, and was quite recovered. This happened above 80 years ago; but it is very well atteſted, having been told by the lady of the then laird of Lee, and who died within theſe thirty years. She alſo told, that her huſband Mr Lockhart, and ſhe, were entertained at Sauchtonhall by Sir Robert Baird and his lady, for ſeveral days, in the moſt ſumptuous manner, on account of the lady's recovery, and in gratitude for the loan of the Lee-penny ſo long, as it was never allowed to be carried away from the houſe of Lee.

N. B. It was tried by a lapidary, and found to be a ſtone; but of what kind he could not tell.

LEECH, in zoology. See HIRUDO.

LEECHES in a ſhip, the borders or edges of a ſail which are either ſloping or perpendicular.

The leeches of all ſails whoſe tops and bottoms are parallel to the deck, or at right angles to the maſt, are denominated from the ſhip's ſide, and the ſail to which they belong; as the *ſtarboard*-leech of the mainſail, the *lee*-leech of the fore-top-ſail, &c. But the ſails which are fixed obliquely on the maſts have their leeches named from their ſituation with reſpect to the ſhip's length; as the *fore*-leech of the mizen, the *after*-leech of the jib or fore-ſtayſail, &c.

LEECH-Lines, certain ropes faſtened to the middle of the leeches of the main-ſail and fore-ſail, and communicating with blocks under the oppoſite ſides of the top, whence they paſs downwards to the deck, ſerving to truſs up thoſe ſails to the yard as occaſion requires. See BRAILS.

LEECH-Rope, a name given to that part of the bolt-rope to which the border or ſkirt of a ſail is ſewed. In all ſails whoſe oppoſite leeches are of the ſame length, it is terminated above the earing, and below the clue. See *BOLT-Rope*, CLUE, and EARING.

LEEDS, a town of the Weſt Riding of Yorkſhire, 196 miles from London, has a magnificent ſtone-bridge over the river Aire to the ſuburbs. It was incorporated by King Charles I. with a chief alderman, nine burgeſſes, and 20 aſſiſtants; and by Charles II. with a mayor, 12 aldermen, and 24 aſſiſtants. It has been a long time famous for the woollen manufacture, and is one of the largeſt and moſt flouriſhing towns in the county, yet had but one church till the reign of Charles I. By the late inland navigation, it has communication with the rivers Merſey, Dee, Ribble, Ouſe, Trent, Darwent, Severn, Humber, Thames, Avon, &c. which navigation, including its windings, extends above 500 miles in the counties of Lincoln, Nottingham, Lancaſter, Weſtmoreland, Cheſter, Stafford, Warwich, Leiſter, Oxford, Worceſter, &c. Here is a long ſtreet full of ſhops, and a hall for the ſale of cloth, built in 1758. The merchants of this place, York, and Hull, ſhip them off at the latter, for Holland, Hamburgh, and the north. After ringing of the market-bell at ſix or ſeven in the morning, the chapmen come and match their patterns, when they treat for the cloth with a whiſper, becauſe the colthiers ſtandings are ſo near each other; and perhaps 20,000 l. worth of cloth is ſold in an hour's time. At half an hour after eight the bell rings again, when the clothiers make room for the linen-drapers, hardware-men, ſhoemakers, fruiterers, &c. At the ſame time the ſhambles are well ſtored with all ſorts of fiſh and fleſh; and 500 horſe loads of apples have been counted here in a day. There is a magnificent hall, where they alſo ſell great quantities of white cloth; and here is a noble guildhall, with a fine marble ſtatue of Queen Anne, erected about the year 1714. Its river being navigable by boats, they ſend other goods, beſides their cloth, to Wakefield, York, and Hull, and furniſh York with coals. There is a houſe called *Red-hall*, bacauſe it was the firſt brick-building in the town. and K. Charles I. had an appartment in it, which is ever ſince called the *King's chamber*. There is another place called *Tower-hill*, on which there was once a tower; beſides which, there was a caſtle which King Stephen beſieged in his march to Scotland. Here was alſo a park, where are now incloſures. There is a workhouſe here of free-ſtone, where poor children are taught to mix-wool, and perform other eaſy branches of that manufacture, and a part of it has been uſed many years as an hoſpital for the reception of the aged poor. Here are three alms-houſes, and two charity-ſchools of blue-coat boys to the number of 100. In the ceiling of St Peter's, its only parochial church, the delivery of the law to Moſes is finely painted in freſco by Parmentier. It is a venerable free-ſtone pile built in the cathedral faſhion, and ſeems to have been the patch-work of ſeveral ages. The increaſe of building in Leeds in the year 1786, was nearly 400 houſes. There is a Preſbyterian meeting-houſe here, erected in 1691, called the *new chapel*, which is the ſtatelieſt, if not the oldeſt, of that denomination in the north of England; and in the town and its ſuburbs are ſeveral other meeting-houſes, as is always obſervable in towns of great trade and manufacture. It is noted for ſome medicinal ſprings; one of which, called *St Peter's*, is an extreme cold one, and has been very beneficial in rheumatiſms, rickets, &c. Here is an hoſpital for relief of the poor, who had been honeſt and induſtrious, endowed with 80 l. a-year, beſides 10 l. a-year for a maſter to read prayers and inſtruct them; alſo a free ſchool. Its markets are Tueſdays and Saturdays and the market-laws are more ſtrictly obſerved here than any where. It has two fairs in the year. Leeds, though a large town, ſends no members to parliament.

LEEK, in botany. See ALLIUM.

LEEK, a town of Staffordſhire in England, 155 miles from London. It lies among the barren moorlands, has a manufacture of buttons, a market on Wedneſday, and 7 fairs in the year. In the church-yard, at the ſouth-eaſt corner of the chancel, are the remains of a Daniſh croſs, now upright, and 10 feet high from the ground, beneath which are three ſteps. In Blue hills in the neighbourhood are coal-mines;

and a ſalt ſtream comes from thence, which tinges the ſtones and earth through which it runs with a ruſty colour, and, with the infuſion of galls, turns as black as ink. Here are rocks of a moſt ſurpriſing height, without any turf or mould upon them.

LEER, in glaſs-making, a ſort of third furnace, intended to anneal and cool by proper degrees the veſſels when made. This properly comprehends two parts, the tower and leer. The tower is that part which lies directly above the melting-furnace, with a partition between them of a foot thick, in the midſt whereof there is a round hole, placed exactly over the furnace, through which the flame and heat paſs into the tower: on the floor of this tower the veſſels are ſet to anneal. There are two openings by which the veſſels are put into this tower; and after ſtanding there ſome time they are put into iron pans, which by degrees are drawn out all along that part of this furnace, which is properly called the *leer;* which is five or ſix yards long, that the veſſels may cool by degrees. This leer is continued to its tower and arched all along, and is about four feet wide, and high within. The glaſſes are cool by that time they are come to the mouth of this, which enters into a room where the glaſſes are placed when taken out.

LEES, the groſſeſt and moſt ponderous parts of liquors, which, being ſeparated by fermentation, fall to the bottom. The word comes from the French *lie;* and that either from *limus* "mud," or from *Lyeus* one of the ſurnames of Bacchus; or, according to du Cange, from *lia,* a corrupt Latin word ſignifying the ſame.—The vinegar-makers make a great trade of the lees of wine dried and made into cakes, after having ſqueezed out the remains of the liquor in preſſes.

LEET, or COURT LEET *(leta viſus franci plegii)*, is a court of record, ordained for puniſhing offences againſt the crown; and is ſaid to be the moſt ancient court of England. It inquires of all offences under high treaſon; but thoſe who are to be puniſhed with loſs of life or member, are only inquirable and preſentable here, and to be certified over to the juſtices of aſſiſe, (Stat. 1 Edw. III.). And this court is called the view of frank pledge, becauſe the king is to be there certified by the view of the ſteward, how many people are within every leet, and have an account of their good manners and government; and every perſon of the age of 12 years, who hath remained there for a year and a day, may be ſworn to be faithful to the king, and the people are to be kept in peace, &c. A leet is incident to a hundred, as a court baron to a manor: for by grant of a hundred, a leet paſſeth; and a hundred cannot be without a leet.—The uſual method of puniſhment in the court-leet, is by fine and amercement; the former aſſeſſed by the ſteward, and the latter by the jury.

LEEUW (William de), an eminent engraver of the laſt century. He was a native of Flanders, and the diſciple of Soutman, whoſe manner of engraving, or rather etching, he imitated. His prints generally appear harſh at firſt ſight; but grow into favour upon examination, and ſeveral of them have great effect; particularly his Daniel in the lion's den, a large plate lengthwiſe, from Rubens. The firſt impreſſions of this plate are before the name of Dankertz was added, and are now extremely rare and dear.

LEEWARD Ship, a veſſel that falls much to leeward of her houſe, when ſailing cloſe-hauled, and conſequently loſes much ground.

To LEEWARD, towards that part of the horizon which lies under the lee, or whither the wind bloweth. Thus, "We ſaw a fleet *under the lee,*" and, "We ſaw a fleet *to leeward,*" are ſynonymous expreſſions.

LEG, in anatomy, the whole lower extremity from the acetabula of the oſſa innominata, commonly divided into three parts, viz. the thigh, the *leg* properly ſo called, and the foot. See ANATOMY, n° 60.

LEGACY, in Scots law, a donation by one perſon to another, to be paid by the giver's executor after his death. See LAW, n° clxxxi, 3.

LEGATE, a cardinal or biſhop, whom the pope ſends as his ambaſſador to ſovereign princes. See AMBASSADOR.

There are three kinds of legates, viz. legates *a latere,* legates *de latere,* and legates by office, or *legati nati:* of theſe the moſt conſiderable are the legates *a latere,* the next are the legates *de latere.* See the article LATERE.

Legates by office are thoſe who have not any particular legation given them; but who, by virtue of their dignity and rank in the church, become legates: ſuch are the archbiſhop of Rheims and Arles: but the authority of theſe legates is much inferior to that of the legates *a latĕre.*

The power of a legate is ſometimes given without the title. Some of the nuncios are inveſted with it. It was one of the eccleſiaſtical privileges of England from the Norman conqueſt, that no foreign legate ſhould be obtruded upon the Engliſh, unleſs the king ſhould deſire it upon ſome extraordinary emergency, as when a caſe was too difficult for the Engliſh prelates to determine.

The term *legate* comes from *legatus,* which Varro derives from *legere,* "to chooſe;" and others from *legare, delegare,* "to ſend, delegate."

Court of the LEGATE, was a court obtained by Cardinal Woolſey of Pope Leo X. in the ninth year of Henry VIII. wherein he, as legate of the pope, had power to prove wills, and diſpenſe with offences againſt the ſpiritual laws, &c. It was but of ſhort continuance.

LEGATEE, in Scots law, the perſon to whom a legacy is provided.

LEGATIO LIBERA, was a privilege frequently obtained of the ſtate, by ſenators of Rome, for going into any province or country, upon their own private buſineſs, in the quality of *legati* or envoys from the ſenate, that the dignity of this nominal office might ſecure them a good reception, and have an influence on the management of their concerns. The cities and towns through which they paſſed were obliged to defray their expences.—This was called *libera legatio,* becauſe they might lay aſide the office as ſoon as they pleaſed, and were not encumbered with any actual truſt.

LEGATUS, a military officer amongſt the Romans, who commanded as deputy of the commander in chief. The *legati,* at their firſt inſtitution, were not ſo much to command as to adviſe. They were generally choſen by the conſuls, with the approbation of the ſenate. As to the number of the *legati*, we have no certain information, though we may upon good grounds aſſign one to every legion. In the abſence of conſul or proconſul, they had the honour to uſe the *faſces*.

Under the emperors there were two ſorts of *legati*, *conſulares*, and *prætorii*. The firſt commanded whole armies, as the emperors lieutenant-generals; and the other had the command of particular legions.

The *legati* under the proconſuls in the provinces, ſerved for judging inferior cauſes, and management of ſmaller concerns, remitting things of great moment to the governor or preſident himſelf. This was the original office of the *legati*, as was hinted above; though, as we have ſeen, they were afterwards admitted to command in the army.

LEGEND, any idle or ridiculous ſtory told by the Romaniſts concerning their ſaints, and other perſons, in order to ſupport the credit of their religion.

The legend was originally a book uſed in the old Romiſh churches, containing the leſſons to be read at divine ſervice; hence the lives of the ſaints and martyrs came to be called *legends*, becauſe chapters were read out of them at matins, and at the refectories of religious houſes. Among theſe the golden legend, which is a collection of the lives of the ſaints, were received in the church with great applauſe, which it maintained for 200 years; though it is ſtill ſo full of ridiculous and romantic ſtories, that the Romaniſts themſelves are now aſhamed of it.

LEGEND is alſo uſed by authors to ſignify the words or letters engraven about the margins, &c. of coins. Thus the legend of a French crown is, SIT NOMEN DOMINI BENEDICTVM: that of a moidore, is IN HOC SIGNO VINCES: on thoſe of the laſt emperors of Conſtantinople, we find IESVS CHRISTVS BASILEVS BASILEON, IHS XPS NIKA IESVS CHRISTVS VINCIT.

LEGEND is alſo applied to the inſcription of medals, which ſerves to explain the figures of devices repreſented on them. In ſtrictneſs, the legend differs from the inſcription; this laſt properly ſignifying words placed on the reverſe of a medal, in lieu of figures.

It ſeems as if the ancients had intended their medals ſhould ſerve both as images and as emblems; the former for the common people, and the other for perſons of taſte and parts; the images to repreſent the faces of princes; emblems their virtues and great actions; ſo that the legend is to be looked on as the ſoul of the medal, and the figures as the body.

Every medal has properly two legends; that on the front and that on the reverſe. The firſt generally ſerves only to diſtinguiſh the perſon by his name, titles, offices, &c. the latter is intended to expreſs his noble and virtuous ſentiments, his good deeds, and the advantages the public has reaped by him. This, however, does not hold univerſally; for ſometimes we find the titles ſhared between both ſides, and ſometimes alſo the legend.

In the medals of cities and provinces, as the head is uſually the genius of the place, or at leaſt ſome deity adored there, the legend is the name of the city, province, or deity, or of both together; and the reverſe is ſome ſymbol of the city, &c. frequently without a legend, ſometimes with that of one of its magiſtrates.

Legends generally commemorate the virtues of princes, their honour and conſecrations, ſignal events, public monuments, deities, vows, privileges, &c. which are either in Latin or Greek, or a mixture of both, and are intended to eternize their names, and the benefits done by them to the empire.

LEGERDEMAIN,

Or Sleight of Hand.

A DENOMINATION given to certain deceptive performances, which either depend altogether on dexterity and addreſs or derive but a ſmall degree of aid from philoſophical principles. Of theſe we ſhall preſent our readers with a ſelection of the beſt that have been either explained in books or publicly exhibited.

Sect. I. *Performances with Cups and Balls.*

Preliminary explanation.

THE following method of exerciſing this ſimple and ingenious amuſement is that practiſed by one Mr Koop a German, whoſe performances are deſervedly preferred to thoſe of former artiſts. In this, however, as in all the other branches belonging to the art of ledergemain, it is not ſufficient that a perſon has the requiſite dexterity, or ſleight of hand; it is neceſſary alſo to take off the attention of the ſpectators by ſome entertaining diſcourſe; which not only prevents diſcovery, but adds greatly to the amuſement of the company; for which reaſon, ſuch diſcourſe is inſerted in this article.

To play his part properly, the performer on cups and balls ought to provide himſelf with a bag about 12 inches long, and from eight to ten inn depth. The inſide muſt be furniſhed with a number of pockets for holding the ſeveral articles neceſſary in the amuſement; and this bag the performer muſt hang before him.

The materials neceſſary for the performer are,

1. Three white poliſhed tin-cups, repreſented by A, B, and C (fig. 1.) in the ſhape of a truncated cone with a double ledge D, towards the baſe. This ledge, which is about half an inch in breadth, ſerves to raiſe the cups eaſily by, admitting alſo the hand to paſs a ſmall cork-ball (ſee fig. 5.) The upper part E of the cup ought to be hollowed in the form of a ſphere, ſufficient to contain the balls without their appearing above the upper edge of the cups.

Plate CCLXVII.

2. It is alſo neceſſary to have a ſmall rod, called *Jacob's ſtaff*; which is uſually made of ebony, and neatly tipt with ivory at both ends. This is frequently uſed for ſtriking on the cups; and being held in the hand where the balls are alſo kept, it gives the operator an

opportunity of keeping that hand generally ſhut, or of varying its poſition, in order to avoid being diſcovered. The balls are made of cork, blackened by ſlight burning on the outſide.

The dexterity in performing this operation conſiſts in artfully ſecreting a ball in the right hand, and making it to appear or diſappear in the ſame hand. The ſecreting it between the fingers is called *conjuring the ball*, at which time the ſpectators are to ſuppoſe that it is kept in the other hand, or that it was paſſed under a cup; but if it is made to reappear when held ſecretly in the hand, they muſt believe that it came out of the place laſt touched by the fingers.

Conjuring the ball is performed by putting it between the place of the thumb A and the finger B (fig. 2.), conveying it with the thumb, by rolling it upon the fingers the length of the line BC, moving the middle finger D to a diſtance, and placing the ball at the junction of the fingers C (fig. 3.); but in this part of the operation it is neceſſary to hold the ball rather tight, leſt it ſhould fall down and diſcover the ſecret. In order to make it appear, we muſt bring back the ball the ſame way from C to D; and every time that it is conjured, or made to diſappear, as well as when it is made to reappear, the palm of the hand ſhould be turned from the ſide of the table on which the operator is playing.

While this part of the trick is performing, the operator muſt let the ſpectators know that the ball has been paſſed under a cup, or into another hand; and in the firſt caſe he makes a motion with the hand (as repreſented fig. 4.) indicating that he had thrown it through the cup; at which time alſo he conjures it, approaching the two fingers of the right hand towards the left, which laſt he holds open, and makes a motion as if the ball had been placed there, ſhutting the left hand inſtantly. It is alſo to be ſuppoſed, at every time when a ball ſeems to be placed below a cup, that it has been held in the left hand; and when he raiſes the cup with the right hand as in fig. 5. the left hand muſt be opened, and he reſts the ball at that inſtant upon the hollow of the other, ſliding it along the fingers.

At the time the ball is to be put ſecretly under the cup, it ſhould lie between the two fingers of the right hand (fig. 5.) With this hand he raiſes the cup; and placing it on the table, lets go the ball, which, according to its poſition in fig. 6. ſhould be found near the edge of the cup when taken into the hand. If he would put the ball ſecretly between the two cups, it muſt be let go by jerking it towards the bottom of the cup which he holds; and places it very quickly on that in which the ball is to be found. When the ball is in this ſituation, if the operator ſhould want it to diſappear, he muſt raiſe the two cups with his right hand, and draw out haſtily that under which the ball is placed; at the ſame inſtant lowering with his left hand the other cup, under which he places it.

In ſpeaking of the tricks which follow, terms are made uſe of which explain whether what is ſaid be feigned or true; of which terms explanations are given, and numbers adapted to the explanations of the different operations which follow.

I. *To put the ball under the cup:* Really done, with the fingers of the right or left hand.

II. *To put the ball under the cup or in the hand.*—A feigned conjuration; pretending to ſhut it up in the left hand, which is afterwards opened, in order to have it ſuppoſed that the ball is under the cup or elſewhere. See fig. 3.

III. *To paſs the ball under the cup.*—The ball ſuppoſed to be conjured is to be really introduced.

IV. *To paſs the ball between the cups*, is likewiſe real.

V. *To make the ball which is between the cups diſappear.*—This is likewiſe real; and performed, as has already been deſcribed, by drawing back with much precipitation and dexterity the cup on which it is placed, and lowering upon the table that which is above, and under which the ball muſt of conſequence be found.

VI. *To take the ball.* Real.—It is taken between two fingers of the right-hand, and ſhown before conjuration.

VII. *To take away the ball from under the cub.* This is done by taking it away in the ſight of the ſpectators.

VIII. *To draw the ball.* Feigned; or by pretending to draw it from the end of the rod, from the cup, or any other place, by bringing into the fingers the ball which was ſecreted.

IX. *To throw the ball through the cup*, is to conjure it in pretending to throw it.

X. *To raiſe up the cups.* This is really done in three ways; viz. either with the right hand, the rod, or the left hand. The firſt is when the ball is to be ſecretly inſerted in returning the cup to its place. In the ſecond, the rod is to be put on the tops of the cups to turn them over again, ſo that the balls may be ſhown which were to be paſſed into them. The third is when the operator intends to ſhow that no balls are in the cups, or that there are ſome.

XI. *To cover a cup.* This is really done, by taking with the right hand that which is to be put over another, and introducing at the ſame time a ball between the two.

XII. *To recover a cup.* It is done by taking with the left hand the cup to be put over or above, without introducing any thing into it.

The PERFORMANCES.

Performances.

1 *To put a ball under each cup and take it out again.* Having placed on the table the three cups and little rod, as ſhown in fig. 1. the performer muſt begin his manœuvres, by endeavouring to amuſe the ſpectators with ſome kind of entertaining diſcourſe. Nothing can be more *a propos* than the origin of the little rod and cups; and he muſt be very aſſiduous in this ſort of diſcourſe to take off the eyes of the ſpectators as much as poſſible. The following may be a ſpecimen of the manner in which he ought to addreſs his audience: "There are many perſons who meddle with the play of the cups and balls, and yet know nothing about them. This is by no means extraordinary: even I who now play before you, pretend to know but little. Nay, ſome time ago, I was ſuch a novice as to think of playing before a numerous aſſembly with glaſs cups, in which you may gueſs I did not meet with great applauſe. I do not indeed practiſe this method but before ſuch as are actually blind; neither do I play with China cups, leſt, through aukwardneſs in feigning to break their handles, I ſhould do ſo in reality. Theſe are the cups which anſwer my purpoſes. They are made of ſuch metal as the alchemiſts attributed to

Jupiter and Mars, or, to ſpeak more properly and intelligibly, they are made of tin. Behold and examine theſe cups (*ſhowing the cups to the company, and putting them on the table:)* All my ſcience, and it is in that in which it is admirable, conſiſts in deceiving the eyes, and paſſing the balls into the cups without your perceiving how it is done. I adviſe you therefore to pay no attention to my words, but to examine well my hands, (*ſhowing his hands.*) If there is in this company any perſon who has the misfortune to uſe ſpectacles, he may retire; but the moſt clear-ſighted will ſee nothing there.

"Here is the little Jacob's rod (*ſhowing the rod with the left hand*); that is to ſay, the magazine from which I take all my balls (*taking ſecretly with the other hand a ball from his bag, which he hides between his fingers*). There is not one in England ſo well furniſhed. Obſerve, that the more I take from it the more remain: I draw from it (VIII.) this ball, (*ſhowing it and placing it upon the table,* (I.) Obſerve that there is nothing under the cups (*ſhowing the inſide of the cups*), and that I have no other ball in my hands, (*ſhowing his hands*). I take (VI.) this ball: I put it (II.) under this firſt cup. I draw (VIII.) a ſecond ball from my little rod, and I put it under this ſecond cup (*actually done*). It is proper here to tell you, that the generality of thoſe who play the cups only feign to put the balls there; but I do not deceive you and I actually put them there. (*He raiſes the cup* B, *and taking the ball which he has put under it in his right-hand fingers, ſhows it to the company*). I return it (II.) under the ſame cup. I take (VIII.) this third, and put it (II.) in the ſame way under this laſt cup. You are about to ſay that this is not very extraordinary, and that you could do it as well yourſelves. I agree with you; but the difficulty conſiſts in taking out theſe balls again through the cups, (*ſtriking the firſt cup with the rod*). I take (VIII.) this firſt ball (*ſhowing it*): I put it (II.) into my hand, and ſend it to Conſtantinople, (*he opens the left hand*). I take (VIII.) this, (*ſtriking with the rod on the ſecond cup*). I put it (II.) into my hand, and I ſend it to the Eaſt Indies, (*opening his left hand*). I take (VIII.) the laſt, and I put it (I.) on the table: Obſerve that there are no more under any of theſe cups, (*turning down the cups with the rod*).

2. *With the ſingle ball remaining on the table, to paſs a ball through each of the cups, and to take it off from the ſame.* "I return the cups to their places, and take (VI.) this ball, and I put it under this firſt cup. I take it back again (VIII.): obſerve that it is not there now, (*raiſing* (X.) *the cup with the left hand*). I put it (II.) under this other cup: I take it out again (VIII.) in the ſame manner, (*raiſing* (X.) *the cup*). I put it (II.) under the laſt cup, and take it out again, (VIII.) (*raiſing the laſt cup with the left hand, and placing the ball on the table*).

3. *With the ſingle ball remaining on the table, to take away a ball through two or three cups.*—In this performance the three cups are diſtinguiſhed by **A, B, C,** as in fig. 1.

"I never have any ball ſecreted in my hands, as the greateſt part of them who play the cups and balls have (*ſhowing his hands*). I take (VI.) this ball, and I put it (II.) under this cup B. cover it (XII.) with this cup C, and I take again (VIII.) this ball thro' the two cups (*ſhows the ball in placing it on the table, returns afterwards the cup* C *to its place, and raiſes* (X.) *the cup* B *to ſhow that there is nothing there*). I take again (VI.) this ſame ball. I put it (II.) under the ſame cup B: I cover it (XII.) with the two other cups C and A; and I take out (VIII.) this ball through the three cups (*ſhowing it and placing it on the table*).

4. *With the ſingle ball remaining on the table, to paſs the ſame ball from cup to cup.*—"I now beg of you to pay every poſſible attention, and you will very diſtinctly ſee this ball paſs from one cup into the other (*putting the cups at a greater diſtance from each other*). I take (VI.) this ball, and I put it (II.) under the cup C: there is nothing under this cup B (*raiſing it, introducing the ball, and taking the rod in his hand*). I command that which I have put under the cup C to paſs under that B. You ſee it (*moving the end of the rod from one cup to the other, as if he followed the ball*): obſerve that it is paſſed (*raiſing the cup with his left hand, and taking the ball with his right, ſhows it to the company*). I return it (II.) under this cup B; there is nothing under this A (*raiſing the cup with his right hand, and introducing the ball there*). I am going to paſs it under this laſt cup A. Look well; come near; (*making as if in ſeeing it he would ſhow with the end of the rod the path that it took*). You did not ſee it paſs? I am not much ſurpriſed: I did not ſee it myſelf; however, here it is under the cup (*raiſing the cup* A, *and placing it on the table*).

5. *With the ſame ball remaining on the table. The cups being covered, to paſs a ball from one into the other, without raiſing them up.*—"I was very right in telling you, that the moſt clear-ſighted would not ſee very much; but, for your comfort, here is a trick in which you will ſee nothing at all. I take this ball, and put it (II.) under this cup B. I cover it (XI.) with the two other cups (*taking one in each hand, and introducing the ball upon the cup* B): pay attention, that there is abſolutely nothing in my hands (*ſhowing them*). I command this ball to mount up upon the firſt cup (*taking up the two cups, and putting them in their places, he ſhows that it has mounted*). I return (II.) this ball under the ſame cup B. I cover it as before (*covers it in taking a cup in each hand, and introducing a ball between the ſecond and third cup*). I take (*the only ball with which he plays being under the third cup, he cannot ſhow it, but acts as if he had taken it out, and put it into the fingers of his left hand, which he holds in the air, in conducting the hand from one ſide to the other*). I take the ball, which is under theſe three cups; and I throw it thro' the firſt cup (*feigning to throw it*): obſerve that I have not conjured the ball, having nothing in my hands (*ſhowing them*); it is paſſed, however, (*raiſing the firſt cup with the left hand, putting the ball upon the table and the cups in their places.*)

6. *With the ſingle ball remaining on the table, to paſs a ball through the table and two cups.*—"You are undoubtedly ſurpriſed, that, having but a ſingle ball, I have been able, after having ſhown it to you, to paſs it under this cup without raiſing it; but let that not aſtoniſh you: I have ſecrets much more wonderful. I

convey, for example, the ſteeple of one village into another: I have ſympathetic quadrants, with which a converſation may be held at 200 leagues diſtance: I have a flying chariot which can conduct me to Rome in three days. I will ſhow all theſe curioſities as ſoon as my machines are entirely completed; that is to ſay, in a few centuries: but to amuſe you till the arrival of all theſe prodigies, I now continue the entertainment of the cups and balls. I put (II.) this ball under the cup A. I take it away again (VIII.) (*ſhowing it, and feigning to put it under his left-hand fingers*). I cover (XI.) this cup with the two others B and C (*introducing the ball between theſe two cups, uſing always the right hand, and feigning ſtill to hold it in his left*), and I paſs this ſame ball through the table and the two cups (*putting the left hand under the table.*) There it is paſſed (*raiſing the firſt cup.*)

7. *With the ſame ball. A ball having been put under a cup, to take it away again, and to paſs it between two others.*—" Here is again a very pretty trick: I take this ball, and I put it (II.) under this cup A. Obſerve, that there is nothing under the others (*ſhowing them and introducing the ball under the cup* C), nor in my hands: I take this ball, which is under the cup A (*feigning to take it out, and raiſing the bottom of the cup ſo that the ſpectators may not attend to his fingers*). I cover this cup C with the two others A and B, and I throw it (IX.) through theſe two cups (*raiſing them, and ſhowing that the ball is paſſed there*).

8. *With this ſingle ball and a ſhilling; to paſs a ball from one hand into the other*—" I take this ball; I put it (II.) into this hand, and I put into the other the ſhilling. In which hand do you think the ball is? or in which do you think the ſhilling may be? (*Whatever anſwer the ſpectator makes, the performer ſhows him that he is miſtaken, and that the whole is in the right hand; and this truth ſerves as a pretence to take a ball from the bag in putting the ſhilling back into it.*)

The performer may, however, without breaking the connection of theſe operations, diſpenſe with this trick, and feign to drop the ball he plays with, which affords him a pretence for taking another.

9. *With the ball remaining on the table, and that which is ſecretly taken out of the bag; to paſs under a cup the two balls put under the others.*—The operator goes on with his diſcourſe: "in order to give you ſtill farther amuſement, I take this ball and cut it in two (*taking it in his left hand, and holding the rod with his right; feigning to cut it, he puts afterwards the rod on the table, and brings back to his fingers ends the ball which he took out of the bag*). Nothing is ſo commodious as to be able in this manner to multiply the balls. When I am in want of money, I cut them again and again, until I may have had five or ſix buſhels (*placing the two balls on the table*). Obſerve that there is nothing under this cup A. I put there (II.) this firſt ball: there is nothing more under the two other cups (*introducing the ball under the cup* B). I take this ſecond ball, and I put it (II.) under the cup C: there is now a ball under theſe two cups A and C. I take away (VIII.) from this cup C this ball, and I throw it (IX.) through the middle cup B: obſerve that it is paſſed (*raiſing the cup* B, *and introducing there the ſecond ball*). I command this, which is under the other cup A, to paſs under the ſame cup B (*raiſing this cup, and ſhowing that they are both there, and placing them upon the table*).

10. *With the two balls which are upon the table. Two balls having been put under the ſame cup, to paſs them under the others.*—" When I was at college, the tutor told me it was neceſſary to know how to do my exerciſe in two ways. I have juſt now paſſed theſe two balls into the middle cup; I am now to make them go out; the one is not more difficult for me than the other. I take therefore theſe two balls, and place them under this cup B (*putting one ball under the cup, and conjuring the other*); obſerve that there is nothing under the cup A, nor under the other C (*introducing into this laſt the ball that he conjured*): I command one of theſe balls, which are under the middle cup, to paſs under the one or the other of theſe two cups A and C. Behold it already gone (*raiſing the cup* B *to ſhow that there is no more than a ſingle ball; and taking, with the right hand, the ball which is underneath, he ſhows it, and puts it* (II.) *under the ſame cup* B). Let us ſee into which cup it has paſſed (*raiſing immediately the cup* A, *and introducing the ball that he took from the cup* B): here it is under this cup C (*raiſing the cup;*) I command the other ball to paſs under this cup A (*he raiſes it, and ſhows that it paſſed there*)." This trick is frequently done with three balls, but it appears much more extraordinary with two.

11. *With theſe two balls, a third which he ſhows, and a fourth ſecreted in his hands; to paſs three balls under the ſame cup.*—" All this is but a trifle; I am going to ſhow you another trick with three balls (*taking out of the bag a third ball, and placing it on the table, ſecreting at the ſame time a fourth in his hand*). Obſerve that there is nothing under any of theſe cups (*raiſing them, and introducing them under the cup* C). I take this firſt ball, and throw it (IX.) through this cup C. Obſerve that it is paſſed (*raiſing* (X.) *the cup with the right hand*); I take this ſecond ball, and throw it (XI.) through the ſame cup. There it is paſſed (*raiſing* (X.) *again the cup*); I take the third, and I make it paſs the ſame (*raiſing* (X.) *the cup, and ſhowing that theſe are paſſed under all the three*).

12. *With the three balls remaining under the cup, and that held ſecretly in the hand; to paſs two balls from one cup into another, at the choice of a perſon, without touching any of the cups.*—" Here is another in which I have never been able to comprehend any thing; but it will aſtoniſh you much (*raiſing the cup* C, *and taking away the three balls from their places, he puts them under each cup, and in raiſing the cup* C *introduces there the fourth ball which he held ſecretly in his hand*). I take this ball (*that which is under the cup* B), and I put it (II.) under the ſame cup. I take this (*the ball from the cup* A), and I place it (I.) under the ſame cup (*putting there alſo that which was ſecreted in his hand*): I take this laſt, and I throw it (IX.) through the cup C; and to ſhow that I do not deceive you, behold it paſſed (*raiſing* (X.) *the cup that has been fixed upon, which ſuppoſe to be* C, *and ſhowing that there are two*). I take again theſe two balls, and put them under the cup C (*putting really but one*): obſerve that there is no more under this cup B (*introducing there the ball that he had juſt taken away, and ſhowing that he had no other in his hand*); I command one of theſe balls, which are under this cup C,

to go and join that which is under this A. Obſerve that it is paſſed. There! (*raiſing the cup* C, *and returning the two balls under the ſame cup, and raiſing* C, *in order to ſhow that there is but a ſingle one; and he places it again under the ſame cup: he does not raiſe the cup* B *under which a ball remains*).

13. *With the three balls that were placed upon cups, and that which remains hidden under the middle cup; to paſs under the ſame cup the balls put under the others.*—"I take this ball (*that which is upon the cup* C), and I put it (II.) under the ſame cup C; and I order it to paſs into this cup B: there it is paſſed (*in raiſing this cup he introduces a third ball*). I take this third ball, and put it (II.) under this cup C; and I command it to paſs into the cup B along the table, and in the ſight of the ſpectators (*taking the rod in his left hand, ſeigning to ſhow the way that it paſſed between the two cups*). Did you not ſee it then? Here it is (*He draws it* (VIII.) *from the end of the rod, which appears to ſhow it*). Go quickly (*throwing it* (IX.) *through the cup,* B; *and ſhowing that they are all three there, and that there is nothing under the two others; placing afterwards three of the balls on the table, and ſecreting the fourth in his hand*).

14. *With the three balls remaining upon the table, and that which is held ſecretly in his hand.—Multiplication of the balls.*

For this trick there muſt be a tin vaſe (ſee fig. 8.), at the bottom of which there muſt be contrived a falſe bottom A, which will fall down at pleaſure; that is to ſay, in reverſing it upon the table, by means of a ſmall trigger placed at the baſe of one of the handles B, introducing previouſly between the falſe and true bottoms a dozen of balls. The operator goes on with his diſcourſe.

"If any of the company believe in witches, I would give my advice that they ſhould believe in them no longer; as what I am about to do is much more ſurpriſing than the feats of any witch.—I put (I.) theſe three balls under the three cups you ſee on the table: I take away (VII.) this firſt ball (*that which is under the cup* C), and I put it (II.) into this vaſe. I take this, and I alſo put it (II.) into the vaſe. I take away (VII.) this third (*that which is under the cup* A), and I throw it (II.) the ſame way." (*Every time that he raiſes one of the cups to take away the ball, he introduces that which always remains ſecreted in his right hand; and this he repeats, conſtantly taking out one ball and putting in another, till he has introduced all the twelve balls; after which he reſumes his diſcourſe.*) "You imagine, perhaps, that I always make uſe of the ſame balls; but, to prove the contrary, here they are, (*inverting the vaſe ſo as to turn them all out*).

In this trick, if the vaſe be well made, the inſide may be ſhown, and it may even be previouſly inverted; in which caſe, it will not be ſuppoſed that any balls have been put into it.

15. *With the three balls remaining under each of the cups, and that which is hidden in his hand; to paſs one ball under each of the three cups.*

"I put all theſe balls into my pocket. I take (VI.) this (*the one ſecreted in his hand*), and I make it paſs through the table under this firſt cup C, (*conjuring it*). I take another from my bag (*ſhowing the ſame ball*). I make it paſs in the ſame manner through this B, (*conjures it again*). I take a third (*ſhowing ſtill the ſame*), and I make it paſs under this laſt cup A (*conjuring it*). Here are all the three paſſed (*turning over the cups, and in the taking them up again introduces the ball that he has in his hand under the cup* B, *and puts the three balls upon the three cups.*

16. *With the three balls put upon each cup, and that which was introduced under the middle cup; to draw two balls through the ſame cup.*—"There will be wanted now only two balls." Here the operator takes that which is under the cup C, and puts it (II.) into his bag. He takes in the fingers of his right hand the ball which is on the cup B, ſhowing it; and with the other covers the cup B, with that paſſing (IV.) there the ball which he feigned to put into his bag. He then takes the ball which is under the cup A with the right hand; and ſhowing a ball in each hand, tells the company that he put them (II.) under the cup A; though he actually puts but one, which he holds in his left. He then draws one of theſe balls through the ſame cup A, ſhowing it, and placing it upon the cup C. He then raiſes the cup A, and takes the ball which is under it with his right hand, adding, "There remains but one more." While pronouncing theſe words, he puts it (II.) under the cup. "I take (adds he) the other ball," (*raiſing the cup, and ſhowing that it is there no longer*); then, taking one of the two balls which ſeemed to remain alone, but put it (II.) into his bag, ſaying, "I return this into my bag."

17. *With a ball which is hidden under the middle cup, another hidden under that which covers it, that which remains in the hand, and a fourth which is upon the table; to paſs the ſame ball ſucceſſively through the three cups.*—The preceding trick was only on purpoſe to prepare the ſpectators for this; as they now imagine that the performer played only with one ball. He may now addreſs them in the following manner:

"I am now going to make a very pretty trick with this ſingle ball. I forgot to ſhow it to you at the beginning: I cover (XI.) theſe cups (*putting the cup* A *upon* C *and* B). I take (VI.) this ball, and I throw it (IX.) through the firſt cup;" (*raiſing* (X.) *the cup* A *with the right hand*). He then ſhows that it is paſſed between C and A; and, putting it in its place, he introduces there that which he has in his hand. "I take (ſays he) (VI.) this ſame ball, and I throw it through the other cup C;" and while he ſays ſo, he raiſes (X.) the cup C, ſhowing that it has paſſed, introducing there that which he has in his hand, and putting it in the place of the former. "I take again (continues he) (VI.) this ſame ball, and I throw it (IX.) through that laſt cup B," (*raiſing* (IX.) *the cup* B.) During which time he takes away the ball from under it with his left hand, then places it on the table, and returns the cup to its place, introducing there the ball which he has in his left hand.

18. *With the three balls which are under the cups, that which is on the table, and two which he takes from the bag; to paſs under a cup the balls put under the two others without raiſing theſe laſt.*—The performer may proceed in his diſcourſe in the following manner:

"Let us now return to the order of the entertainment which I have interrupted, and continue to play with three balls." He now takes two balls from his bag, by which means he in fact plays with ſix balls, though he pretends to play only with three. Theſe two balls, together with that which remains on the table, he puts on the top of each cup. “I take (ſays he) (VI.) this ball, *(that which is on the cup* C). I throw it (IX.) through that cup: there it is paſſed.” He now raiſes (X.) the cup, ſhows it; and thus has an opportunity of introducing the ball which he has in his hand. “I take (VI.) this (*the ball which is under the cup* B), and throw it (IX.) through the cup B.” At this he raiſes the cup with his left hand, ſhowing that it has paſſed, and covering it again. “I take again (VIII.) this ball from the ſame cup, and throw it (IX.) through that C: obſerve that it is paſſed.” Then raiſing up (X.) the cup C, ſhowing that there are then two there, he introduces other two which he had in his hand. “I take (ſays he (IV.) this ball *(that which is under the cup* A.), and I throw it (IX.) through the ſame cup A. There! it is paſſed,” *(raiſing the cup* C); after which he ſhows the three balls, and introduces there that which was in his hand, putting the three balls upon the table.

19. *With the three balls which remain under the cups, and the three others which remain upon the table; to paſs ſeparately the three balls through each cup.*—In this manœuvre the performer puts again the three balls which are upon the table upon the top of each cup. He takes that which is on the cup C, and throws it (IX.) through the ſame cup; and while he announces this to the company, he raiſes (X.) the cup: taking away (VIII.) the ball, ſhowing that it has paſſed, introducing there that which was in his hand, and putting the ſame ball upon the ſame cup. He then takes that which is upon the cup B, and throws it (IX.) through the ſame cup; ſhows that it is paſſed, takes it away (VII.) and introduces the ball that was in his hand under this cup, putting it in like manner on the cup. Then he takes the ball which is on the cup A, and throws it (IX.) through the ſame cup A. As he announces its paſſage he raiſes the cup, taking away (VII.) and ſhowing the ball; introducing in the ſame manner that which was in his hand; putting this firſt at the top of the cup A, and then ſhows that it is not in his hand, and that he has but three balls.

20. *With the three balls remaining upon the table, and thoſe which are under each cup. Having put the balls into the bag, to make them return under the cups.*—“I take theſe three balls, and I return them into my bag. *(keeping one in his hand.)* Behold to what all is reduced that I had to ſhow you for your amuſement. I did know ſome more very pretty tricks, but I have forgot them. *(Pretending to muſe for a moment)*: Ah! I ſtill remember two or three very pleaſing ones.—Come, my little balls! Return under the cups *(turning over the cups.)* See how nimble they are, and obedient at the ſame time;” *(covering them again with the cups.)*

21. *With the three balls which are under the cups, and that in his hand; to paſs the ball through the two cups.*—Here the operator begins with taking away (VII.) the ball which is under the cup C; he covers it with the cup B; and paſſes (III.) the other ball which he has in his right hand between the two cups. He then takes (VI.) the ball which he had in his left hand, and throws it (IX.) between the two cups B and C. In announcing its paſſage he raiſes the cup (X.), ſhows that it is paſſed, and introduces the ball in his hand. He then takes the ball under the cup B, and throws it (IX.) through the two cups C and B. Announcing to the company its paſſage, he raiſes (X.) the cup, and ſhows that there are two balls, introducing (III.) at the ſame time the third. He then takes the laſt ball, viz. that which is under the cup A, covers again with the left hand the two cups B and C, and throws (IX.) the third ball through theſe two cups. He then announces their paſſage, raiſes the two cups, and ſhows the three balls, covering again the cup C with the two others.

22. *With the three balls which are upon the cup C, and the one in his hand; to take out the three through two cups.*—“I take (ſays the performer) (VIII.) the firſt ball, and put it (II.(into my bag. I take (VIII.) in the ſame manner the ſecond, and I put it alſo into my bag. I take (VIII.) the third, and I put it into my bag. *(putting in really that which he had in his hand.)* While he deſires the ſpectators to obſerve that there are no more in the cups, he raiſes the cup A with the left hand, and, putting it in its place, raiſes with the right hand the cup C. In ſupporting it with the cup B, he puts it down quickly, and a little on the ſide of B, and at the ſame time places C on the table, under which will be found the three balls which had not time to ſeparate.

23. *With the three balls remaining under the middle cup, and three others taken out of the bag; to paſs in one action, three balls through a cup.*—This trick is begun by the performer taking three balls from his bag, and putting them on the top of the cup B, which he covers with the cup A. Ordering them to diſappear and to paſs under the cup C, he takes away very ſuddenly with the left hand the cup B, as is done in the preceding trick, leaving in the middle of the play the cup C, under which the balls are found. Taking them then away, and replacing them on the ſame cup, he makes them return again in the ſame manner under the cup C. At laſt he takes the three balls, and putting them in his bag, pretends to paſs them through the table under the cup where the others were. He then returns two or three of theſe laſt balls into his bag, and takes two white balls, which he puts upon the table.

24. *With the black ball remaining on the table, two other white balls, and a black one which he holds ſecretly in his hand; to paſs three balls from one cup into another.*

N. B. To make the ball white, they are rubbed with a litle chalk inſtead of being blackened with the candle.

“Let us now (ſays the operator) have a trick to prove that I do not conjure the balls. There is nothing under this cup C, *(introducing the black ball that was in his hand.)* There is no great thing under this B. I place there theſe three balls, *(the three which are upon the table, of which he conjures the white one.)* There is nothing more under this third cup A, *(introducing there the white ball)*. I order one of theſe two white balls which are under the cup B, to paſs under this A.” With theſe words he raiſes the cup B; and taking the white ball in the fingers of his left hand, and the black one in thoſe of the right, he ſhows them, ſaying, " Obſerve that there is but one white one. I put again theſe two balls under the cup B."—While ſpeaking thus he puts the white one under the cup, and conjures the other, while feigning to put it in with that of the left hand. He then announces its paſſage; and while he does ſo, raiſes the cup A, and introduces the black ball. Commanding then the black ball to paſs under the cup A, he raiſes the cup B, takes in his right-hand fingers the ball which is there, and ſhows it. " I put it again (ſays he) (II.) under this cup *(conjuring it)*; and I ſhow you that it is paſſed under this A, *(introducing there the white ball.)* I order at laſt the white ball, which is under this cup B, to paſs into this A." While telling the company that it is paſſed, he raiſes the cup A, and puts the three balls upon each cup, the black one upon the middle.

25. *With the three balls put at the top of the cups, and that which has been inſerted under one of them in the preceding trick; to change the colour of the balls.* The operator goes on with his diſcourſe: " If there is any one here who knows how to play the cups and balls, he will do well to obſerve, that it is not poſſible to do this trick by the common method, and with three balls only. However, I have no more, *(ſhowing his hands)*. I take this white ball *(that which is upon the cup* C), and I throw it (IX.) through this cup *(the ſame under which he left a black ball in the preceding trick)*. I take this black ball *(with the left-hand fingers)*; there is nothing under this cup B, *(introducing there the white ball)*. I throw it (IX.) through this cup B *(taking again the ball in his right-hand fingers)*. I take this other white ball, *(with his left-had fingers)*. There is nothing under this cup A, *(introducing the black ball)*: I throw it (IX.) through the cup A, *(taking it again into his right hand fingers to conjure it)*. Obſerve that they have all changed their colour," *(covering each of them with their cup)*.

26. *With the three balls which are left under the cups, two white balls, and a black one that he took trick by trick from his bag; to change the ſizes of the balls.*—In performing this trick the operator takes away the white ball which is under the cup C with his left hand fingers, and, raiſing the cup with his right, introduces there a white ball which he took out of his bag. The white ball which he introduces is kept in his hand with the fourth and little finger; and he raiſes the cup in the ſame manner as when he introduces the balls. In turning over the cup afterwards, he advances his hand to introduce this ball. Theſe balls ſhould be filled with horſe-hair or paper, ſo that they may be very light, and make no noiſe. The operator then tells his company, that he makes the ball paſs through the table under the ſame cup; and while he ſpeaks thus, he takes the ball again in his right hand, and while putting his hand under the table, he takes a black ball out of the bag. He then takes away the ball from the cup B, introducing the black one in its ſtead.—He then tells the ſpectators, that he makes it repaſs through the table; and while he tells them ſo, he takes a white ball; then, while taking away that which is under the cup A, he introduces that ball making it repaſs in the ſame manner through the table, and at laſt ſhows them to the company, and covers them with their cups.

27. *With the three balls which are under the cups, two other black balls, and a white one that was taken trick by trick from his bag; to paſs the ball from one cup into another.*—" Obſerve well (ſays the operator), that there are two white balls under theſe two cups A and C, and a black one under this *(raiſing the cups)*. I cover again theſe three balls *(covering each of them with a cup)*. I make to paſs out through the table the white ball which is under the cup C." Here he takes a white ball from his bag; and in order not to fail, the black and white balls ſhould be in ſeparate pockets. Having taken out the ball, he puts the firſt into his bag, telling the company that there is now nothing under the cup C; and while he ſays ſo, he raiſes it, holding the ball with his little finger, proceeding in his diſcourſe as follows. " I take away this ball *(that which is under the cup* A), and I paſs it through the table under the cup C *(taking a black ball from his bag.")* While the paſſage of his ball is announced, he raiſes the cup C to take it away and ſhow it; and introducing there this black ball, " I put again (ſays he) this other white ball into my bag, and I command the black one which is under the cup B to paſs under this. It is no longer under this cup;" and while he ſays ſo, he raiſes the cup B, in ſupporting with his little finger the ball which remains there. Announcing its paſſage, he raiſes the cup C and ſhows the ball; taking it afterwards into the left hand, throws it into the air, returning it into his right hand, and feigning to throw it into the air a ſecond time, he lets it fall into his bag; caſting his eyes upwards and downwards as if he ſaw it fall upon the cup B; he raiſes this cup, and ſhows it to the ſpectators, as the former, paſſed through the cup.

SECT. II. *Performances with the Cards.*

PREVIOUS to the performances with cards, it will be neceſſary to explain the method of making the paſs; that is bringing a certain number of cards from the bottom of the pack to the top; as many of theſe performances depend on that manœuvre.

Of making the paſs.

1. Hold the pack of cards in your right hand, ſo that the palm of your hand may be under the cards: place the thumb of that hand on one ſide of the pack, the firſt, ſecond, and third fingers on the other ſide, and your little finger between thoſe cards that are to be brought to the top and the reſt of the pack. Then place your left hand over the cards. in ſuch a manner that the thumb may be at C (fig. 20, 21.), the fore-finger at A, and the other fingers at B.

Plate CCLXVI.

The hands and the two parts of the cards being thus diſpoſed, you draw off the lower cards confined by the little finger and the other parts of the right hand, and place them, with an imperceptible motion, on the top of the pack.

It is quite neceſſary, before you attempt any of the experiments that depend on making the paſs, that you can perform it ſo dexterouſly that the eye cannot diſtinguiſh the motion of your hand; otherwiſe inſtead of deceiving others, you will expoſe yourſelf. It is alſo proper that the cards make no noiſe, as that will occaſion ſuſpicion. This dexterity is not to be attained without ſome practice.

There is a method of preparing a pack of cards, by inſerting one or more that are a ſmall matter longer or wider than the reſt; which preparation will be neceſſary in ſeveral of the following experiments.

The card of divination.

2. Have a pack in which there is a long card; open the pack at that part where the long card is, and preſent the pack to a perſon in ſuch a manner that he will naturally draw that card. He is then to put it into any part of the pack and ſhuffle the cards. You take the pack, and offer the ſame card in like manner to a ſecond or third perſon; obſerving, however, that they do not ſtand near enough to ſee the card each other draws. You then draw ſeveral cards yourſelf, among which is the long card, and aſk each of the parties if his card be among thoſe cards, and he will naturally ſay Yes, as they have all drawn the ſame card. You then ſhuffle all the cards together, and cutting them at the long card, you hold it before the firſt perſon ſo that the others may not ſee it, and tell him that is his card. You then put it again into the pack, and ſhuffling them a ſecond time, you cut again at the ſame card, and hold in like manner to the ſecond perſon, and ſo of the reſt (A).

If the firſt perſon ſhould not draw the long card, each of the parties muſt draw different cards; when, cutting the pack at the long card, you put thoſe they have drawn over it, and ſeeming to ſhuffle the cards indiſcriminately you cut them again at the long card, and ſhow one of them his card. You then ſhuffle and cut again in the ſame manner, and ſhow another perſon his card, and ſo on: remembering, that the card drawn by the laſt perſon is the firſt next the long card; and ſo of the others.

This experiment may be performed without the long card, in the following manner. Let a perſon draw any card whatever, and replace it in the pack: you then make the paſs, and bring that card to the top of the pack, and ſhuffle them without loſing ſight of that card. You then offer that card to a ſecond perſon, that he may draw it, and put it in the middle of the pack. You make the paſs and ſhuffle the cards a ſecond time in the ſame manner, and offer the card to a third perſon, and ſo again to a fourth or fifth, as is more fully explained further on.

The four confederated cards.

3. You let a perſon draw any four cards from the pack, and tell him to think on one of them. When he returns you the four cards, you dexterouſly place two of them under the pack, and two on the top. Under thoſe at the bottom you place four cards of any ſort; and then, taking eight or ten from the bottom cards, you ſpread them on the table, and aſk the perſon if the card he fixed upon be among them. If he ſay No, you are ſure it is one of the two cards on the top. You then paſs thoſe two cards to the bottom, and drawing off the loweſt of them, you aſk him if that is not his card. If he again ſay No, you take that card up, and bid him draw his card from the bottom of the pack.

If the perſon ſay his card is among thoſe you firſt drew from the bottom, you muſt dexterouſly take up the four cards that you put under them, and placing thoſe on the top, let the other two be the bottom cards of the pack, which you are to draw in the manner before deſcribed.

Divination by the ſword.

4. After a card has been drawn, you place it under the long card, and by ſhuffling them dexterouſly you bring it to the top of the pack. Then lay, or throw, the pack on the ground, obſerving where the top card lies. A handkerchief is then bound over your eyes, in ſuch a manner however, that you can ſee the ground, which may be eaſily done. A ſword is then put into your hand, with which you touch ſeveral of the cards, ſeemingly in great doubt, but never loſing ſight of the top card, in which, at laſt, you fix the point of the ſword, and preſent it to him that drew it. Two or three cards may be diſcovered in the ſame manner, that is, by placing them under the long card, and then bringing to the top of the pack.

The tranſmutable cards.

5. You muſt have in the pack two cards of the ſame ſort, ſuppoſe the king of ſpades. One of theſe is to be placed next the bottom card, which may be the ſeven of hearts, or any other card. The other is to be placed at top. You then ſhuffle the cards, without diſplacing thoſe three cards, and ſhow a perſon that the bottom card is the ſeven of hearts. Then drawing that card privately aſide with your finger, which you have wetted for that purpoſe, you take the king of ſpades from the bottom, which the perſon ſuppoſes to be the ſeven of hearts, and laying it on the table, telling him to cover it with his hand. You then ſhuffle the cards again without diſplacing the firſt and laſt card, and paſſing the other king of ſpades at the top to the bottom, you ſhow it to another perſon. You then draw that privately away; and taking the bottom card, which will then be the ſeven of hearts, you lay that on the table, and tell the ſecond perſon, who believes it to be the king of ſpades, to cover it with his hand.

You then command the ſeven of hearts, which is ſuppoſed to be under the hand of the firſt perſon, to change into the king of ſpades; and the king of ſpades, which is ſuppoſed to be under the hand of the ſecond perſon, to change into the ſeven of hearts; and when the two parties take their hands off, and turn up the cards, they will ſee, to their no ſmall aſtoniſhment, after having ſo carefully obſerved the bottom cards, that your commands are punctually obeyed.

The incomprehenſible tranſpoſition.

6. Take a card, the ſame as your long card, and rolling it up very cloſe, put it in an egg, by making a hole as ſmall as poſſible, and which you are to fill up carefully with white wax. You then offer the long card to be drawn; and when it is replaced in the pack you ſhuffle the cards ſeveral times, giving the egg to the perſon who drew the card, and, while he is breaking it, you privately withdraw the long card, that it may appear, upon examining the cards, to have gone from the pack into the egg. This experiment may be rendered more ſurpriſing by having ſeveral eggs, in each of which may be placed a card of the ſame ſort, and then giving the perſon the liberty to chooſe which egg he thinks fit.

(A) There is frequently exhibited another experiment, ſimilar to this, which is by making a perſon draw the long card; then giving him the pack, you tell him to place his card where he pleaſes and ſhuffle them, and you will then name his card or cut the pack where it is. You may alſo tell him to put the pack in his pocket, and you will draw the card; which you may eaſily do by the touch.

This deception may be ſtill further diverſified, by having, as moſt public performers have, a conſederate, who is previouſly to know the egg in which the card is placed; for you may then break the other eggs, and ſhow that the only one that contains a card is that in which you direct it to be.

To name ſeveral cards that two perſons have drawn

7. DIVIDE a piquet pack of cards into two parts by a long card. Let the firſt card contain a quint to a king in clubs and ſpades, the four eights, the ten of diamonds, and ten of hearts; and let the other part contain the two quart majors in hearts and diamonds, the four ſevens, and the four nines (B).

Then ſhuffle the cards, but obſerve not to diſplace any of thoſe cards of the laſt part which are under the long card. You then cut at that card, and leave the pack in two parts. Next, preſent the firſt of thoſe parts to a perſon, and tell him to draw two or three cards, and place the remainder on the table. You preſent the ſecond parcel in like manner to another. Then having dexterouſly placed the cards drawn by the firſt perſon in the ſecond parcel, and thoſe drawn by the ſecond perſon in the firſt parcel, you ſhuffle the cards, obſerving to diſplace none but the upper cards. Then ſpreading the cards on the table, you name thoſe that each perſon drew; which you will very eaſily do, by obſerving the cards that are changed in each parcel.

The two convertable aces.

8. ON the ace of ſpades fix, with ſoap, a heart, and on the ace of hearts, a ſpade, in ſuch a manner that they will eaſily ſlip off.

Show theſe two aces to the company; then taking the ace of ſpades, you deſire a perſon to put his foot upon it, and as you place it on the ground, draw away the ſpade. In like manner you place the ſeeming ace of hearts under the foot of another perſon. You then command the two cards to change their places; and that they obey your command, the two perſons, on taking up their cards, will have occular demonſtration. A deception ſimilar to this is ſometimes practiſed with one card, ſuppoſe the ace of ſpades, over which a heart is placed ſlightly. After ſhowing a perſon the card, you let him hold one end of it, and you hold the other, and while you amuſe him with diſcourſe, you ſlide off the heart. Then laying the card on the table, you bid him cover it with his hand. You then knock under the table and command the heart to turn into the ace of ſpades. By deceptions like theſe, people of little experience and much conceit are frequently deprived of their money, and rendered ridiculous.

The fifteen thouſand livres.

9. YOU muſt be prepared with two cards, like thoſe repreſented by fig. 22. and with a common ace and a five of diamonds.

The five of diamonds and the two prepared cards are to be diſpoſed as in fig. 23. and holding them in your hand, you ſay, "A certain Frenchman left 15,000 livres, which are repreſented by theſe three cards, to his three ſons. The two youngeſt agreed to leave their 5000, each of them, in the hands of the elder, that he might improve it." While you are telling this ſtory, you lay the 5 on the table, and put the ace in its place, and at the ſame time artfully change the poſition of the other two cards, that the three cards may appear as in fig. 24. You then reſume your diſcourſe. "The eldeſt brother, inſtead of improving the money, loſt it all by gaming, except 3000 livres, as you here ſee." You then lay the ace on the table, and taking up the 5, continue your ſtory: "The eldeſt, ſorry for having loſt the money, went to the Eaſt Indies with theſe 3000, and brought back 15,000." You then ſhow the cards in the ſame poſition as at firſt, in fig. 23.

To render this deception agreeable, it muſt be performed with dexterity, and ſhould not be repeated, but the cards immediately put in the pocket; and you ſhould have five common cards in your pocket, ready to ſhow, if any one ſhould deſire to ſee them.

To tell the number of cards by their weight.

10. TAKE a parcel of cards, ſuppoſe 40, among which inſert two long cards: let the firſt be, for example the 15th, and the other the 26th, from the top. Seem to ſhuffle the cards, and then cutting them at the firſt long card, poiſe thoſe you have cut off in your hand, and ſay, "there ſhould be here 15 cards." Cut them again at the ſecond long card, and ſay, There are here only eleven cards." Then poiſing the remainder, you ſay, "here are 14 cards."

To name ſeveral cards on which different perſons have fixed.

11. *Several different cards being ſhown to different perſons, that each of them may fix on one of theſe cards; to name that on which each perſon has fixed.* There muſt be as many different cards ſhown to each perſon as there are perſons to chooſe: therefore, ſuppoſe there are three perſons, then to each of them you muſt ſhow three cards; and telling the firſt perſon to retain one in his memory, you lay thoſe three cards down, and ſhow three others to the ſecond perſon, and ſo to the third. You then take up the firſt perſon's cards, and lay them down one by one, ſeparately, with their faces upward. You next place the ſecond perſon's card over the firſt, and in like manner the third perſon's card over the ſecond's; ſo that in each parcel there will be one card belonging to each perſon. You then aſk each of them in which parcel his card is; and when you know that, you immediately know which card it is; for the firſt perſon's card will always be the firſt, the ſecond perſon's the ſecond, and the third perſon's the third in that parcel where they each ſay his card is.

This experiment may be performed with a ſingle perſon, by letting him fix on three, four, or more cards. In this caſe you muſt ſhow him as many parcels as he is to chooſe cards, and every parcel muſt conſiſt of that number, out of which he muſt fix on one; and you then proceed as before, he telling you the parcel that contains each of his cards.

The magic ring.

12. MAKE a ring large enough to go on the ſecond or third finger (fig. 15.) in which let there be ſet a large tranſparent ſtone, to the bottom of which muſt be fixed a ſmall piece of black ſilk, that may be either drawn aſide or expanded by turning the ſtone round. Under the ſilk is to be the figure of a ſmall card.

Then make a perſon draw the ſame ſort of card as that at the bottom of the ring, and tell him to burn it in the candle. Having firſt ſhown him the ring, you take

---

(B) The cards may be divided in any other manner that is eaſy to be remembered.

take part of the burnt card, and reducing it to powder, you rub the ſtone with it, and at the ſame time turn it artfully about, ſo that the ſmall card at bottom may come in view.

The magic tea-caddy.

Plate CCLXVII

13. *To change one card into another.*—Provide a mahogany tea caddy about four or five inches deep, and long enough to admit a common ſized playing card: (ſee fig. 9.). This caddy muſt be furniſhed with a moving falſe bottom B, moveable upon hinges on the inſide edge of the front A. This bottom may be made of braſs, tin, or lead; and the falſe bottom muſt be ſo exactly fitted, that it cannot, from a ſlight view, be diſtinguiſhed from the other. The inſide of both caddy and falſe bottom ought to be lined with black or other dark-coloured cloth or velvet, ſo that it may not make any noiſe in falling down. It would be proper that the falſe bottom ſhould riſe with a ſpring towards the front, and it muſt be kept tight with a braſs ſpring-catch (*a*. fig. 10.) ſcrewed to the left ſide of the box near the top, and which is hid by the cloth covering. The end of this ſpring projects a little into the front. It is driven back, to let go the falſe bottom, by means of a ſmall bent wire *bb* let into the front of the caddy; and this pin is moved by the bolt *c*, which, when the box is locked, ſhoots out againſt it, by reaſon of the ſpring being driven in: by which means the bottom ſprings down, and covers the card placed in the box.

Before you attempt to ſhow any trick with this caddy, a card muſt be placed in the inſide between the front A and the falſe bottom B, ſpringing up the bottom afterwards againſt the front; after which it is ready for uſe, and ſhown openly to the company without any danger of a diſcovery.

Two perſons may now be deſired to draw two different cards from a pack, one of which muſt be the ſame with the one concealed in the caddy. Taking this card from the perſon who drew it, you put it in the pack, pretend to ſhuffle it, but keep the card either uppermoſt or undermoſt, ſo that you can eaſily find it afterwards. Deſiring then the other perſon to come forward and put his card very attentively into the caddy, you in the mean time ſecretly convey away from the pack the card drawn by the other; then, giving him the key, you deſire the caddy to be locked up. After ſome pretended conjurations, deſire him to unlock it again and take out the card; which he will find not to be his, but that drawn by his neighbour: his card being apparently vaniſhed from the caddy, as the other is from the pack.

The two magic port-folios.

14. PROVIDE two pieces of paſteboard A and B (fig. 11.) of equal dimenſions 3½ inches long and three broad. Place theſe beſide one another, as ſhown in the figure. Take then a very ſmooth ſilk ribbon, and put a band of it from C to E towards the edge of the paſteboard A, and another from D to F in ſuch a manner as to come beyond the paſteboard, and to admit of being folded over at the two ends. This muſt be glued on the back of the board A at the places C and D, and at the back of the board B at the places E and F. Place two other bands in a ſimilar manner on the paſteboard B, turning them over on the back of the ſame board at the places I and L, and at the back of A at the places G and H. Theſe two bands ſhould fall in the inſide of the paſteboard, according to the breadth of the ribbons. The two paſteboards being now placed the one upon the other, will form a kind of port-folio, one of the ſides of which will always be hinged when the other is opened. Four ſmall bands of the ſame ribbon are to be put at the four extremities of the ſides MNQR of the two pieces of paſteboard; obſerving that they paſs below the bands already placed. Glue their ends in the ſame manner as their ends at the back of the boards, ornamenting alſo the two ſides O and P of the paſteboard B with pieces of the ſame ribbon; but theſe ſix laſt bands are of no uſe in the performance.

Two pieces of paper folded like the cover of a letter muſt now be provided, large enough to cover the two ribbons GI and HL, as well as the ſpace contained within them. Glue one of theſe upon the two ribbons, and apply the other below this; ſo that the uppermoſt of theſe two wrappers may fall exactly over the other, incloſing and hiding the two ribbons entirely. A ſecond port-folio ſimilarly conſtructed is now to be provided, and both of them covered with coloured paper from the ſides where the ribbons are glued and folded.—The deceptions with theſe port-folios are as follows.

1. *Two cards, choſen at random, having been ſhut up in two ſeparate places, to make them paſs reciprocally from one into the other.*—The port-folios being conſtructed in the manner above deſcribed; if you open one of them either on the one ſide or on the other, one of the paper wrappers will always be viſible; and thus it will naturally be ſuppoſed that there is no more but one. Having then ſecretly incloſed a card in each of the wrappers of the port-folios, procure a pack of cards that has but two ſorts, and cauſe two perſons fairly draw two cards ſimilar to the firſt. Preſent then a port-folio, open, to the firſt perſon who drew a card ſimilar to that which was placed in the ſecond, deſiring him to place it in the wrapper which he finds vacant. Take back then the port-folio; and, in placing it on the table, artfully turn it over: having placed likewiſe in the vacant wrapper of the ſecond port-folio the card drawn by the ſecond perſon; and putting it in the ſame way upon the table, command the cards reciprocally to paſs from the one port-folio into the other; and open them ſo that each of the perſons may take out the card which the other inſerted.

1. *A card being ſhut up in the port-folio; to make it return into the pack.*—To perform this, procure a pack which has two cards of the ſame kind. One of theſe is to be openly drawn, and the perſon who has done ſo muſt be told to ſhut it up under the wrapper of one of the port-folios; and inform him that you will make it return into the pack. Give him the port-folio to blow upon; and on opening it, preſent him with the empty wrapper, to ſhow him that his card is not there; after which, preſenting him with the pack, he will find there the other card, which he will naturally imagine to be the one he put into the wrapper.

3. *To make an anſwer appear to a queſtion ſecretly written.* Tranſcribe on different cards a certain number of queſtions, and on others the ſame queſtions with their anſwers; taking care to have the hand-writing as much alike as poſſible, ſo that no difference can eaſily be perceived. The ſame caution muſt be obſerved with regard to the cards themſelves; which, for that reaſon,

ought to be plain ones. Having written with a pencil at the botton of the firſt queſtions their correſponding anſwers, ſhut up one of them ſecretly in the port-folio; and preſenting them to any perſon, let him draw as by chance that which is ſimilar to the one thus ſhut up. Make him then place in the other wrapper the queſtion which he had drawn, and telling him that you are about to write an anſwer even through the port-folio, take a glaſs, and pretend to read in it the anſwer to the queſtion. Open it afterwards, ſo that he may take out the other card himſelf, and he will imagine it to be the one he ſelected.

In performing this trick, it will be proper to have a port-folio of the ſame kind with the two deſcribed, which opens only at one ſide, and which conſequently has but one wrapper. This muſt be ſhown to ſuch as ſeem to be too inquiſitive, and will be of uſe to prevent them from entertaining any idea that the folio opens upon both ſides. The former muſt therefore be immediately put in the pocket, in order to give an opportunity of drawing out the other in caſe the port-folio ſhould be aſked for.

The card in the mirror. Plate CCLXVI.

15. **Provide** a mirror, either round, as A (fig. 8.) or oval, the frame of which muſt be at leaſt as wide as a card. The glaſs in the middle muſt be made to move in the two grooves CD and EF, and ſo much of the quickſilver muſt be ſcraped off as is equal to the ſize of a common card. You will obſerve that the glaſs muſt likewiſe be wider than the diſtance between the frame by at leaſt the width of a card.

Then paſte over the part where the quickſilver is rubbed off a piece of paſteboard, on which is a card that muſt exactly fit the ſpace, which muſt at firſt be placed behind the frame.

This mirror muſt be placed againſt a partition, through which is to go two ſtrings, by which an aſſiſtant in the adjoining room can eaſily move the glaſs in the grooves, and conſequently make the card appear or diſappear at pleaſure (c.)

Matters being thus prepared, you contrive to make a perſon draw the ſame ſort of card with that fixed to the mirror, and place it in the middle of the pack: you then make the paſs, and bring it to the bottom; you then direct the perſon to look for his card in the mirror, when the confederate behind the partition is to draw it ſlowly forward, and it will appear as if placed between the glaſs and the quickſilver. While the glaſs is drawing forward, you ſlide off the card from the bottom of the pack, and convey it away.

The card fixed to the mirror may eaſily be changed each time the experiment is performed. This experiment may alſo be made with a print that has a glaſs before it and a frame of ſufficient width, by making a ſlit in the frame through which the card is to paſs; but the effect will not be ſo ſtriking as in the mirror.

The marvellous vaſe.

16. **Place** a vaſe of wood or paſteboard AB (fig. 19.) on a bracket L, fixed to the partition M. Let the inſide of this vaſe be divided into five parts, *c, d, e, f, g:* and let the diviſions *c* and *d* be wide enough to admit a pack of cards, and thoſe of *e, f, g,* one card only.

Fix a thread of ſilk at the point H, the other end of which paſſing down the diviſion *d*, and over the pully I, runs along the bracket L, and goes out behind the partition M.

Take three cards from a piquet pack, and place one of them in each of the diviſions *e, f, g,* making the ſilk thread or line go under each of them. In the diviſion *c*, put the pack of cards from which you have taken the three cards that are in the other diviſions.

Then take another pack of cards, at the top of which are to be three cards of the ſame ſort with thoſe in the three ſmall diviſions; and making the paſs, bring them to the middle of the pack, and let them be drawn by three different perſons. Then give them all the cards to ſhuffle; after which place the pack in the diviſion *d*, and tell the parties they ſhall ſee the three cards they drew come, at their command, ſeparately out of the vaſe.

An aſſiſtant behind the partition then drawing the line with a gentle and equal motion, the three cards will gradually riſe out of the vaſe. Then take the cards out of the diviſion *c*, and ſhow that thoſe three cards are gone from the pack.

The vaſe muſt be placed ſo high that the inſide cannot be ſeen by the company. You may perform this experiment alſo without an aſſiſtant, by fixing a weight to the end of the ſilk line, which is to be placed on a ſupport, and let down at pleaſure by means of a ſpring in the partition.

The divinating perſpective glaſs.

17. **Let** a ſmall perſpective glaſs be made, that is wide enough, at the end where the object glaſs is placed, to hold a table ſimilar to the following.

1.131	10..132	19.133
2.231	11..232	20.233
3.331	12..332	21.333
4 121	13..122	22.123
5.221	14..222	23.223
6.321	15..322	24.323
7.111	16..112	25.113
8.211	17..212	26.213
9.311	18..312	27.313

Take a pack of cards that conſiſts of 27 only, and giving them to a perſon, deſire him to fix on any one, then ſhuffle them, and give the pack to you. Place the 27 cards in three heaps, by laying down one alternately on each heap; but before you lay each card down, ſhow it to the perſon, without ſeeing it yourſelf; and when the three heaps are finiſhed, aſk him at what number, from 1 to 27, he will have his card appear,

---

(c) This experiment may be performed without an aſſiſtant, if a table be placed againſt the partition, and the ſtring from the glaſs be made to paſs through a leg of it, and communicate with a ſmall trigger, which you may eaſily puſh down with your foot; and at the ſame time wiping the glaſs with your handkerchief, as if to make the card appear the more conſpicuous. It may alſo be diverſified, by having the figure of a head, ſuppoſe that of ſome abſent friend, in the place of the card.

appear, and in which heap it then is? Then look at the heap through the glaſs, and if the firſt of the three numbers which ſtands againſt that number it is be appear at be 1, put that heap at top; if the number be 2, put it in the middle; and if it be 3, put it at bottom. Then divide the cards into three heaps, in the ſame manner, a ſecond and a third time, and his card will then be at the number he choſe.

For example: Suppoſe he deſire that his card ſhall be the 20th from the top, and the firſt time of making the heaps, he ſay it is in the third heap: you then look at the table in the perſpective, holding it at the ſame time over that heap, and you ſee that the firſt figure is 2; you therefore put that figure in the middle of the pack. The ſecond and third times you in like manner put the heap in which he ſays it is, at the bottom, the number each time being 3. Then looking at the pack with your glaſs, as if to diſcover which the card was, you lay the cards down one by one, and the twentieth card will be that he fixed on.

You may ſhow the perſon his card in the ſame manner without aſking him at what number it ſhall appear, by fixing on any number yourſelf.

The foregoing experiments with the cards will be found ſufficient to explain moſt others of a ſimilar nature that have or may be made: the number of which is very great. To perform thoſe we have deſcribed requires no great practice; the two principal points are, the making the paſs in a dexterous manner, and a certain addreſs by which you influence a perſon to draw the card you preſent. Thoſe that are performed by the long card are in general the moſt eaſy, but they are confined to a pack of cards that is ready prepared; whereas thoſe which depend on making the paſs, may be performed with any pack that is offered.

Sect. III. *Experiments with Sympathetic Inks.* [See *Sympathetic Ink.*]

Experiments with Class I.

The book of fate.

1. Make a book of 70 or 80 leaves; and in the cover at the end of it let there be a caſe, which opens next the binding that it be not perceived.

At the top of each right hand page write any queſtion you pleaſe; and at the beginning of the book let there be a table of all thoſe queſtions, with the number of the page where each is contained. Then write with the common ink on ſeparate papers, each about half the ſize of the pages in the book, the ſame queſtions that are in the book, and under each of them write, with the ink made of the impregnation of ſaturn, or the diſſolution of biſmuth, the anſwer.

Soak a double paper in the vivifying liquor made of quick-lime and orpiment, or the phlogiſton of the liver of ſulphur, and place it, juſt before you make the experiment, in the caſe that is in the cover of the book.

Then deliver ſome of the papers on which the queſtions are wrote to the company; and after they have choſen ſuch as they would have anſwered, they put them in thoſe leaves where the ſame queſtions are contained, and, ſhutting the book for a few minutes, the ſulphureous ſpirit with which the paper in the cover of the book is imbibed, will penetrate the leaves, and make the anſwers viſible, which will be of a brown colour, and more or leſs deep in proportion to the time the book has been cloſed (d).

The marvellous portrait, fig. 17.

2. Make a box about four inches long, and three wide, as ABCD, and quite ſhallow. Let it ſhut with hinges and faſten with a hook; and let it have two bottoms, the loweſt of wood, that draws out by a groove, and the uppermoſt of paſteboard. Between theſe two bottoms is to be placed a paper dipped in the vivifying liquor mentioned in the laſt experiment. Let there be alſo a board of the ſame ſize with the inſide of the box, which being placed in it may preſs a paper againſt the paſteboard bottom.

Then take ſeveral pieces of paper, of the ſame ſize with the inſide of the box, and draw on them the figures of men and women, in different attitudes and employments, as walking, riding, reading, writing, &c. Theſe figures muſt be drawn with a new pen, or pencil, dipped in the impregnation of Saturn.

Being thus provided, and having privately placed the paper dipped in the vivyfying liquor between the two bottoms, you tell a perſon you will ſhow him what an abſent friend of his is doing at the preſent hour. You then give him the paper adapted to the employment you intend, and tell to write his friend's name at the bottom, that you may not change the paper. Then placing that paper next the paſteboard bottom, and putting the piece of wood over it, you ſhut the box. After amuſing him with diſcourſe for three or four minutes, you take out the paper, when he will ſee his friend in the employment you have aſſigned him.

The artificial hand.

3. Let a workman make a hand of wood, as in fig. 16. fixed at the end next the elbow to the piece E, the ends of which go through the ſcrews CD and EF. The fore and middle fingers, and the thumb, are to be moveable at their joints. There muſt go a wire through the arm, that is fixed at one end to the fore-finger, and at the other to the piece E, round which it is to move: under the two joints of the two fingers are alſo placed two ſmall ſprings, which are to raiſe it up.

To the fore-finger and thumb fix two ſmall rings, through which a pen may be put, ſo as not to impede their motion. Under the arm at the point I, place a ſmall braſs roller, which ſerves to ſuſtain the arm.

The pedeſtal on which this hand is placed muſt be at leaſt a foot long, if the hand be of the natural ſize, and about eight inches wide. This pedeſtal muſt be hollow, and at the part ST there muſt be an opening about three inches long, and two inches wide; the whole pedeſtal may be covered with a thin ſtuff, by which the hole will be concealed. There is to be a valve, or ſort of trap-door, on the inſide of the pedeſtal, which is to faſten againſt the opening.

Over the hand and pedeſtal place a glaſs frame, as in the figure: cover the hand with fine leather of fleſh colour, and decorate the arm with a ruffle and cuff, which will entirely conceal the machinery.

Then take a number of cards and write on them different queſtions; and on the ſame number of papers write, with the impregnation of lead, the anſwers. Give the cards to any one, and let him chooſe a queſtion; and you place the paper with the anſwer under the pen in the hand, letting him firſt ſee there is no writing on it (E). Now the pedeſtal being placed againſt a partition, the end F is to go through it. Therefore an aſſiſtant, upon a ſignal given, turns a handle fixed to F; and, as the piece E turns round, the wires that move the fingers and thumb are alternately lengthened and ſhortened, by which their joints are kept in continual motion; and the ſcrew at the ſame time turning gently from F towards G, gives the whole arm a motion which very much reſembles that of nature (F).

(d) If a weight be placed upon the book, the effect will be the ſooner produced. Or you may put the book in a box that will preſs it cloſe down.

The hand and pen ſerve here merely to aſſiſt the illuſion: but if a bit of ſponge, dipped in the vivifying liquor be placed at the end of the pen, as it goes over the writing on the paper, it will make it become gradually viſible, and in this caſe the trap-door and dipped paper may be omitted (G).

DECEPTION with CLASS II.

The writing againſt the wall.

4. TAKE ſeveral pieces of paper, of a ſize that you can put in any book that will go into your pocket, and write at the top of each of them a queſtion, with common ink, and under it write the anſwer with the ſolution of gold or ſilver. Give any of theſe papers, cloſely wrapt up, to a perſon, and tell him to place it againſt the wall of his chamber, and keeping the door locked he will next day find the anſwer wrote on it.

As the gold ink will ſometimes give a yellow caſt to the paper, you may previouſly give a ſlight tincture of that kind to the papers you uſe for this purpoſe.

DECEPTION with CLASS III.

Magical vegetations

5. On different papers draw the figures of ſeveral leaves or flowers with one of the colourleſs juices mentioned: then take one of the correſponding leaves or flowers, and laying it on an iron plate over a chafing-diſh of hot coals, let it burn to aſhes. Put theſe aſhes into a ſieve, in which there is ſome very fine ſteel-filings, and ſift them over the paper on which the flower is drawn, when they will adhere to the glutinous liquor, and form an exact repreſentation of the figure of the leaf or flower.

DECEPTIONS with CLASS IV.

The taliſman, fig. 7.

6. MAKE a little-triangular box, each ſide of which is to be about five inches, and let its inſide be divided into three parts. The firſt part A, which makes the bottom of the box, is to be covered by the ſecond part B, in form of a caſe, and let the top C exactly cover the part B, as expreſſed in the figure and the profiles.

Upon the bottom of the box let there be a plate of copper, about one-twentieth of an inch thick, on which let there be a number of hieroglyphic characters contiguous to each other, and cut in different ſorts of metal.

On the top of the cover place a knob O, that goes through it, and to which the copper triangle Q is to be fixed occaſionally, in ſuch a manner as it may go into the caſe B. There muſt be a ſpace of one quarter of an inch between the triangle Q and the bottom of the caſe B; into which another plate of copper, of that thickneſs may be placed.

The outſide of this taliſman may be decorated with uncommon figures or characters, to give it the appearance of greater myſtery.

On ſeveral pieces of paper, of the ſame ſize with the inſide of the taliſman, write different queſtions in common ink, and write the anſwers in thoſe different ſorts of ſympathetic ink that appear when heated, obſerving that each word of the anſwer is to be wrote in a different ink.

Having properly heated the triangle, and placed it under the cover, you introduce the taliſman, and tell any one of the company to chooſe one of the papers on which the queſtions are wrote, and place it in the taliſman, and he will immediately have an anſwer wrote on that paper, the words of which will be of different colours, according to the different metals of which the taliſman is compoſed. The paper being placed in the taliſman, and the cover placed over it, the heat of the triangle will make the anſwer viſible in a few moments. This experiment may be repeated if the triangle be made ſufficiently hot; and two papers may be placed in the taliſman at the ſame time.

This deception, when well executed, occaſions a ſurpriſe that cannot be conceived by a mere deſcription.

The ſibyls, fig. 5.

7. MAKE a wooden pedeſtal AB, about ten inches long, eight wide, and one deep: and at one end erect a box C, about ten inches high, eight broad, and two and an half deep.

The top of the pedeſtal muſt ſlide in a groove, on which inſcribe a dial M, of ſix inches diameter, and which is to be divided into nineteen equal parts, in twelve of which write the names of the months, and mark the reſpective ſigns of the zodiac; and in the ſeven other diviſions, which muſt be next the end B, write the days of the week, and mark the figures of the planets. Next the inner circle NO, make an opening into the box, of about one tenth of an inch, On the centre of the dial place an index that turns, freely on its centre.

Within the pedeſtal place a pulley P, about four inches diameter, which is to turn on an axis that is directly

---

(E) The paper dipped in the vivifying liquor is to be previouſly placed againſt the opening in the table, and ſupported by the trap-door.

(F) This might be performed without an aſſiſtant by means of a trigger placed in the leg of the table, and communicating with the handles, which the operator might thruſt down with his foot. Where expence is not regarded, there may be a complete figure of a man in wood, or plaſter of Paris, ſeated by the table.

(G) You may alſo have a glaſs ink-ſtand, with ſome of the vivifying liquor, into which the pen may be dipped, and it will then appear to write with common ink. The ſpectators ſhould not be permitted to come near this machine, which may be applied to ſeveral other purpoſes.

directly under the centre of the dial; and on the upper part of that axis fix a bent index R. which comes out at the opening made by the inner circle (H), and paſſes over thoſe ſeven diviſions only on which are wrote the days of the week.

Within the box C, let their be two rollers S and T, as in the figure: let that of S contain a ſpring: and at the end of T let there be a pulley V, of three quarters of an inch diameter, round which goes a ſtring or thread that paſſes under the ſmall pulley X, and is faſtened to that of P; ſo that when the laſt pulley makes about one-third of a turn, that of V may make three or four turns.

There muſt alſo be a ſcroll of paper, about two feet long, and each end of which muſt be paſted to one of the rollers. In the front of the box, between the two rollers, make an aperture D, about four inches long, and one inch and an half wide: to this opening let there be a little flap or ſlider, by which it may be cloſed at pleaſure.

The apparatus being thus diſpoſed, place the index R ſucceſſively againſt each of the diviſions marked with one of the planets; and as the paper is gradually wound upon the roller, mark, againſt that part which is at the aperture D, the name of one of the following ſibyls:

The Helleſpontian
Cumean
Artemiſian
Phrygian } ſibyl.
Albunean
Perſian
Libyan

On each of the ſeven cards write a different queſtion, and draw one of the ſeven planets. Next, take a memorandum book that contains ſeven leaves, and on each of them write the name of one of the foregoing ſibyls; in each of the leaves place ſeveral pieces of paper, and on each of them write, with the ſympathetic ink that does not appear till the paper is heated, different anſwers to the ſame queſtion.

Then give a perſon the ſeven cards on which the queſtions are wrote, and tell him to chooſe one of them privately, and conceal the reſt, ſo that it cannot poſſibly be known which of them he has choſen.

Next, tell him to place the index that points to the month againſt that in which he was born (I), and to place the index of the planets againſt that which is on the card he has choſen, and which is to preſide over the anſwer: you tell him to do this privately, that no one may ſee him, and after that to cover the dial with his handkerchief. Then let him open the door that is before the aperture in the box, and tell you the name of the ſibyl there viſible.

You then open the memorandum-book, and taking out the papers that are in the leaf where the name of the ſibyl juſt mentioned is wrote, you deſire him to chooſe any one of them he thinks proper. The taliſman uſed in the laſt experiment being properly heated, is then to be introduced, when you direct the perſon to put the blank paper into it; and taking it out a few moments after, he will find the anſwer to his queſtion.

To make this operation appear the more extraordinary, it will be proper to have a ſmall preſs or cupboard, at the back of which there is a door that opens into an adjoining room, by which means an aſſiſtant having prepared the taliſman, may place it in the cup-board the moment before it is wanted. This contrivance will be uſeful on many other occaſions.

The magic urn.

8. PROVIDE an urn of wood or metal about ſix inches high, and two and an half diameter in the wideſt part, and of ſuch figure in other reſpects as you think proper (ſee fig. 9.). Let there be a cylinder of copper C, fig. 10.) of about one-eighth of an inch diameter, which is to fill a hole AB made in the urn.— The top of this cylinder is to be in the top of the urn, ſo that it may be eaſily taken out. To this urn there muſt be a cover D, which fits it exactly.

On a ſmall ſquare piece of paper draw the figure of a flower or leaf, with that ſort of ſympathetic ink whoſe colour moſt reſembles it. You then preſent ſeveral ſorts of flowers or leaves to a perſon, and deſire him to chooſe any one of them. Then put that flower on a chafingdiſh of hot coals; and, taking the paper on which it is ſecretly drawn, you give it to the perſon to examine, and then put it in the urn, having previouſly heated the cylinder (K). Then taking ſome of the aſhes of the burnt flower, you ſtrew them over the paper, after which you take it out and ſhow the company the figure of that flower. While the flower is burning, you may ſprinkle ſome powder over it, ſuppoſe that of ſaltpetre; and by that, mixed with the aſhes of the flower, the company may imagine the effect is produced.

The preſs or cupboard mentioned in the preceding experiment, will be here very convenient for heating the cylinder and placing it in the urn. A ſimilar deception may be performed by putting the paper in a copper veſſel, that may be placed on an iron plate over the chafingdiſh in which the flower is burnt. But this method has not ſo myſterious an appearance as the other, and in ſome perſons may cauſe a ſuſpicion that the effect is produced by heat.

The convertible card.

9. To perform this experiment, you muſt obſerve, that there are ſeveral letters which may be changed into others, without any appearance of the alteration; as, the *a* into *d*, the *c* into *a*, *e*, *d*, *g*, *o*, or *q*, the *i* into *b*, *d*, or *l*, the *l* into *t*, the *o* into *a*, *d*, *g*, or *q*, the *v* into *y*, &c.

Take a parcel of cards, ſuppoſe 20, and on one of them write, with the ink of the fourth claſs, the word *law* (L), and on the other, with the ſame ink, the words *old woman*; then holding them to the fire, they will both become viſible. Now you will obſerve, that

---

(H) If the axis be made to paſs through the top of the pedeſtal, this opening will not be neceſſary.

(I) Theſe months and the index are of no other uſe than to give the experiment an air of great myſtery.

(K) There are ſome ſorts of ſympathetic inks that require much more heat than others.

(L) Theſe letters ſhould not be joined.

by altering the *a* in the word *law* into *d*, and adding *o* before the *l*, and *oman* after the *w*, it becomes *old woman*. Therefore, you make thoſe alterations with the inviſible ink, and let it remain ſo. On the reſt of the cards you write any words you think fit.

Preſent the cards in ſuch a manner to two perſons, that one of them ſhould draw the word *law*, and the other the words *old woman*. You then tell the perſon who drew the word *law*, that it ſhall diſappear, and the words on the other card ſhall be wrote in its place; and that you may not change the cards, deſire each of the parties to write his name on his card. Then putting the cards together, and holding them before the fire, as if to dry the names juſt wrote, the word *law* will preſently change into *old woman*.

This experiment may be varied by fixing on a word that may be changed into three other words, and making four perſons draw the cards on which thoſe words are wrote; and it may be further diverſified by chooſing three ſuch words, as that the firſt can be changed into the ſecond, and the ſecond into the third. You then tell him who drew the firſt word, that it ſhall be changed into that drawn by the ſecond perſon; and him you tell, that his word ſhall be changed into that of the third perſon.

The oracular letters.

10. Write on ſeveral ſlips of paper different queſtions, and ſuch as may be anſwered by the name of ſome perſon; for example, Who is the merrieſt man in the company? Anſwer, Mr * * *. To whom will Miſs * * * be married? Anſwer, To Mr * * *. Theſe queſtions are to be wrote in the ſympathetic ink of this claſs, and expoſed to the fire, and the anſwers wrote in the ſame ink, and left inviſible. The papers are to be folded in form of letters, and in ſuch manner that the part where the name is wrote ſhall be directly under the ſeal, and the heat of the wax will make it viſible. Then give the letter to the perſon who requires the anſwer, and he will find it plainly wrote.

A deception ſimilar to this may be made with a number of blank cards, on each of which an ace of ſpades is drawn with the inviſible ink; then let a perſon chooſe any one of them, and incloſe it in a letter-caſe, prepared in ſuch manner that the figure of the ace ſhall be directly under the ſeal, and on opening the letter it will be immediately viſible.

Deceptions with Class V.

The incomprehenſible writing.

11. Have a box that is divided into three parts, after the ſame manner as the taliſman in the 21ſt experiment, except that, inſtead of being triangular, it muſt be of a long ſquare (ſee fig. 14.). Divide its top B into two equal parts D and E, as in fig. 13. and to the part D adjuſt a plate of copper L, about one quarter of an inch thick, and under both the plate L and the opening E place a cloth. The upper part C muſt have a button by which it may be fixed on the cover B, ſo as to appear of one piece with it.

At the bottom of the box place a piece of cloth, or other ſtuff, on which you may ſtamp certain myſterious characters, and obſerve that the bottom of the cover muſt reſt upon this cloth.

Then provide a ſlip of paper GH (fig. 12.) of the ſame ſize with the bottom of the box; and at each end of it write, with the green ſympathetic ink, the name of a different card, and make ſome private mark by which you can tell at which end each name is wrote (m).

Take a parcel of cards, and offer thoſe two of them whoſe names are wrote on the paper to the two perſons, that they may draw them. You tell the parties to keep their cards to themſelves, and you propoſe to make the names of thoſe cards appear upon a ſlip of paper, which you put into the box. You then aſk which name of the two cards ſhall appear firſt. The copperplate being previouſly heated and placed in the cover, you put it over that end of the paper on which is the name required, and it will preſently appear. Then taking the paper out and ſhowing the name wrote, you put it in again, turning the other end to the ſide of the box where the plate is, and it will in like manner become viſible.

The firſt name may be made to diſappear at the ſame time that the ſecond appears, if the cloth at the end oppoſite to that where the plate is be made damp.

Winter changed into ſpring.

12. Take a print that repreſents winter, and trace over the proper parts of the trees, plants, and ground with the green ſympathetic ink; obſerving to make ſome parts deeper than others, according to their diſtance. When thoſe parts are dry, paint the other objects with their natural colours. Then put the print in a frame with a glaſs, and cover the back of it with a paper that is paſted over its border only.

When this print is expoſed to the heat of a moderate fire, or the warm rays of the ſun, all the graſs and foliage will turn to a pleaſing green; and if a yellow tint be given to ſome parts of the print, before the ſympathetic ink be drawn over, this green will be of different ſhades; and the ſcene that a minute before repreſented winter, will now be changed to ſpring. When this print is placed in the cold, winter will again appear, and will again be driven away by the warm rays of the ſun. This alternate change of ſeaſons may be repeated as often as you pleaſe; remembering, however, as was before obſerved, not to make the print at any time too hot, for then a faded autumn will for ever remain.

Deceptions with Class VII.

The revivified bouquets.

13. Provide a number of artificial flowers, ſuch as roſes, jonquils, pinks, or any other you find convenient. Theſe flowers muſt be made of white thread or ſilk, and their leaves of parchment. Dip the roſes in the red ſympathetic ink, the jonquils in the yellow, the pinks in the violet, and their leaves in a ſolution of ſalt of tartar. When they are all dry, form them into ſmall bouquets, which will appear white, and may be uſed in this experiment, either the day they are dipped, or ſeveral days after.

You take one of theſe bouquets, and after ſhowing the company that every part of it is white, you dip it in an infuſion of any of the blue colours mentioned under the article *Colour-Making*, nº 13, and, drawing it preſently out, all the flowers and leaves will appear in their natural colours (n).

(m) That there may be no ſuſpicion of the paper being prepared, you may cut it from a whole ſheet, before the company, having previouſly wrote the name.

The transcolorated writing.

15. Write on a paper, with the violet liquor, as many letters or words as you pleaſe; and aſk any perſon whether he will have that writing turn to yellow, green, or red.

Have a ſponge with three ſides that you can readily diſtinguiſh, and dip each of its ſides in one of the three ſympathetic inks. Draw the ſide of the ſponge that correſponds to the colour the perſon has choſe, over the writing once only; and it will directly change to the colour required (o).

Sect. III. *Miſcellaneous performances.*

To tell odds or evens.

15. *A perſon having an even number of counters in one hand, and an odd number in the other, to tell in which hand the odd or even number is.* Let the perſon multiply the number in his right-hand by an odd number, and the number in his left-hand by an even number, and tell you if the ſum of the products added together be odd or even. If it be even, the even number is in the right-hand; but, if it be odd, the even number is in the left-hand.

Example.

1. Number in the right hand	18	In the left	7
Multipliers	3		2
	54		14
	14		
Their ſum	68		

2. Number in the right hand	7	In the left	18
Multipliers	3		2
	21		36
	36		
Their ſum	57		

To tell at what hour any perſon intends to riſe.

16. *To tell, by the dial of a watch, at what hour any perſon intends to riſe.* Let the perſon ſet the hand of the dial to any hour he pleaſes, and tell you what hour that is; and to the number of that hour you add, in your mind, 12. Then tell him to count privately the number of that amount upon the dial, beginning with the next hour to that on which he propoſes to riſe, and counting backwards, firſt reckoning the number of the hour at which he has placed the hand. An example will make this plain.

Suppoſe the hour at which he intends to riſe be 8, and that he has placed the hand at 5. You add 12 to 5, and tell him to count 17 on the dial, firſt reckoning 5, the hour at which the index ſtands, and counting backwards from the hour at which he intends to riſe; and the number 17 will neceſſarily end at 8, which ſhows that to be the hour he choſe.

That the hour at which the counting ends muſt be that on which he propoſed to riſe, will be evident on a little reflection; for if he had began at that hour and counted 12, he would neceſſarily have come to it again; and calling the number 17, by adding 5 to it, only ſerves to diſguiſe the matter, but can make no ſort of difference in the counting.

The magical century

17. If the number 11 be multiplied by any one of the nine digits, the two figures of the product will always be ſimilar. As follows:

11	11	11	11	11	11	11	11	11
1	2	3	4	5	6	7	8	9
11	22	33	44	55	66	77	88	99

Place a parcel of counters on a table, and propoſe to any one to add alternately, a certain number of thoſe counters, till they amount to 100, but never to add more than 10 at a time. You tell him, moreover, that, if you ſtake firſt, he ſhall never make the even century, but you will. In order to which, you muſt firſt ſtake 1, and remembering the order of the above ſeries, 11, 22, 33, &c. you conſtantly add, to what he ſtakes, as many as will make one more than the numbers of that ſeries, that is, as will make 12, 23, 34, &c. till you come to 89, after which the other party cannot make the century himſelf, nor prevent you from making it.

If the other party has no knowledge of numbers, you may ſtake any other number firſt, under ten, provided you take care to ſecure ſome one of the laſt terms, as 56, 67, 78, &c.

This deception may be performed with other numbers; and in order to ſucceed, you muſt divide the number to be attained by a number that has one digit more than what you can ſtake each time, and the remainder will be the number you muſt firſt ſtake. Obſerve, that, to be ſure of ſucceſs, there muſt be always a remainder. Suppoſe, for example, the number to be attained is 52, making uſe of a pack of cards inſtead of counters, and that you are never to add more than 6: then divide 52 by the next number above 6, that is, by 7, and the remainder, which is 3, will be the number you muſt ſtake firſt; and whatever the other ſtakes, you muſt add as much to it as will make it equal to the number by which you divided, that is, 7. Therefore, if his firſt ſtake be 1, you muſt ſtake 6, &c. ſo that your ſecond ſtake will make the heap 10, your third ſtake will make it 17, and ſo on, till you come to 45, when, as he cannot ſtake more than 6, you muſt make the number 52.

In this, as in the former caſe, if the other perſon has no knowledge of numbers, you may ſtake any number firſt under 7; or you may let him ſtake firſt, only taking care to ſecure either of the numbers 10, 17, 24, 31, &c. after which he cannot make 52, if you

---

(n) The liquor ſhould be put into a ſort of jar with a narrow neck, that it may not be ſeen by the company; and you ſhould draw the flowers gently out, that the liquor may drop if thin, and they may have time to acquire their colours.

(o) The ſponge ſhould be well cleaned immediately after the experiment.

you conſtantly add as many to his ſtake as will make it 7.

To tell what number a perſon privately fixes on.

18. *A perſon privately fixing on any number, to tell him that number.* After the perſon has fixed on a number, bid him double it and add 4 to that ſum, then multiply the whole by 5; to the product let him add 12, and multiply the amount by 10. From the ſum of the whole let him deduct 320, and tell you the remainder; from which if you cut off the two laſt figures, the number that remains will be that fixed on.

Example.

Let the number choſen be - -	7
Which doubled is - - -	14
And 4 added to it, makes - - -	18
Which multiplied by 5, gives - -	90
To which 12 being added, it is -	102
That multiplied by 10 makes - -	1020
From which deducting 320, the remainder is	700
And by ſtriking off the two cyphers, it becomes the original number - - -	7

To tell the number of points thrown up by 3 dice, without ſeeing them.

19. *Three dice being thrown on a table, to tell the number of each of them, and the order in which they ſtand.* Let the perſon who has thrown the dice double the number of that next his left hand, and add 5 to that ſum; then multiply the amount by 5, and to the product add the number of the middle die; then let the whole be multiplied by 10, and to that product add the number of the third die. From the total let there be ſubtracted 250, and the figure of the number that remains will anſwer to the points of the three dice as they ſtand on the table.

Example. Suppoſe the points of the three dice thrown on the table to be 4, 6, and 2,

Then the double of the firſt die will be -	8
To which add - - - -	5
	13
	5
That ſum multiplied by 5 will be -	65
To which add the number of the middle die	6
	71
And multiply the ſum by - - -	10
	710
To that product add the number of the third die	2
From the total - - -	7 2
Subtract - - -	250
And the three remaining figures	264

will anſwer to the number on the dice, and ſhew the order in which they ſtand.

To tell in what finger, joint, &c. a ring has been privately put.

20. *Some perſon in company having put a ring privately on one of his fingers; to name the perſon, the hand, the finger, and the joint, to which it is placed.* Let a third perſon double the number of the order in which he ſtands who has the ring, and add 5 to that number; then multiply that ſum by 5, and to the product add 10. Let him next add 1 to the laſt number if the ring be on the right hand, and 2 if on the left, and multiply the whole by 10: to this product he muſt add the number of the finger (counting the thumb as the firſt finger), then multiply the whole again by 10. Let him then add the number of the joint; and, laſtly, to the whole join 35.

He is then to tell you the amount of the whole, from which you are to ſubtract 3535, and the remainder will conſiſt of four figures, the firſt of which will expreſs the rank in which the perſon ſtands, the ſecond the hand (the number 1 ſignifying the right hand, and 2 the left), the third number the finger, and the fourth the joint.

Example. Suppoſe the perſon who ſtands the third in order has put the ring upon the ſecond joint of the thumb of his left hand; then

The double of the rank of the third perſon is	6
To which add	5
	11
Multiply the ſum by	5
	55
To which add	10
And the number of the left hand	2
	67
Which being multipled by	10
	670
To which add the number of the thumb	1
	671
And multiply again by	10
	6710
Then add the number of the joint	2
And laſtly the number	35
	6747
From which deducting	3535
The remainder is	3212

Of which, as we have ſaid, the 3 denotes the third perſon, the 2 the left hand, the 1 the thumb, and the laſt 2 the ſecond joint.

The burnt writing reſtored.

21. Cover the outſide of a ſmall memorandum-book with black paper, and in one of its inſide covers make a flap, to open ſecretly, and obſerve there muſt be nothing over the flap but the black paper that covers the book.

Mix ſoot with black or brown ſoap, with which rub the ſide of the black paper next the flap; then wipe it quite clean, ſo that a white paper preſſed againſt it will not receive any mark.

Provide a black lead pencil that will not mark without preſſing hard on the paper. Have likewiſe a ſmall box, about the ſize of the memorandum-book, and that opens on both ſides, but on one of them by a private method. Give a perſon the pencil, and a ſlip of thin paper, on which he is to write what he thinks proper: you preſent him the memorandum-book at the ſame time, that he may not write on the bare board. You tell him to keep what he writes to himſelf, and direct him to burn it on an iron plate laid on a chafingdiſh of coals, and give you the aſhes. You then go into another room to fetch your magic box above deſcribed, and take with you the memorandum-book. Having previouſly placed a paper under the flap in the cover of the book, when he preſſes hard with the pencil, to write on the paper, every ſtroke, by means of the ſtuff rubbed on the black paper, will appear on that under the flap. You therefore take it out, and put it into one ſide of the box.

You then return to the other room, and taking a ſlip of blank paper, you put it into the other ſide of the box, ſtrewing the aſhes of the burnt paper over it. Then ſhaking the box for a few moments, and at the ſame time turning it dexterouſly over, you open the other ſide, and ſhow the perſon the paper you firſt put in, the writing on which he will readily acknowledge to be his.

The tranſpoſable pieces.

22. Take two guineas and two ſhillings, and grind part of them away, on one ſide only, ſo that they may be but of half the common thickneſs; and obſerve that they muſt be quite thin at the edge: then rivet a guinea and a ſhilling together. Lay one of theſe double pieces with the ſhilling upwards, on the palm of your hand, at the bottom of your three firſt fingers; and lay the other piece, with the guinea upward, in like manner, in the other hand. Let the company take notice in which hand is the guinea, and in which the ſhilling. Then as you ſhut your hands, you naturally turn the pieces over; and when you open them again, the ſhilling and the guinea will appear to have changed their places.

The penetrative guinea.

23. Provide a round tin-box, of the ſize of a large ſnuff-box; and in this place eight other boxes, which will go eaſily into each other, and let the leaſt of them be of a ſize to hold a guinea. Each of theſe boxes ſhould ſhut with a hinge: and to the leaſt of them there muſt be a ſmall lock, that is faſtened with a ſpring, but cannot be opened without a key: and obſerve that all theſe boxes muſt ſhut ſo freely, that they may be all cloſed at once. Place theſe boxes in each other, with their tops open (ſee fig. 12.), in the drawer of the table on which you make your experiments; or, if you pleaſe, in your pocket, in ſuch a manner that they cannot be diſplaced.

Then aſk a perſon to lend you a new guinea, and deſire him to mark it, that it may not be changed. You take this piece in one hand, and in the other you have another of the ſame appearance; and putting your hand in the drawer you ſlip the piece that is marked into the leaſt box, and ſhutting them all at once, you take them out. Then ſhowing the piece you have in your hand, and which the company ſuppoſe to be the ſame that was marked, you pretend to make it paſs through the box, and dexterouſly convey it away.

You then preſent the box, for the ſpectators do not yet know there are more than one, to any perſon in company; who, when he opens it, finds another, and another, till he comes to the laſt, but that he cannot open without the key (ſee fig. 13.) which you then give him, and retiring to a diſtant part of the room, you tell him to take out the guinea himſelf, and ſee if it be that he marked.

This deception may be made more ſurpriſing, by putting the key into the ſnuff-box of one of the company; which you may do by aſking him for a pinch of his ſnuff, and at the ſame time conceal the key, which muſt be very ſmall, among the ſnuff: and when the perſon who is to open the box aſks for the key, you tell him that one of the company has it in his ſnuff-box. This part of the deception may likewiſe be performed by means of a confederate.

The three magic pictures. Plate CCLXVII. fig. 14, 15.

24. ABCD, fig. 15. repreſents a ſmall wooden box ſeven or eight inches long, two and a half broad, and half an inch deep; the bottom of which by means of two croſs-pieces, is divided into three equal parts. EFGH repreſents the lid, which is faſtened to the bottom by a hinge, and has in front a ſmall plate ſhaped like a lock, and two ſmall eyes for hooks, which ſerve to faſten it when it is ſhut. ILM are three ſmall flexible ſprings, flat, and about ¾ inch long. NOP are three wooden tablets of the ſame ſize, upon which are marked the figures 3, 4, and 5. The tablets are of different thickneſſes, and the difference is ſo ſmall as not to be perceived by the eye. The outſide of the box is covered with ſhagreen or morocco leather, and on the inſide with ſilk taffety; theſe coverings being indiſpenſibly neceſſary to hide the three ſmall ſprings abovementioned. Fig. 14. ſhows the two hinges E and F bent cloſe to the top of the lid ABCD; the piece of braſs G, ſimilar to a lock, being alſo curved to the lid. A ſmall braſs ſtud is rivetted upon the end of each of theſe ſprings inſerted into the lid, and paſſes through the curved part of each of the hinges and the lock; ſo that on the outſide they appear as the heads of ſmall pins which faſten them upon the lid. Theſe ſmall ſtuds will be elevated more or leſs according to the thickneſſes of the tablets, that may be ſhut up in each of the partitions in which they may be found placed; ſo that the tablet N elevates them more than the tablet O, and the latter leſs than P; though theſe elevations are but barely ſenſible to the ſight or touch, and that by a perſon accuſtomed to look at or handle them. Thus it may be eaſily known in whatever order the tablets are placed, however carefully ſhut up; and conſequently the numbers named as incloſed.

Give now the box to any indifferent perſon, leave him at liberty to form with the tablets any number he pleaſes, deſiring him to return the box well ſhut up; then taking the box, and determining by the touch, or rather by the eye, what order the tablets are in, it will be very ſurpriſing to hear you declare the number without ſeeing it.

N. B. It will ſtill be equally poſſible to diſcover the number, though the tablets ſhould be returned with the bottom upwards, or even though one ſhould be withdrawn in order to defeat your deſign; particularly if care has been taken to make the ſtuds remain even with the plates when a number is omitted.

The numerical table.

25. *To diſcover any particular counter which has been ſecretly placed within a box that turns upon it.*—This table, which is made of wood, is repreſented by A, fig. 16. It is of an hexagonal ſhape, and about three or four inches diameter. For the ſake of neatneſs in appearance, a proportionably ſized pillar with a foot is fixed to it, round a center there turns a ſmall round box B of about ¾ inch diameter in the inſide, the lid of which takes off at B. At the bottom of this box, near the circumference in the inſide, is fixed a braſs pin to fit a hole made in a flat ivory counter ſhown at *b*, fig. 17. The pin and counter are repreſented in fig. 18. which is a flat view of fig. 16, with the lid of the box B taken off. Oppoſite to the pin *b*

in the ſame figure, D repreſents a fine dot deſigned as a ſecret mark on the outſide of the box, which ſerves always as a guide to the number of the counter privately placed in the inſide of the box, as is afterwards particularly explained. Upon one of the corners of the table is an ivory mark C, fig. 16. and 18. which ſerves to place the ſpot *a* upon the counters in its proper poſition. See fig. 17. There are 12 counters fitted to the box B, marked 10, 20, &c. as far as 120, on the middle of each. On each of thoſe counters is the hole *b*, fig 17, and 11, which goes over the pin in the bottom of the box; and on one ſide of this hole a red or black ſpot is placed in the following manner. When n° 10 is put into the box, the ſpot muſt be ſo far to the left hand of the hole, that when it is brought to the mark C, fig. 18, the hole *b* will be oppoſite to the ſide marked 1. When n° 20 is put in, the ſpot being brought to the mark C, will carry the hole to the corner marked 2. When n° 30 is put in, and the ſpot brought oppoſite to C, the hole will be brought againſt the ſide marked 3, as is ſhown in the figure, and ſo on for the reſt. Therefore, as oppoſite to the braſs pin, or hole in the counter on the outſide of the box B, there is a ſecret mark D already mentioned, this muſt ſerve as an index to the number contained, in the box, according as it is oppoſite to a ſide or corner of the table.

Give now the table with the box and the 12 counters to any perſon, and deſire him to put one of the counters ſecretly into the box, keeping the reſt to himſelf; and after having placed the hole over the pin in the box, to place particularly, by turning the box round, the ſpot *a* againſt the mark C on the table. Let him then cover the box, give you the table, and keep the counters to himſelf. Obſerve then privately what ſide or corner the ſecret outſide mark D ſtands againſt, reckon the tens accordingly, and tell him the number.

The magic well.

26. *To draw out of the well with a bucket any one of four liquors which have been previouſly mixed and put into it.* Provide two tin cylinders of ſeven or eight inches height; the diameter of the largeſt, repreſented by AB fig. 19. to be four inches, and that of the leaſt, CD, two inches. Place the ſmall one within the larger, and connect them together by ſoldering to them four tin partitions, making the equal ſpaces *e*, *f*, *g*, *h*. Turn a piece of wood three inches thick, hollow withinſide, and lined with tin, of which a ſection is given, fig. 20. Into this the exterior cylinder ſhould be cloſely fitted at *a* and *b*. Another circle of wood (of which a ſection is given fig. 21.) hollowed at *a*, *b*, and *c*, is alſo to be procured, and which may cover exactly the ſpace between the two cylinders; and laſtly, let the whole be conſtructed in ſuch a manner, that when theſe three ſeparate pieces are placed together, they may repreſent a well, as in fig. 22. The two braſs or wooden pillars AA, with the axis and handle C, ſerve to let down and draw up a ſmall glaſs bucket B, an inch and an half in diameter. Make alſo four tin reſervoirs of the ſame height with the cylinder, and ſo ſhaped as to fill the four ſpaces *e*, *f*, *g*, *h*, (fig. 19.) which muſt be well cloſed at their extremities B and C. On the top of each make a ſmall hole about the tenth part of an inch diameter, and ſolder at the baſe C a ſmall tube D, the end of which ſhould be bent towards the inſide of the well when the reſervoir is placed in it. Solder on the top of each reſervoir a ſmall ſpring lever and prop ABDE, fig. 23. This ſpring will ſerve always to preſs the end of the lever D down upon the hole at the top of the reſervoir B; and in order to cover it more perfectly, a ſmall piece of leather is to be glued on to the end of the lever D. Laſtly, a ſmall peg or ſtud C is placed at the end of each of the levers, and which muſt be cloſe to the under part of the wooden circle which covers the reſervoirs. To conceal theſe ſtuds, and at the ſame time to be able to preſs upon them with the fingers, circular apertures, as ſhown in fig. 21. muſt be made in the piece of wood, the top covered with a piece of vellum, and the whole neatly painted with oil-colour.

If now you plunge one of theſe reſervoirs perpendicularly into any liquor, in preſſing on the ſtud, ſo as to uncover the hole at the top, it will be filled with the liquor in proportion to the depth to which it is immerged; and as long as the lever continues to preſs upon the hole by means of the ſpring, the liquor cannot run out for want of air, though it will do ſo the moment the ſtud is preſſed upon and the air admitted. If the reſervoir is properly placed, then the liquor will flow out of it into the glaſs-bucket when let down to a proper depth.

Fill now the four reſervoirs with the four different liquors; putting them in their places, and covering them with the circular top. Take a quantity of the ſame liquors, mix them well together and pour the whole into the well; after which you may draw out any one which the company deſires, by letting down the bucket, and preſſing ſecretly upon the ſtud belonging to the reſervoir which contains it, and which will thus diſcharge the liquor it contains.

The reſuſcitated flower. Plate CCLXVI.

27. Provide a ſmall tin mortar, that is double, as A (fig. 8,) whoſe bottom B turns round on an axis, by means of a ſpring which communicates with the piece C. There muſt be a hollow ſpace under the falſe bottom. To the under ſide of the bottom faſten, by a thread of fine ſilk, a flower, with its ſtalk and leaves.

Then take a flower that exactly reſembles the other, and plucking it from the ſtalk, and all the leaves from each other, put them into the mortar, and pound them with a ſmall peſtle; after which you ſhow the mortar to the company, that they may ſee the parts are all bruiſed.

Then taking the mortar up in your hands, you hold it over the flame of a lamp or candle, by whoſe warmth the flower is ſuppoſed to be reſtored; and at the ſame time preſſing the piece at C, the bottom will turn round, the bruiſed parts deſcend into the ſpace under the bottom, and the whole flower will be at top: you then put your hand into the mortar, and eaſily breaking the ſilk thread, which may be very ſhort as well as fine, you take the flower out and preſent it to the company.

There is an experiment ſimilar to this, in which a live bird is concealed at the bottom of the mortar, and one that is dead is pounded in it; after which, by the motion of the bottom, the live bird is ſet at liberty. But ſurely the pounding of a bird in a mortar, though it be dead, muſt produce, in perſons of any delicacy, more diſguſt than entertainment.

BRITISH MUSEUM

The luminous oracle

28. Procure a tin box ABCD (fig. 1.) about eight inches high, four wide, and two deep, and let it be fixed on the wooden ſtand E. On two of the inſides let there be a groove FG; and in the front an opening I, three inches wide and one high.

At the back of the box let there be a little tin-door, that opens outward, by which two wax candles M may be put in. Let the top of the box have a cover of the ſame metal, in which there are ſeveral holes, and which may be taken off at pleaſure.

Provide a double glaſs OP (fig. 2.) conſtructed in the ſame manner as that in the laſt experiment. On one of its ſides you are to paſte a black paper, the length of which is to be divided into three parts, and the breadth into fifteen; in every two of theſe fifteen diviſions you cut out letters, which will make in the whole three anſwers to three queſtions that may be propoſed. On the other ſide of the glaſs paſte a very thin paper, and to the top faſten a ſmall cord, by which they may be made to riſe or deſcend in the groove FG.

Then take a ſlip of paſteboard RS (fig. 3.), one inch and a half wide and three inches long, which is to be divided into fifteen equal parts ſimilar to thoſe of the paper OP, and cut out ſpaces, as in the figure, ſo that this paper, ſliding horizontally before OP, will either cover or conceal the letters cut in that.

This paſteboard is to ſlide between two braſs wires, and is to be faſtened to one ſide of the box, by a ſtring that communicates with a ſmall braſs ſpring; and to the other ſide, by a ſtring faſtened to the box by a ſmall piece of wax, ſo ſituated that the ſtring may be eaſily ſet at liberty by the heat of the candles placed in the box.

Take a parcel of cards, and write on them different queſtions, three of which are to correſpond with the anſwers on the glaſs. Shuffle theſe cards, and let a perſon draw any one of the three queſtions. Then by raiſing the glaſs you bring the anſwer againſt the hole in the front of the box. You next place the candles in the box, the heat of which will melt the wax that holds the paper RS, which being then drawn by the ſpring, the anſwer will be viſible; and in proportion as the compoſition between the glaſſes becomes diluted by the increaſe of the heat, the letters will become more ſtrongly illuminated.

The letters cut in the paper may be made to anſwer ſeveral different queſtions, as have been explained in other experiments; and the whole parcel of cards may conſiſt of queſtions that may be anſwered by one or other of the three diviſions in the paper.

A flower produced from its aſhes.

29. Make a tin box ABCD (fig. 4.) with a cover M, that takes off. Let this box be ſupported by the pedeſtal FGHI, of the ſame metal, and on which there is a little door L. In the front of this box is to be a glaſs O.

In a groove, at a ſmall diſtance from O, place a double glaſs of the ſame ſort with that in the laſt experiment. Between the front and back glaſſes place a ſmall upright tin tube ſupported by the croſs-piece R. Let there be alſo a ſmall chafingdiſh placed in the pedeſtal FGHI. The box is to be open behind. You privately place a flower (Q) in the tin tube R; and preſenting one that reſembles it to any perſon (R) deſire him to burn it on the coals in the chafing-diſh.

You then ſtrew ſome powder over the coals, which may be ſuppoſed to aid the aſhes in producing the flower; and then put the chafingdiſh in the pedeſtal, under the box. As the heat by degrees melts the compoſition between the glaſſes, the flower will gradually appear; but when the chafingdiſh is taken away, and the power of the aſhes is ſuppoſed to be removed, the flower ſoon diſappears.

For entertaining experiments, illuſions, &c. of a philoſophical nature, ſee the articles ACOUSTICS, CATOPTRICS, CHROMATICS, DIOPTRICS, ELECTRICITY, HYDROSTATICS, MAGNETISM, PYROTECHNICS, &c.

Leger-line, Leghorn.

Leghorn.

LEGER-line, in muſic, one added to the ſtaff of five lines, when the aſcending or deſcending notes run very high or low; there are ſometimes many of theſe lines both above and below the ſtaff, to the number of four or five.

LEGHORN, anciently called *Liburnus Portus*, but by the modern Italians *Livorno*, a handſome town of Italy, in the duchy of Tuſcany, and a free port, about 30 miles ſouth weſt from Florence, in the territory of Piſa. The only defect of the harbour is its being too ſhallow for large ſhips. Coſmo I. had this town in exchange for Sarzana, from the Genoeſe: and it is the only ſea-port in the duchy. It was then but a mean unhealthy place; but it is now very handſome and well-built, with broad, ſtraight, parallel ſtreets. It is alſo well fortified; but wants good water, which muſt be brought from Piſa, 14 miles diſtant. It is about 2 miles in circuit, and the general form of it is ſquare. Part of it has the convenience of canals; one of which is 5 miles in length, and joining the Arno, merchandiſe and paſſengers are thus conveyed to Piſa. The port, conſiſting of two havens, one for the duke's galleys, and the other for merchant ſhips, is ſurrounded with a double mole, above a mile and a half in length, and defended, together with the town, by a good citadel and 12 forts. Roman Catholics, Jews, Greeks, Armenians, Mahometans, and even the Engliſh factory, are indulged in the public exerciſe of their religion, but other Proteſtants muſt be ſatisfied with the private. The trade carried on here is very great, and moſt of it paſſes through the hands of the Jews. Though only two piaſtres, or ſcudi, are paid for every bale,

---

(Q) This flower muſt not be placed ſo near as to make it in the leaſt degree viſible.

(R) You may preſent ſeveral flowers, and let the perſon chooſe any one of them. In this caſe, while he is burning the flower, you fetch the box from another apartment, and at the ſame time put in a correſponding flower, which will make the experiment ſtill more ſurpriſing.

bale, great or ſmall, imported or exported, yet the duties on all proviſions and commodities brought from the continent to the town are very heavy. The number of the inhabitants is ſaid to be about 45,000; and one third of theſe are Jews, who live in a particular quarter, but without any mark of diſtinction, and have a fine ſynagogue. They have engroſſed the coral manufactory, have a conſiderable trade, and poſſeſs the chief riches of the place. The garriſon conſiſts of 2000 men. The walks on the ramparts are very agreeable. There is good anchorage in the road; but ſhips riding there are much expoſed to the weather and the Barbary corſairs. The number of Engliſh families in Leghorn are about 36; they are much favoured by the government, and carry on a good trade. The power of the inquiſition is limited to eccleſiaſtical matters and Roman Catholics. There are a great many Turkiſh ſlaves here, brought in by the duke's galleys, who are often ſent out on a cruiſe againſt the corſairs of Barbary. The lighthouſe ſtands on a rock in the ſea; near which is the Lazaretto, where quarantine is performed. Another ſource, from which the duke draws a great revenue, is the monopoly of brandy, tobacco, and ſalt; but that, with the heavy duties, makes proviſions dear. The Turks, who are not ſlaves, live in a particular quarter near that of the Jews. The common proſtitutes alſo have a particular place aſſigned them, out of which they muſt not be ſeen, without leave from the commiſſary. The number of the rowers in the galleys, whether Turkiſh ſlaves, criminals, or volunteers, are about 2000. In the area before the darſena or inner harbour, is a fine ſtatue of Duke Ferdinand, with four Turkiſh ſlaves in bronze, chained to the pedeſtal. The ducal palace is one of the fineſt ſtructures in the town, and the ordinary reſidence of the governor. Leghorn is the ſee of a biſhop, and has a noble cathedral; but the other churches are not remarkable. E. Long. 11. 0. N. Lat. 43. 30.

LEGIO VII. GEMINA, (anc. geog), a town or ſtation of that legion in the Aſtures. Now *Leon*, capital of the province of that name in Spain. W. Long. 6. 5. Lat. 43—Another LEGIO, a town of Galilee; from which Jerome determines the diſtances of the places in Galilee; not a bare encampment, though the name might originally be owing to that circumſtance; it lay 15 miles to the weſt of Nazareth, between mount Tabor and the Mediterranean. Now thought to be *Legune*.

LEGION, in Roman antiquity, a body of foot which conſiſted of different numbers at different periods of time. The word comes from the Latin *legere*, to chooſe; becauſe, when the legions were raiſed, they made choice of ſuch of their youth as were moſt proper to bear arms.

In the time of Romulus the legion conſiſted of 3000 foot and 300 horſe; though, after the reception of the Sabines, it was augmented to 4000. In the war with Hannibal, it was raiſed to 5000, after this it ſunk to 4000 or 4500; this was the number in the time of Polybius. The number of legions kept in pay together, differed according to times and occaſions. During the conſular ſtate four legions were fitted up every year, and divided betwixt the two conſuls; yet we meet with the number of 16 or 18, as the ſituation of affairs required. Auguſtus maintained a ſtanding army of 23 or 25 legions; but this number in after times is ſeldom found. The different legions borrowed their names from the order in which they were raiſed, hence we read of *legio prima, ſecunda, tertia, &c.* but as there might be many *primæ, ſecundæ, tertiæ, &c.* they were ſurnamed from the emperors, as *Auguſta, Claudiana, Galbiana, Flavia, Ulpia, Trajana, Antoniana*, &c. or from the provinces which had been conquered by their means, as *Parthica, Scythica, Gallica, Arabica*, &c. or from the deities under whoſe protection the commanders had particularly placed themſelves, as *Minervia, Apollinaris*, &c. or from the region where they were quartered, as *Cretenſis, Cyrenaica, Britannica*, &c. or from particular accidents, as *adjutrix, martia, fulminatrix, rapax, victrix.*

Each legion was divided into 10 cohorts, each cohort into 10 companies, and each company into two centuries. The chief commander of the legion was called *legatus*, i. e. lieutenant.

The ſtandards borne by the legions were various; at firſt, the ſtandard was a wolf, in honour of Romulus's nurſe; afterwards an hog, which animal was uſually ſacrificed at the concluſion of a treaty, to indicate that war is undertaken with a view to peace; ſometimes a minotaur, to remind the general of his duty of ſecrecy, of which the labyrinth was an emblem, and conſequently the Minotaur; a horſe was alſo borne, alſo a boar; and Marius, we are told, was the firſt who changed all theſe for the eagle.

LEGISLATOR, a lawgiver, or perſon who eſtabliſhes the polity and laws of a ſtate. Such was Moſes, among the Jews; Lycurgus, among the Lacedemonians, &c. See MOSAIC *Law.*

The firſt laws among the Athenians ſeem to have been thoſe of Theſeus; for what we can find earlier than this period is involved in fable. After Theſeus came Draco the Archon, whoſe laws were ſaid, for their ſeverity, to have been written with blood: by his laws every offence was puniſhed with death; ſo that ſtealing an apple, and betraying their country, were treated as equal crimes. Theſe laws were afterwards repealed by Solon, except ſuch as related to murder: By way of diſtinction, Draco's laws were called Θεσμοι, and Solon's Νομοι. The laws of Solon were in a great meaſure ſuſpended during the uſurpation of Piſiſtratus; but, after the expulſion of his family, were revived with ſome additions by Cliſthenes. After this, the form of government was again changed, firſt by the four hundred, and afterwards by the thirty tyrants; but theſe ſtorms being over, the ancient laws were again reſtored in the Archonſhip of Euclides, and others eſtabliſhed at the inſtance of Diocles, Ariſtophon, and, laſt of all, of Demetrius the Phalerian. This is a ſhort ſketch of the hiſtory of the Athenian legiſlation, before that ſtate ſubmitted to the Roman yoke. But many laws were enacted by the ſuffrages of the people on particular exigencies; the decrees of the ſenate continued to have the force of laws no longer than a year. If a new law was to be propoſed to the aſſembly, it was neceſſary to write it upon a white tablet, and fix it up ſome days before the meeting, leſt their judgment ſhould be caught by ſurpriſe. The laws were carefully reviſed every year; and if any of them, from a change of circumſtances, were found unſuitable or prejudicial, they were repealed: This was called επιχειροτονια των νομων, becauſe the ſuffrages were given by holding up of hands. The firſt laws amongſt the Grecians were unwritten and compoſed in verſe, that the common people might with more eaſe commit them to memory. Solon penned his laws upon wooden tablets, called Αξονες; and ſome authors with great probability aſſert, that they were written in the manner called Βȣϛροφηδον, from left to right, and from right again to left, in the ſame manner as oxen walk the furrows in plowing thus,

ΕΚΔΙΟΣ ΑΡ
VΘΣΙΝUΧ

It was againſt the law for any perſon to eraſe a decree, and certain perſons called Γραμματεις, were appointed to prevent any corruption; whoſe buſineſs it was alſo to tranſcribe the old and enter the new ones.

At Rome the people were in a great meaſure their own legiſlators; though Solon may be ſaid, in ſome ſenſe, to have been their legiſlator, as the decemviri, who were created for the making of laws, borrowed a great number from thoſe of Solon. See Lex.

In Britain the legiſlative power is lodged in the king, lords, and commons aſſembled in parliament. See Law and Parliament.

LEGITIMATION, an act whereby illegitimate children are rendered legitimate. See Bastard.

LEGITIME, in Scots law, that ſhare of the moveable effects belonging to a huſband and wife, which upon the huſband's death falls to the children.

LEGUMEN, or Pod, in botany; a ſpecies of ſeed-veſſel which has two valves or external openings incloſing a number of ſeeds that are faſtened along one ſuture only. In this laſt circumſtance the ſeed-veſſel in queſtion differs from that termed by botaniſts *ſiliqua*, in which the incloſed ſeeds are faſtened alternately to both the ſutures or joinings of the pod.

The ſeed-veſſel of all the pea bloom or butterfly-ſhaped flowers, the *diadelphia* of Linnæus, is of this pod kind. Such, for inſtance, is the ſeed-veſſel of the pea, vetch, lupine, and broom.

LEGUMINOUS, an appellation given to all plants whoſe fruit is a legumen.

LEIBNITZ (Godfrey William-de), an eminent mathematician, and philoſopher, was born at Leipſic in Saxony in 1646. At the age of 15 years, he applied himſelf to mathematics at Leipſic and Jena; and in 1663, maintained a theſis *de Principiis Individuationis*. The year following he was admitted maſter of arts. He read with great attention the Greek philoſophers; and endeavoured to reconcile Plato with Ariſtotle, as he afterwards did Ariſtotle with Des Cartes. But the ſtudy of the law was his principal view; in which faculty he was admitted bachelor in 1665. The year following he would have taken the degree of doctor; but was refuſed it on pretence that he was too young, though in reality becauſe he had raiſed himſelf ſeveral enemies by rejecting the principles of Ariſtotle and the ſchoolmen. Upon this he went to Altorf, where he maintained a theſis *de Caſibus Perplexis*, with ſuch applauſe, that he had the degree of doctor conferred on him. He might have ſettled to great advantage at Paris; but as it would have been neceſſary to have embraced the Roman Catholic religion, he refuſed all offers. In 1673, he went to England; where he became acquainted with Mr Oldenburg, ſecretary of the royal ſociety, and Mr John Collins, fellow of that ſociety. In 1676, he returned to England, and thence went into Holland, in order to proceed to Hanover, where he propoſed to ſettle. Upon his arrival there, he applied himſelf to enrich the duke's library with the beſt books of all kinds. The duke dying in 1679, his ſucceſſor Erneſt Auguſtus, then biſhop of Oſnaburgh, ſhowed our author the ſame favour as his predeceſſor had done, and ordered him to write the hiſtory of the houſe of Brunſwick. He undertook it, and travelled over Germany and Italy in order to collect materials. The elector of Brandenburgh, afterwards king of Pruſſia, founded an academy at Berlin by his advice; and he was appointed perpetual preſident, though his affairs would not permit him to reſide conſtantly at Berlin. He projected an academy of the ſame kind at Dreſden; and this deſign would have been executed, if it had not been prevented by the confuſions in Poland. He was engaged likewiſe in a ſcheme for an univerſal language. His writings had long before made him famous over all Europe. Beſide the office of privy-counſellor of juſtice, which the elector of Hanover had given him, the emperor appointed him in 1711 aulic counſellor; and the czar made him privy counſellor of juſtice, with a penſion of 1000 ducats. He undertook at the ſame time the eſtabliſhment of an academy of ſcience at Vienna; but the plague prevented the execution of it. However, the emperor, as a mark of his favour, ſettled a penſion on him of 2000 florins, and promiſed him another of 4000 if he would come and reſide at Vienna. He would have complied with this offer, but he was prevented by death in 1716. His memory was ſo ſtrong, that in order to fix any thing in it, he had no more to do but to write it once; and he could even in his old age repeat Virgil exactly. He profeſſed the Lutheran religion, but never went to ſermon; and upon his death bed, his coachman, who was his favourite ſervant, deſiring him to ſend for a miniſter, he refuſed, ſaying, *he had no need of one*. Mr Locke and Mr Molyneux plainly ſeem to think that he was not ſo great a man as he had the reputation of being. Foreigners did for ſome time aſcribe to him the honour of an invention, of which he received the firſt hints from Sir Iſaac Newton's letters, who had diſcovered the method of fluxions in 1664 and 1665. But it would be tedious to give the reader a detail of the diſpute concerning the right to that invention.

LEIBNITZIAN philoſophy, or the philoſophy of Leibnitz, is a ſyſtem of philoſophy formed and publiſhed by its author in the laſt century, partly in emendation of the Carteſian, and partly in oppoſition to the Newtonian. The baſis of Mr Leibnitz's philoſophy was that of Des Cartes; for he retained the Carteſian ſubtile matter, with the univerſal plenitude and vortices; and repreſented the univerſe as a machine that ſhould proceed for ever by the laws of mechaniſm, in the moſt perfect ſtate, by an abſolute inviolable neceſſity, though in ſome things he differs from Des Cartes. After Sir Iſaac Newton's philoſophy was publiſhed in 1687, he printed an eſſay on the celeſtial motions, Act. Erud. 1689, where he admits of the circulation of the ether with Des Cartes, and of gravity with Sir Iſaac Newton; though he has not reconciled theſe principles, nor ſhown how gravity aroſe from the impulſe of this ether, nor how to account for the planetary revolutions, and the laws of the planetary motions in their reſpective orbits. That what he calls the *harmonical circulation*, is the angular velocity of any one planet, which decreaſes from the perihelium to the aphelium in the ſame proportion as its diſtance from the ſun increaſes; but this law does not apply to the motions of the different planets compared together; becauſe the velocities of the planets, at their mean diſtances, decreaſe in the ſame proportion as the ſquare roots of the numbers expreſſing thoſe diſtances. Beſides, his ſyſtem is defective, as it does not reconcile the circulation of the ether with the free motions of the comets in all directions, or with the obliquity of the planes of the planetary orbits; nor reſolve other objections to which the hypotheſis of the plenum and vortices is liable. Soon after the period juſt mentioned, the diſpute commenced concerning the invention of the method of fluxions, which led Mr Leibnitz to take a very decided part in oppoſition to the philoſophy of Sir Iſaac Newton. From the wiſdom and goodneſs of the Deity, and his principle of a ſufficient reaſon, he concluded that the univerſe was a perfect work, or the beſt that could poſſibly have been made; and that other things, which were incommodious and evil, were permitted as neceſſary conſequences of what was beſt: the material ſyſtem, conſidered as a perfect machine, can never fall into diſorder, or require to be ſet right; and to ſuppoſe that God interpoſes in it, is to leſſen the ſkill of the author, and the perfection of his work. He expreſſly charges an impious tendency on the philoſophy of Sir Iſaac Newton, becauſe he aſſerts, that the fabric of the univerſe and courſe of nature could not continue for ever in its preſent ſtate, but would require, in proceſs of time, to be re-eſtabliſhed or renewed by the hand of its Former. The perfection of the univerſe, by reaſon of which it is capable of continuing for ever by mechanical laws in its preſent ſtate, led Mr Leibnitz to diſtinguiſh between the quantity of motion and the force of bodies; and, whilſt he owns, in oppoſition to Des Cartes, that the former varies, to maintain that the quantity of force is for ever the ſame in the univerſe, and to meaſure the forces of bodies by the ſquares of their velocities.

This ſyſtem alſo requires the utter excluſion of atoms, or of any perfectly hard and inflexible bodies. The advocates of it alledge, that according to the law of continuity, as they call a law of nature invented for the ſake of the theory, all changes in nature are produced by inſenſible and infinitely ſmall degrees; ſo that no body can, in any caſe, paſs from motion to reſt, or from reſt to motion, without paſſing through all poſſible intermediate degrees of motion: whence they conclude, that atoms or perfectly hard bodies are impoſſible: becauſe if two of them ſhould meet with equal motions, in contrary directions, they would neceſſarily ſtop at once, in violation of the law of continuity.

Mr Leibnitz propoſes two principles as the foundation of all our knowledge; the firſt, that it is impoſſible for a thing to be and not to be at the ſame time, which, he ſays, is the foundation of ſpeculative truth: the other is, that nothing is without a ſufficient reaſon why it ſhould be ſo rather than otherwiſe; and by this principle, according to him, we make a tranſition from abſtracted truths to natural philoſophy. Hence he concludes, that the mind is naturally determined, in its volitions and elections, by the greateſt apparent good, and that it is impoſſible to make a choice between things perfectly like, which he calls *indiſcernibles*; from whence he infers, that two things perfectly like could not have been produced even by the Deity: and he rejects a vacuum, partly becauſe the parts of it muſt be ſuppoſed perfectly like to each other. For the ſame reaſon he alſo rejects atoms, and all ſimilar particles of matter, to each of which, though diviſible *in infinitum*, he aſcribes a *monad* (Act. Lipſiæ 1698, p. 435.) or active kind of principle, endued, as he ſays, with perception and appetite. The eſſence of ſubſtance he places in action or activity, or, as he expreſſes it, in ſomething that is between acting and the faculty of acting. He affirms abſolute reſt to be impoſſible, and holds motion, or a ſort of *niſus*, to be eſſential to all material ſubſtances. Each monad he deſcribes as repreſentative of the whole univerſe from its point of ſight; and after all, in one of his letters he tells us, that matter is not a ſubſtance, but a *ſubſtantiatum*, or *phenomené bien fonde*. He frequently urges the compariſon between the effects of oppoſite motives on the mind, and of weights placed in the ſcales of a balance, or of powers acting upon the ſame body with contrary directions. His learned antagoniſt Dr Clarke denies that there is a ſimilitude between a balance moved by weights, and a mind acting upon the view of certain motives; becauſe the one is entirely paſſive, and the other not only is acted upon, but acts alſo. The mind, he owns, is purely paſſive in receiving the impreſſion of the motive, which is only a perception, and is not to be confounded with the power of acting after, or in conſequence of, that perception. The difference between a man and a machine does not conſiſt only in ſenſation and intelligence, but in this power of acting alſo. The balance, for want of this power, cannot move at all when the weights are equal; but a free agent, he ſays, when there appear two perfectly alike reaſonable ways of acting, has ſtill within itſelf a power of chooſing; and it may have ſtrong and very good reaſons not to forbear.

The tranſlator of Moſheim's Eccleſiaſtical Hiſtory obſerves, that the progreſs of Arminianiſm has declined in Germany and ſeveral parts of Switzerland, in conſequence of the influence of the Leibnitzian and Wolſian philoſophy Leibnitz and Wolf, by attacking that liberty of indifference, which is ſuppoſed to imply the power of acting not only without, but againſt, motives, ſtruck, he ſays, at the very foundation of the Arminian ſyſtem. He adds, that the greateſt poſſible perfection of the univerſe, conſidered as the ultimate end of creating goodneſs, removes from the doctrine of predeſtination thoſe arbitrary procedures and narrow views with which the Calviniſts are ſuppoſed to have loaded it, and gives it a new, a more pleaſing, and a more philoſophical aſpect. As the Leibnitzians laid down this great end as the ſupreme object of God's univerſal dominion, and the hope to which all his diſpenſations are directed; ſo they concluded, that if this end was propoſed, it muſt be accompliſhed. Hence the doctrine of neceſſity, to fulfil the purpoſes of a predeſtination founded in wiſdom and goodneſs; a neceſſity, phyſical and mechanical, in the motions of material and inanimate things, but a neceſſity moral and ſpiritual in the voluntary determinations of intelligent beings, in conſequence of propellent motives, which produce their effects with certainty, though theſe effects be contingent, and by no means the offspring of an abſolute and eſſentially immutable fatality. Theſe principles, ſays the ſame writer, are evidently applicable to the main doctrines of Calviniſm; by them predeſtination is confirmed, though modified with reſpect to its reaſons and its end; by them irreſiſtable grace (irreſiſtable in a moral ſenſe) is maintained upon the hypotheſis of propellent motives and a moral neceſſity: the perſeverance of the ſaints is alſo explicable upon the ſame ſyſtem, by a ſeries of moral cauſes producing a ſeries of moral effects.

LEICESTER, the capital of a county of the ſame name in England, upon the river Loire, now called *Soare*. From its ſituation on the Foſſe-way, and the many coins and antiquities diſcovered here, it ſeems probable that it was a place of ſome note in the time of the Romans. In the time of the Saxons it was a biſhop's ſee, and afterwards ſo prepared and fortified by Edelfiida, that it became, according to Matthew Paris, a moſt wealthy place, having 32 pariſh-churches; but in Henry the Second's reign it was in a manner quite ruined, for joining in rebellion againſt him with Robert earl of Leiceſter. In the reign of Edward III. however, it began to recover by the favour of his ſon Henry Plantagenet, duke and earl of Lancaſter, who founded and endowed a collegiate church and hoſpital here. It is a borough and corporation, governed by a mayor, recorder, ſteward, bailiff, 24 aldermen, 48 common-council men, a ſolicitor, a town-clerk, and two chamberlains. It had its firſt charter from king John. The freemen are exempt from paying toll in all the fairs and markets of England. It has three hoſpitals, that mentioned above, built by Henry Plantagenet duke of Lancaſter, and capable of ſupporting 100 aged people decently; another erected and endowed in the reign of Henry VIII. for 12 poor lazars; and another for ſix poor widows. The caſtle was a prodigious large building, where the duke of Lancaſter kept his court. The hall and kitchen ſtill remain entire, of which the former is very ſpacious and lofty; and in the tower over one of the gate-ways is kept the Magazine for the county militia. There was a famous monaſtery here, anciently called, from its ſituation in the meadows, *St Mary de Pratis* or *Prez*. In theſe meadows is now the courſe for the horſe-race. It is ſaid that Richard III. who was killed at the battle of Boſworth, lies interred in St Margaret's church. The chief buſineſs of Leiceſter is the ſtocking trade, which hath produced in general to the amount of 60,000l. a-year. In a parliament held here in the reign of Henry V. the firſt law for the burning of heretics was made, levelled againſt the followers of Wickliffe, who was rector of Lutterworth in this county, and where his pulpit is ſaid ſtill to remain. The town ſuffered greatly in the civil wars, by two ſieges upon the back of one another. It has given the title of *earl* to ſeveral noble families. The preſent earl was created in 1784, and is the marquis of Townſhend's ſon. Its market on Saturday is one of the greateſt in England for proviſions, eſpecially for corn and cattle; and it has four fairs in the year.

LEICESTERSHIRE, an inland county of England, in form almoſt circular. It has Nottinghamſhire and Derbyſhire to the north; Rutlandſhire and Lincolnſhire on the eaſt; Warwickſhire on the weſt, from which it is parted by the Roman military way called *Watling-ſtreet;* and by Northamptonſhire on the ſouth; and is about 170 miles in circumference. As it lies at a great diſtance from the ſea, and is free from bogs and marſhes, the air is ſweet and wholeſome. It is a champaign country in general, and abundantly fertile in corn and graſs, being watered by ſeveral rivers, as the Soure, or Sare, which paſſes through the middle of it, and abounds in excellent ſalmon and other fiſh; the Wreke; Trent, Eye, Senſe, Auker, and Aven. Theſe rivers being moſtly navigable, greatly facilitate the trade of the county. In ſome parts there is a great ſcarcity of fuel, both wood and coal; but in the more hilly parts there is plenty of both, together with great flocks of ſheep. Beſides wheat, barley, oats, and peaſe, it produces the beſt beans in England. They grow ſo tall and luxuriant in ſome places, particularly about Barton in the Beans, that they look, towards the harveſt-time, like a foreſt; and the inhabitants eat them not only when they are green, as in other places, but all the year round; for which reaſon their neighbours nickname them *bean-bellies*. They have plenty of very good wool, of which they not only make great quantities of ſtockings, but ſend a great quantity unmanufactured into other parts of England. They make great profit of their corn and pulſe; and likewiſe breed great numbers of coach and dray horſes, moſt of the gentlemen being graziers; and it is not uncommom to rent graſs-farms from 500l. to 2000l. a-year. It is in the midland circuit, and dioceſe of Lincoln; and ſends four members to parliament, two for Leiceſter, and two for the county.

LEIGH (Sir Edward), a very learned Engliſhman, was born at Shawell in Leiceſterſhire, and educated at Magdalen Hall, Oxford. He was a member of the long parliament, and one of the members of the houſe of commons who were appointed to ſit in the aſſembly of divines. He was afterwards colonel of a regiment for the parliament; but in 1648 was numbered among the Preſbyterians who were turned out, and in December he was impriſoned. From this period to the Reſtoration he employed himſelf in writing a conſiderable number of learned and valuable books, which ſhowed profound learning, a knowledge of the languages, and much critical ſagacity; and of which a liſt is given by Anthony Wood. Sir Edward died at his houſe called Ruſhal Hall, in Staffordſhire, June 2. 1671: and was buried in the chancel of Ruſhall church.

LEIGHLIN, a town of Ireland, ſituated in the county of Carlow, and province of Leinſter; about 43 miles from Dublin, near the river Barrow. It is a borough, and returns two members to parliament; patronage in the biſhop of the dioceſe, this being a biſhopric united to Ferns. At the eaſt end of the church of Old-Leighlin is a famous well covered with great aſh trees, and dedicated to St Laſarian. This place was formerly a city, though now a very mean village, and the cathedral has been kept in good repair. It was a *ſole* biſhopric, founded in 632, and joined to

Ferns in 1600. It is reported, that Gurmundus a Daniſh prince was buried in this church. The laſt biſhop of Leighlin before its union with Ferns, was the Right Rev. Robert Grave, who coming by ſea to be inſtalled, ſuffered ſhipwreck in the harbour of Dublin, and periſhed in the waves. This cathedral was burnt to the ground, it is ſaid, by lightning; and rebuilt, A. D. 1232, then dedicated to St Laſarian or Laxarinus, before-mentioned; ſince the ſees were joined, it is made uſe of as a pariſh-church. Leighlin-bridge is ſituated about two miles from this village; it was deſtroyed by the Iriſh in 1577. Here are the remains of a caſtle and of an old abbey. This is a poſt town, and has fairs in May, September, and October.

LEIGHTON (Robert), archbiſhop of Glaſgow. During Cromwell's uſurpation, he was miniſter of a church near Edinburgh, and diſtinguiſhed himſelf by his charity, and his averſion to religious and political diſputes. The miniſters were then called over yearly in the ſynod, and were commonly aſked, Whether they had preached to the times? "For God's ſake (anſwered Leighton), when all my brethren preach to the times, ſuffer me to preach about eternity." His moderation, however, giving offence, he retired to a life of privacy. But ſoon after, he was called by the unanimous voice of the magiſtrates, to preſide over the college of Edinburgh; where, during ten years, he diſplayed all the talents of a prudent, wiſe, and prudential governor. Soon after the Reſtoration, when the ill-judged affair of introducing epiſcopacy into Scotland was reſolved on, Leighton was conſecrated biſhop of Dunblane, and immediately gave an inſtance of his moderation: for when Sharpe and the other biſhops intended to enter Edinburgh in a pompous manner, Leighton remonſtrated againſt it: but finding that what he ſaid had no weight, he left them, and went to Edinburgh alone. Leighton, in his own dioceſe, ſet ſuch a remarkable example of moderation, that he was revered even by the moſt rigid of the oppoſite party. He went about, preaching without any appearance of pomp; gave all he had to the poor; and removed none of the miniſters, however exceptionable he might think their political principles. But finding that none of the other biſhop's would be induced to join, as he thought, properly in the work, he went to the king, and reſigned his biſhopric, telling him he would not have a hand in ſuch oppreſſive meaſures. Soon after, the king and council, partly induced by this good biſhop's remonſtrances, and partly by their own obſervations, reſolved to carry on the cauſe of epiſcopacy in Scotland on a different plan; and with this view, Leighton was perſuaded to accept of the archbiſhopric of Glaſgow, on which he made one effort more; but finding it not in his power to ſtem the violence of the times, he reſigned his archbiſhopric, and retired into Suſſex, where he devoted himſelf to acts of piety. He died in the year 1684. He was of a moſt amiable diſpoſition, ſtrict in his life, polite, cheerful, engaging in his manners, and profoundly learned. He left many ſermons and uſeful tracts, which are greatly eſteemed.

LEINSTER, the eaſtern province of Ireland, bounded by Ulſter on the north; St George's, or the Iriſh Channel, on the eaſt and ſouth; and by the provinces of Connaught and Munſter on the weſt. The capital city of this province and of the kingdom is Dublin. It contains 12 counties, viz. Carlow, Dublin, Kildare, Kilkenny, King's-county, Longford, Louth, Meath, Queen's-county, Weſt-meath, Wexford, and Wicklow. It is the moſt level and beſt cultivated province in the kingdom; containing 2,642,258 Iriſh plantation acres, 858 pariſhes, 99 baronies, and 53 boroughs; it is about 124 miles long and 74 broad, and extends from 51° 45′ to 55° 45′ north latitude. Dermod king of Leinſter marrying his daughter Eva to Strongbow earl of Pembroke, on his deceaſe made him his univerſal heir; whereby the Earl inherited the province of Leinſter, and was afterwards enfeoffed of it by Hen. II. He died in 1176, and left an only daughter Iſabel, eſpouſed to William Marſhal earl of Pembroke; by her he had five ſons, who ſucceeded to his great eſtates in Leinſter. This province gives title of Duke to the ancient and noble family of Fitzgerald. In the early ages, this diſtrict was almoſt one continued foreſt, and was principally the ſeat of the Kinſelaghs.

LEIPSIC, a large, ſtrong, and populous town of Miſnia in Germany, with a caſtle, and a famous univerſity. It is neat, and regularly built, and the ſtreets are lighted in the night; it carries on a great trade, and has a right to ſtop and ſell the merchandizes deſigned to paſs through it, and the country for 75 miles round has the ſame privilege. There are three great fairs every year; at the beginning of the year, Eaſter and Michaelmas, which laſt 15 days each. There are ſix handſome colleges belonging to the univerſity, beſides the private colleges. The town-houſe makes an indifferent appearance, but the exchange is a fine ſtructure. The town was taken by the king of Pruſſia in the late war, but given up by the peace in 1763. It is ſeated in a plain between the rivers Saale and Muld near the confluence of the Playſſe, Elſter, and the Barde. E. Long. 12. 55. N. Lat. 51. 19.

LEITH, (anciently called *Inverleith*), the port of Edinburgh, is ſeated on the banks of the Forth, about two miles from the capital. It is built on both ſides of the harbour; by which it is divided into two parts, called *North* and *South Leith*. The communication between theſe was by a ſtone-bridge of three arches founded by Robert Ballentyne abbot of Holyrood-houſe in 1493, but lately pulled down. The harbour is formed by the conflux of the rivulet called the *Water of Leith* with the Frith of Forth. The depth of water, at neap-tides, is about nine feet; but in high ſpring-tides, it is about 16 feet. In the beginning of the preſent century, the town-council of Edindingh improved the harbour at an enormous expence, by extending a ſtone-pier a conſiderable way into the ſea. In 1777, they erected an additional ſtone quay towards its weſt ſide. Upwards of 100 ſhips could then lie conveniently in this port; but it can now admit of a much greater number, in conſequence of having lately undergone great improvements. In order to enlarge it, the old bridge has been pulled down, and an elegant draw-bridge erected a little to the eaſtward of the former ſite. It is accommodated with wet and dry docks, and other conveniences for ſhip-building, which is there carried on to ſome extent, as veſſels come to Leith to be repaired from all parts of Scotland. A new baſon and docks are propoſed to be added; which, when completed, will render this a very capacious, as well as a moſt ſafe and convenient, ſtation for trading veſſels. And the road of Leith affords good anchorage for ſhips of the greateſt ſize.

The harbour of Leith was granted to the community of Edinburgh by king Robert in 1329; but the banks of the harbour belonged to Logan of Reſtalrig, a turbulent and ambitious baron, from whom the citizens were under the neceſſity of purchaſing the bank or waſte piece of ground between the houſes and the rivulet abovementioned, for the purpoſes of wharfs, as well as for erecting ſhops and granaries, neither of which they could do before. As the ſituation of Leith, however, is much more convenient for trade than that of Edinburgh, which is two miles diſtant from the harbour, the inhabitants of the metropolis have fallen upon various methods of reſtraining the trade of Leith. They firſt purchaſed, from Logan of Reſtalrig, an excluſive privilege of carrying on every ſpecies of traffic in the town of Leith, and of keeping warehouſes and inns for the entertainment of ſtrangers in that place; and in 1483, the town-council prohibited, under ſevere penalties, the citizens of Edinburgh from taking into partnerſhip any inhabitant of Leith. To free themſelves from this oppreſſion, the people of Leith purchaſed the ſuperiority of their town from Logan of Reſtalrig for 3000 l. Scots, and it was erected into a burgh of barony by the queen-regent, Mary of Lorraine, who promiſed to erect it into a royal borough. She died, however, before this was accompliſhed; and upon her death, Francis and Mary, in violation of the private rights of the people of Leith, reſold the ſuperiority to the town of Edinburgh, to whom it has ſince been confirmed by grants from ſucceſſive ſovereigns.

On the breaking out of the diſturbances at the Reformation, the queen-regent cauſed the whole town to be fortified, that the French troops might have a more ready inlet into the kingdom. It was accordingly ſurrounded with a wall, having eight baſtions: but this wall went no farther than the ſtreet now called *Bernard's nook*, becauſe at that time the ſea came up the length of that ſtreet; and even as late as 1623, a houſe ſituated exactly where the weight-houſe is at preſent, is deſcribed as bounded on the eaſt by the "ſand of the ſea-ſhore." All that ſpace, therefore on which the row of houſes neareſt the harbour of Leith now ſtands, has been gained ſince that time from the ſea.

In the time of Charles I. a fortification was erected at Leith by the Covenanters. Cromwell built a ſtrong fort at the place ſtill called the *citadel* in North Leith; but it was pulled down on the reſtoration of Charles II. by order of government. A gate with portcullices are the preſent remains of that fortification.—A palace alſo appears to have formerly ſtood here, ſituated at the north-eaſt boundaries of the former town, on the ſpot where the preſent weight-houſe ſtands. It was deſtroyed by the Engliſh in the time of Henry VIII. The remains of this building, called the *king's work*, with a garden, and a piece of waſte land that ſurrounded it, was erected into a barony by James VI. and beſtowed upon Bernard Lindſay of Lochill, groom of the chamber to that prince. He is ſaid to have fully repaired, and appropriated it to the recreations of the court; but it ſoon fell from its dignity, and became ſubſervient to much more ignoble purpoſes. The tennis court was converted into a weigh-houſe; and the ſtreet which bounds it ſtill bears the name of the founder, from whom it is called *Bernard's nook*.

As Leith lay within the pariſh of Reſtalrig, the church of Reſtalrig was of conſequence the place of worſhip for the inhabitants of Leith; but in 1650 the Aſſembly ordered that church to be pulled down as a monument of idolatry, ſo that Leith wanted a pariſh-church for upwards of 50 years. During that period they reſorted for worſhip to a large and beautiful chapel already built, and dedicated to St Mary, which is now called *South Leith church*: and in 1609 this chapel was by authority of parliament declared to be the pariſh church of the diſtrict; ſo that Reſtalrig is now in the pariſh of South-Leith, as the latter was formerly in that of Reſtalrig. In 1772, a Chapel of eaſe was erected by the inhabitants, as the pariſh-church was inſufficient to contain the number of hearers. There are alſo an epiſcopal and ſeveral diſſenting congregations in Leith. North-Leith is a pariſh by itſelf, and the church is ſituated at what was the north end of the old bridge.

Though a very great trade is carried on between Leith and many foreign ports, yet the articles of export and import fluctuate ſo much, that it would be uſeleſs to enter into any details either as to ſpecies or quantity. In general, the imports from France, Spain and Portugal, are wine, brandy, and fruits; from the Weſt Indies and America, rice indigo, rum, ſugar, and logwood. But the principal foreign trade of Leith is by the eaſtern ſeas, for the navigation of which it is moſt happily ſituated. To Germany, Holland, and the Baltic, it exports lead, glaſs-ware, linen and woollen ſtuffs, and a variety of other goods; and from thence it imports immenſe quantities of timber, oak-bark, hides linen rags, pearl-aſhes, flax, hemp, tar, and many other articles. The Baltic trade, however, is at preſent rather on the decline, the great extent to which it was carried on for ſome years paſt having been chiefly owing to the vaſt increaſe of new buildings in Edinburgh and its environs. The coaſting trade is at preſent the principal branch that employs the ſhipping at Leith, including thoſe which belong to other ports on the Forth, which are ſaid to make about one-fourth of the tonage of the Leith veſſels. The ſhips employed in the London trade are in general of a large ſize, elegantly conſtructed, and furniſhed with excellent accommodations for paſſengers. They make at an average four voyages up and down in the year. The largeſt ſhips in this port, however, are thoſe employed in the Greenland fiſhery.

The ſhipping at Leith renders the demand for ropes, ſail cloth, and cordage, very conſiderable. There were lately three different companies, who carried on theſe manufactures, beſides ſome private perſons who dealt leſs conſiderably. The firſt of thoſe companies was eſtabliſhed in the beginning of the preſent century; and 20 years ago made, it is ſaid, larger dividends among the partners than any trading or manufacturing company in the nation. There are only three companies at preſent, but a number of private manufacturers.

In the middle of the laſt century, a manufactory of green glaſs was eſtabliſhed at the citadel of Leith. Chopin bottles were ſold at 4s. 6d. per dozen, and other bottles in proportion. Soon afterwards this article was manufactured alſo in North Leith; and, in 1707, chopin bottles were ſold at 2s. 6d. per dozen, and ſo proportionably. That houſe being burnt down in 1746, a new houſe was built the following year on South-Leith ſands, and an additional one in 1764. The annual expence of both houſes was between 800l. and 900l. Another was afterwards added, and three more have lately been erected. They manufacture not only bottles, but alſo window-glaſs and cryſtal-ware of all ſorts.

Manufactures of ſoft ſoap and candles were erected by St Clair of Roſlin and ſome merchants; the former in 1750, and the latter in 1770: a manufacture of hard ſoap was alſo eſtabliſhed in 1770. Beſides theſe, there are a conſiderable manufacture for making cards with which wool is combed, a great carpet factory, and ſeveral iron-forges. There was alſo a ſugar-houſe; but it has been given up, as has likewiſe Mr St Clair's ſoap-work.

The inhabitants of Leith were divided into four claſſes; and theſe erected into corporations by the queen dowager, Mary of Lorraine. Theſe were mariners, maltmen, traders, and traffickers. The firſt of theſe conſiſted of ſhip-maſters and ſailors; the ſecond, of malt-makers and brewers; the third, of coopers, bakers, ſmiths, wrights, &c.; and the fourth of merchants and ſhop-keepers. Of theſe corporations the mariners are the moſt conſiderable. They obtained from Mary of Lorraine a gift, afterwards ratified by William and Mary, of one penny duty on the ton of goods in the harbour of Leith, for the ſupport of their poor. This duty, which not many years ago did not amount to 40 l. a-year, now riſes from 70l. to 120l. as trade flouriſhes. For the ſame purpoſe the ſhip-maſters alſo pay 6d. a-pound out of their own wages annually; and the like ſum they give upon the wages of their ſailors. From theſe and other donations, this corporation is enabled to pay from 600l. to 700l. a-year to their poor. Oppoſite to South-Leith church there is a large houſe belonging to them, called the *Trinity-hoſpital*, becauſe originally conſecrated to the Holy Trinity. In this houſe ſome of their poor uſed formerly to be mantained, but now they are all out-penſioners. Beſides other apartments, this hoſpital contains a large handſome hall for the meetings of the corporation. Adjoining to the ſchool-houſe there is another hoſpital, called *king James's hoſpital*; and bears upon its front the cypher and arms of that prince. Here ſome poor women belonging to the other corporations are maintained.

As the town of Leith was very ill ſupplied with water, and the ſtreets were neither properly cleaned nor lighted, an act for remedying theſe defects was paſſed in the year 1771, appointing certain perſons from among the magiſtrates of Edinburgh, lords of ſeſſion, inhabitants of Edinburgh and Leith, and members of the corporations of Leith, *commiſſioners of police*; empowering them to put this act in execution; and, for that purpoſe, to levy a ſum not exceeding 6d. in the pound upon the valued rent of Leith. The great change which has ſince taken place on the ſtreets of Leith ſhows the good effect of this act, and that it has both been judiciouſly prepared, and attentively executed.

Leith is computed to contain about thirteen thouſand inhabitants. The government of the town is veſted in a magiſtrate ſent from Edinburgh, having admirals's power; and in two reſiding bailies, elected by the town council.

LEITRIM, a county of Ireland, ſituated in the province of Connaught, is bounded on the north by the bay of Donnegal and part of Fermanagh, on the ſouth and weſt by Sligo and Roſcommon, and on the eaſt by Fermanagh and Cavan. It is a fruitful county; and, though mountainous, produces great herds of black cattle; but has few places of note. It contains 206,830 Iriſh plantation acres, 21 pariſhes, 5 baronies, and 2 boroughs; and ſends ſix members to parliament; it is about 42 miles long, and 17 broad.

LEITRIM, the ſhire town of the county of that name, is pleaſantly ſituated on the banks of the river Shannon, about 80 miles from Dublin; and appears to have been formerly a place of ſome note. St Mac Liegus, ſon of Cernac, was biſhop here: and his feſtival is obſerved on the 8th of February. It has ſix fairs in the year.

LEIXLIP, a poſt and fair town of Ireland pleaſantly ſituated in the county of Kildare and province of Leinſter, about 8 miles from Dublin. Near it are the ruins of the church and caſtle of Confy. The caſtle of Leixlip is beautifully ſeated on the banks of the river Liffey; it is a fine edifice with large and pleaſant gardens, at on ſide of which is a fine waterfall called the *Salmon leap*, there being plenty of that ſpecies of fiſh hereabouts. A mile from this is Caſtle town, the magnificent ſeat of Mr Conolly. There are three fairs here in the year.

LELAND (John), the great Engliſh antiquary, was born in London about the year 1507. Having loſt his parents when a child, he had the good fortune to find a friend and patron in one Mr Thomas Miles, who placed him in St Paul's ſchool, of which the grammarian Lilye was maſter. From that ſchool he was ſent to Chriſt's college, Cambridge; whence, after ſome years reſidence, he removed to All-Souls, Oxford. From Oxford he went to Paris, chiefly with a deſign to ſtudy the Greek language, which at that time was but little underſtood in England. On his return to England he took orders, and was ſoon appointed chaplain to king Henry VIII. who alſo gave him the rectory of Poppelng, in the marſhes of Calais, appointed him his librarian, and in 1533 granted to him, by commiſſion under the great ſeal, the office of king's antiquary; an office never borne by any other perſon before or ſince. By this commiſſion he was empowered to ſearch for ancient writings in all the libraries of colleges, abbeys, priories, &c. in his majeſty's dominions. We are told by his laſt biographer, that he renounced popery ſoon after his return to England; but he quotes no authority. Be this as it may, in 1536, he obtained a diſpenſation to keep a curate at Poppeling, and ſet out on his journey in ſearch of antiquities. In this employment he ſpent ſix years, during which time he viſited every part of England where monuments of antiquity were to be expected. After his return, in the year 1542, he was preſented by the king to the rich rectory of Haſeley in Oxfordſhire; and in the following year he gave him a prebend of King's College, now Chriſt's church, in Oxford, beſides that of Eaſt and Weſt Knowle, in the cathedral of Saliſbury. Being thus amply provided for, he retired to a houſe of his own in the pariſh of St Michael le Querne in London, where he ſpent ſix years more in digeſting the materials which he had collected. King Henry VIII. died in 1547; and in a ſhort time after, poor Leland loſt his ſenſes. He was at firſt ſeized with a deep melancholy, which was ſucceeded by a total deprivation of his reaſon. In this dreadful ſtate he continued till the beginning of the year 1552, when he was happily releaſed by death. He was buried in the church of St Michael le Querne, which was deſtroyed by the fire in 1666. Mr Leland is remembered as a man of great learning, an univerſal linguiſt, an excellent Latin poet, and a moſt indefatigable and ſkilful antiquary. On his death, king Edward VI. gave all his papers to Sir John Checke, his tutor and Latin ſecretary of ſtate. The king dying, and Sir John being obliged to leave the kingdom, he gave four folio volumes of Leland's collections to Humphrey Purefoy, Eſq; which, in 1612, were by his ſon given to William Burton, author of the hiſtory of Leiceſterſhire. This gentleman alſo became poſſeſſed of the Itinerary in 8 vols folio, which, in 1632, he depoſited in the Bodleian library. Many other of Leland's manuſcripts, after the death of Sir John Checke, fell into the hands of lord Paget, Sir William Cecil, and others, which at laſt fortunately came into the poſſeſſion of Sir John Cotton. Theſe manuſcripts were of great uſe to all our ſubſequent antiquarians, particularly Cambden, Sir William Dugdale, Stowe, Lambard, Dr Batteley, Ant. Wood, &c. His Itinerary throughout moſt parts of England and Wales, was publiſhed by Mr Hearne, 9 vols 8vo. in 1710 11; as was alſo his *Collectanea de rebus Britannicis*, 6 vols 8vo, in 1715.

Leland (John), well known by his writings in defence of Chriſtianity, was born at Wigan in Lancaſhire in 1691, of eminently pious and virtuous parents. They took the earlieſt care to ſeaſon his mind with proper inſtructions; but, in his ſixth year, the ſmall-pox deprived him of his underſtanding and memory, and expunged all his former ideas. He continued in this deplorable ſtate near a twelvemonth, when his faculties ſeemed to ſpring up anew; and though he did not retain the leaſt traces of any impreſſions made on him before the diſtemper, yet he now diſcovered a quick apprehenſion and ſtrong memory. In a few years after, his parents ſettled in Dublin, which ſituation gave him an eaſy introduction to learning and the ſciences. When he was properly qualified by years and ſtudy, he was called to be paſtor to a congregation of Proteſtant diſſenters in that city. He was an able and acceptable preacher, but his labours were not confined to the pulpit. The many attacks made on Chriſtianity, and by ſome writers of no contemptible abilities, engaged him to conſider the ſubject with the exacteſt care, and the moſt faithful examination. Upon the moſt deliberate inquiry, the truth and divine original, as well as the excellence and importance of Chriſtianity, appearing to him with great luſtre, he publiſhed anſwers to ſeveral authors who ſucceſſively appeared in that cauſe. He was indeed a maſter in this controverſy; and his hiſtory of it, ſtyled “A View of the Deiſtical Writers that have appeared in England in the laſt and preſent Century, &c.” is very greatly and deſervedly eſteemed. In the decline of life he publiſhed another laborious work, intitled, “The Advantage and Neceſſity of the Chriſtian Revelation, ſhown from the State of Religion in the ancient Heathen World, eſpecially with reſpect to the Knowledge and Worſhip of the One true God; a Rule of moral Duty, and a State of future Rewards and Puniſhments; to which is prefixed, a long and preliminary Diſcourſe on Natural and Revealed Religion,” 2 vols 4to. This noble and extenſive ſubject, the ſeveral parts of which have been ſlightly and occaſionally handled by other writers, Leland has treated at large with the greateſt care, accuracy, and candour. And, in his “View of the Deiſtical Writers,” his cool and diſpaſſionate manner of treating their arguments, and his ſolid confutation of them, have contributed more to depreſs the cauſe of atheiſm and infidelity, than the angry zeal of warm diſputants. But not only his learning and abilities, but alſo his amiable temper, great modeſty, and exemplary life, recommended his memory to general eſteem and affection. He died in 1766.

LELEGEIS, the ancient name of Miletus, from the Leleges, the firſt inhabitants of it.

LELEGES, anciently a people of Aſia, of Greek original; the name denoting “a collection of people:” they firſt occupied the iſlands; then paſſing over to the continent, they ſettled partly in Myſia on the Sinus Adramyttenus, and partly in that part of Ionia next Caria.—There were Leleges alſo of Laconia. Theſe went to the Trojan war with Altes their king. Achilles plundered their country, and obliged them to retire to the neighbourhood of Halicarnaſſus, where they fixed their habitation.—The inhabitants of Laconia and of Megara alſo bore this name for ſome time, from Lelex one of their kings.

LELEX, an Egyptian who came with a colony to Megara, where he reigned about 200 years before the Trojan war. His ſubjects were called from him *Leleges*.—Alſo the name of a Greek who was the firſt king of Laconia in Peloponneſus. His ſubjects were alſo called *Leleges*, and the country where he reigned *Lelegia*.

LELY (Sir Peter), an excellent painter, born in Weſtphalia in the year 1617. He was placed as a diſciple with Peter Grebber at Haerlem; and in 1641 was induced, by the encouragement Charles I. gave to the fine arts, to come to England. He became ſtate-painter to Charles II. who knighted him; and being as complete a gentleman as a painter, that king took pleaſure in converſing with him. He practiſed portrait painting, and ſucceeded ſo well that he was preferred before all his cotemporaries. Hence he became perpetually involved in buſineſs; ſo that he was thereby prevented from going into Italy to finiſh the courſe of his ſtudies, which in his younger days he was very deſirous of: however, he made himſelf amends, by getting the beſt drawings, prints, and paintings, of the moſt celebrated Italian maſters. Among theſe were the better part of the Arundel Collection, which he had from that family, many whereof were ſold after his death at prodigious rates, bearing upon them his uſual mark of P. L.—The advantage he reaped from this collection, the beſt choſen of any one of his time, appears from that admirable ſtyle which he acquired by daily converſing with the works of thoſe great maſters. In his correct draught and beautiful colouring, but more eſpecially in the graceful airs of his heads, and the pleaſing variety of his poſtures, together with the gentle and looofe management of the draperies, he excelled moſt of his predeceſſors. Yet the critics remark, that he preſerved in almoſt all his female faces a drowſy ſweetneſs of the eyes peculiar to himſelf; for which he is reckoned a manneriſt. The hands of his portraits are remarkably fine and elegantly turned; and he frequently added landſcapes in the back-grounds of his pictures, in a ſtyle peculiar to himſelf, and better ſuited to his ſubject than moſt men could do. He excelled likewiſe in crayon-painting. He was familiar with, and much reſpected by perſons of the greateſt eminence in the kingdom. He became enamoured of a beautiful Engliſh lady, to whom he was ſome time after married; and he purchaſed an eſtate at Kew in the county of Surrey, to which he often retired in the latter part of his life. He died of an apoplexy in 1680 at London; and was buried at Covent-Garden church, where there is a marble monument erected to his memory, with his buſt, carved by Mr Gibbons, and a Latin epitaph, written, as is ſaid, by Mr Flatman.

LEMBERG, a town of Poland, capital of Red Ruſſia, ſeated in the palatinate of Lemburg, on the river Pelteu. It is pretty well fortified, and defended by two citadels, one of which is ſeated on an eminence without the town. The ſquare, the churches, and the public buildings, are magnificent; and it is a large and rich trading place. It has a Roman catholic archbiſhop, and an Armenian as well as a Ruſſian biſhop; but the Proteſtants are not tolerated. This city was reduced to the laſt extremity by the rebel Coſſacs and Tartars, and was forced to redeem itſelf with a large ſum of money. In 1672, it was beſieged in vain by the Turks; but in 1704, was taken by ſtorm by Char. XII of Sweden. E. Long. 24. 46. N. Lat. 49. 51.

LEMERY (Nicholas), a celebrated chemiſt, born at Rouen in Normandy in 1645. After having made the tour of France, he, in 1672, commenced an acquaintance with M. Martyn apothecary to Monſieur the Prince; and performed ſeveral courſes of chemiſtry in the laboratory of this chemiſt at the Hotel de Conde; which brought him to the knowledge and eſteem of the prince. He provided himſelf at length with a laboratory of his own, and might have been made a doctor of phyſic: but he choſe to continue an apothecary, from his attachment to chemiſtry, in which he opened public lectures; and his confluence of ſcholars was ſo great as ſcarcely to allow him room to perform his operations. The true principles of chemiſtry in his time were but ill underſtood; Lemery was the firſt who aboliſhed the ſenſeleſs jargon of barbarous terms, reduced the ſcience to clear and ſimple ideas, and promiſed nothing that he did not perform. In 1681, he was diſturbed on account of his religion; and came to England, where he was well received by Charles II.; but affairs not promiſing him the ſame tranquillity, he returned to France, and ſought for ſhelter under a Doctor's degree; but the revocation of the edict of Nantz drove him into the Romiſh communion to avoid perſecution. He then became aſſociate chemiſt and penſionary in the royal academy of ſciences, and died in 1715. He wrote, A courſe of chemiſtry; An univerſal pharmacopœia; An univerſal treatiſe of drugs; and, A treatiſe on antimony.

LEMING, in zoology. See Mus.

LEMMA, (of λαμβανω, "I aſſume,") in mathematics, denotes a previous propoſition, laid down in order to clear the way for ſome following demonſtration; and prefixed either to theorems, in order to render their demonſtration leſs perplexed and intricate; or to problems, to make their reſolution more eaſy and ſhort. Thus, to prove a pyramid one third of a priſm, or parallelopiped, of the ſame baſe and height with it, the demonſtration whereof in the ordinary way is difficult and troubleſome; this lemma may be premiſed, which is proved in the rules of progreſſion, that the ſum of the ſeries of the ſquares, in numbers in arithmetical progreſſion, beginning from 0, and going to 1, 4, 9, 16, 25, 36, &c. is always ſubtriple of the ſum of as many terms, each equal to the greateſt; or is always one-third of the greateſt term multiplied by the number of terms. Thus, to find the inflection of a curve line, this lemma is firſt premiſed, that a tangent may be drawn to the given curve in a given point.

So in phyſics, to the demonſtration of moſt propoſitions, ſuch lemmata as theſe are neceſſary firſt to be allowed: that there is no penetration of dimenſions; that all matter is diviſible; and the like. As alſo in the theory of medicine, that where the blood circulates, there is life, &c.

LEMNA, Duck-meat, in botany; a genus of the diandria order, belonging to the monœcia claſs of plants; and in the natural method ranking under the 54th order, *Miſcellaneæ*. The male calyx is monophyllous; there is no corolla; the female calyx monophyllous; there is no coralla, one ſtyle; the capſule unilocular. There are three ſpecies, all natives of Britain, growing frequently in ditches and the ſhallow parts of ſtagnant waters. All of them are acceptable food for ducks and geeſe.

LEMNIAN-earth, *Terra Lemnia*, a medicinal, aſtringent ſort of earth, of a fatty conſiſtence and reddiſh colour; uſed in the ſame caſes as bole. It has its name from the iſland of Lemnos, whence it is chiefly brought. Many form it into round cakes, and impreſs a ſeal upon it; whence it is alſo called *terra ſigillata*. A ſort is ſaid to be imported from Senegal, which is not properly an earth, though ſo called, but compoſed of the dried pulp of the fruit of the Baobas.

LEMNIUS (Lævinus), a famous phyſician, born at Ziric Zee in Zealand, in 1505. He practiſed phyſic with applauſe; and after his wife's death being made prieſt, became canon of Ziric-Zee, where he died in 1560. He left ſeveral eſteemed works, the principal of which is intitled *De occultis naturæ miraculis*.

LEMNOS (anc. geo.), a noble iſland in the Ægean ſea, near Thrace, called alſo *Dipolis*, from its conſiſting of two towns. The firſt inhabitants were the Pelaſgi, or rather the Thracians, who were murdered by their wives. After them came the children of the Lemnian widows by the Argonauts, whoſe deſcendants were at laſt expelled by the Pelaſgi, about 1100 years before the Chriſtian era. Lemnos is about 112 miles in circumference according to Pliny; who ſays, that it is often

ten ſhadowed by mount Athos, though at the diſtance of 87 miles. It has been called *Hipſipyle*, from queen Hipſipyle. It is famous for a certain kind of earth or chalk called *terra Lemuia*, or *terra ſigillata* from the ſeal or impreſſion which it can bear, and which is uſed for conſolidating wounds. As the inhabitants were blackſmiths, the poets have taken occaſion to fix the forges of Vulcan in that iſland, and to conſecrate the whole country to his divinity. Lemnos is alſo celebrated for a labyrinth, which, according to ſome traditions, ſurpaſſed thoſe of Crete and Egypt. Some remains of it were ſtill viſible in the age of Pliny. The iſland of Lemnos was reduced under the power of Athens by Miltiades.

LEMON, in botany. See Citrus.

Lemon-Iſland, one of the Skelig-iſlands ſo called; ſituated off the coaſt of the county of Kerry, in the province of Munſter in Ireland. It is rather a round rock, always above water, and therefore no way dangerous to ſhips. An incredible number of gannets and other birds breed here; and it is remarkable that the gannet neſtles no where on the ſouthern coaſts of Ireland but on this rock, though many of them are ſeen on all parts of the coaſts on the wing. There is another rock on the northern coaſt of Ireland remarkable for the ſame circumſtance.

LEMONADE, a liquor prepared of water, ſugar, and lemon or citron juice; it is very cooling and grateful.

LEMOVICES, a people of Aquitania, ſituated between the Bituriges Cubi to the north, the Averni to the eaſt, the Cadurci to the ſouth, and the Pictones to the weſt. Now the *Limoſin* and *Ma Marche*.

LEMUR, the Maucauco, in zoology, a genus of quadrupeds belonging to the order of primatus, the characters of which are theſe: There are four foreteeth in the upper jaw, the intermediate ones being remote; and ſix long, compreſſed, parallel teeth in the under jaw; the dog-teeth are ſolitary, and the grinders are ſomewhat lobated.

1. The tardigradus, or tail-leſs maucauco, a ſmall animal found in Bengal and the iſland of Ceylon. It is of a very ſingular conſtruction, and perhaps longer in proportion to its thickneſs than any other quadruped. The head is roundiſh, with a ſharp-pointed noſe, and ſmall ears: the body is covered with ſhort, ſoft, and ſilky aſh-coloured and reddiſh fur: the toes are naked, and the nails flat; excepting thoſe of the inner toe on each hind foot, which are long, crooked, and ſharp. The length of the animal from the noſe to the rump is ſixteen inches.—It lives in the woods, and feeds on fruits: In a tame ſtate it appears to be fond of eggs, and it would alſo greedily devour ſmall birds. This animal has the inactivity of the ſloth, and creeps ſlowly along the ground: it is very tenacious of its hold, and makes a plaintive noiſe.

A variety of the above, or according to Mr Pennant a diſtinct ſpecies, is,

2. The *loris* of Buffon, or *tardigradus* of Seba. It has a produced dog-like viſage, with the forehead high above the noſe: the ears are large, thin, and rounded: the body is ſlender and weak: limbs are very long and ſlender; and the thumb on each foot is more diſtinct, and ſeparate from the toes: the hair on the body is univerſally ſhort, and delicately ſoft; the colour on the upper part tawny, beneath whitiſh. In length, from the tip of the noſe to the anus, the animal is only eight inches. It differs totally in form and in nature from the preceding; and notwithſtanding the epithet of *tardigradus* or *ſloth* given in Seba, it is very active, and aſcends trees moſt nimbly. It has the actions of an ape; and, if we credit Seba, the male climbs the trees, and taſtes the fruits before it preſents them to its mate.

3. The mongooz, or woolly maucauco, inhabits Madagaſcar, and the iſlands to the eaſtward as far as Celebes. It is about the ſize of a cat, and has the whole upper part of the body covered with long, ſoft, and thick fur, a little curled or waved, of a deep browniſh aſh-colour; the tail is very long, covered with the ſame ſort of hair, and of the ſame colour. It lives on fruits, turns its tail over its head to protect it from rain, and ſleeps on trees; it is very ſportive and good-natured, and very tender.

4. The catta, or ring-tailed maki, inhabits Madagaſcar and the neighbouring iſles. It is of the ſize of a cat; has the hair on the top and hind-part of the head of a deep aſh colour, the back and ſides reddiſh, the belly and inſides of the limbs white; all its hair is very ſoft, cloſe and fine, and erect like the pile of velvet; the tail is twice the length of the body. It is very good natured, and has all the life of a monkey, without its miſchievous diſpoſition: it is very cleanly, and has a weak cry. In a wild ſtate they go in troops of 30 or 40, and are eaſily tamed when taken young.

5. The caudatus-niger, or ruffed maucauco, (the *Vari* of Buffon), is alſo an inhabitant of Madagaſcar. It is ſomewhat larger than the laſt, and has long hair ſtanding out round the ſides of the head like a ruff; a long tail; the colour of the whole animal generally black, but ſometimes white ſpotted with black. In a wild ſtate, it is very fierce; and makes ſuch a violent noiſe in the woods, that the cries of two might be eaſily miſtaken for the noiſe made by a hundred.

6. The volans, or flying maucauco, reſembles a bat: being furniſhed with a ſtrong membrane like that animal, by which it is enabled to fly. It inhabits the country about Guzarat, the Molucca iſles, and the Philippines; feeds on the fruits of the trees, and is very diſtinct both from the bat and flying ſquirrel. Its hiſtory, however, is very little known.

7. The *tarſier* of Buffon (ranked by Mr Pennant under this genus) has a pointed viſage; ſlender noſe, bilobated at the end: eyes large and prominent: ears erect, broad, naked, ſemitranſparent, an inch and a half long, with a tuft of hairs between them on the top of the head, and long hairs on each ſide of the noſe and on the upper eye-brow. In each jaw are two cutting and two canine teeth; which form an exception in this genus. There are four long ſlender toes and a diſtinct thumb on each foot; the thumbs on the hind feet very broad and greatly dilated at their ends: the tail is almoſt naked; the greater part round and ſcaly like that of a rat, but growing hairy towards the end, which is tufted. The penis is pendulous; and the ſcrotum and teſticles are of a vaſt ſize in proportion to the animal. The length of the animal from noſe to tail is near ſix inches: to the hind toes eleven and a half, the hind legs, like thoſe of the jerboa, being of a great

length; the tail is nine inches and a half long. It inhabits the remoteſt iſlands of India, eſpecially Amboina; and is called by the Macaſſars *podje*.

8. The little maucauco has a rounded head, ſharp noſe, long whiſkers; two canine teeth in each jaw; four cutting teeth in the upper jaw, ſix in the lower: ſeven grinders on each ſide; the neareſt ſharp, the more diſtant lobated: the ears are large, roundiſh, naked, and membranaceous; the eyes very large and full. The toes are long, and of unequal lengths; the ends round; the nails round, and very ſhort; except that of the firſt toe, which is long and ſharp: the tail is hairy, of the length of the body, and prehenſile. The animal is rather leſs than the black rat; and, in Mr Pennants opinion, ſeems to be the ſame which Buffon calls *le rat de Madegaſcar*. It is ſuppoſed to live in the palm trees, and feed on fruits. It holds its food in its fore-feet like ſquirrels; is lively, and has a weak cry; and when it ſleeps, it rolls itſelf up.

There are three or four other ſpecies; thoſe above deſcribed are figured on Plate CCLXVIII.

LEMURES, in antiquity, ſpirits or hobgoblins; reſtleſs ghoſts of departed perſons, who return to terrify and torment the living.

Theſe are the ſame with *larvæ*, which the ancients imagined to wander round the world, to frighten good people, and plague the bad. For which reaſon at Rome they had *lemuria* or feaſts inſtituted to appeaſe the manes of the defunct. See LARES.

Apuleius explains the ancient notion of manes thus: the ſouls of men releaſed from the bands of the body, and freed from performing their bodily functions, become a kind of dæmons or genii, formerly called *lemures*. Of theſe *lemures*, thoſe that were kind to their families were called *lares familiares*; but thoſe who, for their crimes, were condemned to wander continually, without meeting with any place of reſt, and terrified good men, and hurt the bad, are vulgarly called *larvæ*.

An ancient commentator on Horace mentions, that the Romans wrote *lemures* for *remures*; which laſt word was formed from Remus, who was killed by his brother Romulus, and who returned to earth to torment him.

But Apuleius obſerves, that in the ancient Latin tongue *lemures* ſignifies the ſoul of a man ſeparated from the body by death.

LEMURIA, or LEMURALIA, a feaſt ſolemnized at Rome on the 9th of May, to pacify the manes of the dead or in the honour of the lemures.—It was inſtituted by Romulus, to appeaſe the ghoſt of his murdered brother Remus, which he thought was continually purſuing him to revenge the horrid crime.—The name lemuria is therefore ſuppoſed to be a corruption of Remuria, *i. e.* the feaſt of Remus. Sacrifices continued for three nights, the temples were ſhut up, and marriages were prohibited during the ſolemnity. A variety of whimſical ceremonies were performed, magical words made uſe of, and the ghoſts deſired to withdraw, without endeavouring to hurt or affright their friends above ground. The chief formalities were ablution, putting black beans into their mouths, and beating kettles and pans, to make the goblins keep their diſtance.

LENA, a great river of Siberia in Aſia, which takes its riſe in N. Lat. 52. 30. and E. Long. 124. 30. from Ferro. After traverſing a large tract of land, it divides itſelf into five branches about Lat. 73°. Three of theſe run weſtward, and two eaſtward, by which it diſcharges itſelf into the Icy Sea. Its three weſtern mouths lie in 143° E. Long. from Ferro, but the eaſtern ones extend to 153. The current is every where ſlow, and its bed entirely free from rocks. The bottom is ſandy, and the banks are in ſome places rocky and mountainous. Sixteen large rivers fall into the Lena during its courſe to the northern ocean.

LENÆA, a feſtival kept by the Greeks in honour of Bacchus, at which there was much feaſting and Bacchanalian jollity, accompanied with poetical contentions, and the exhibition of tragedies. The poor goat was generally ſacrificed on the occaſion, and treated with various marks of cruelty and contempt, as being naturally fond of brouſing on the vine-ſhoots.

LENFANT (James), a learned French writer born in 1661. After ſtudying at Saumur, he went to Heidelberg, where he received impoſition of hands for the miniſtry in 1684. He diſcharged the functions of this character with great reputation there, as chaplain of the electreſs dowager Palatine, and paſtor in ordinary to the French church. The deſcent of the French into the Palatinate obliged our author to depart from Heidelberg in 1688. He went to Berlin, where the elector Frederic, afterward king of Pruſſia, appointed him one of the miniſters. There he continued 39 years, diſtinguiſhing himſelf by his writings. He was preacher to the queen of Pruſſia, Charlotta Sophia; and after her death, to the late king of Pruſſia. In 1707 he took a journey to England and Holland, where he had the honour to preach before Queen Anne; and might have ſettled in London, with the title of *chaplain to her majeſty*. In 1712 he went to Helmſtadt, in 1715 to Leipſic, and in 1725 to Breſlaw, to ſearch for rare books and MSS. It is not certain whether it was he that firſt formed the deſign of the *Bibliotheque Germanique*, which began in 1720: or whether it was ſuggeſted to him by one of the ſociety of learned men, which took the name of *Anonymous*, and who ordinarily met at his houſe. He died in 1728. His principal works are, 1. The Hiſtory of the Council of Conſtance, 2 vols 4to. 2. A Hiſtory of the Council of Piſa, 2 vols 4to. 3. The New Teſtament tranſlated from the Greek into the French, with Notes by Beauſobre and Lenfant, 2 vols 4to. 4. The Hiſtory of Pope Joan, from Spanheim's Latin diſſertation. 5. Several pieces in the *Bibliotheque Choiſie, La Republic des Lettres, La Bibliothque Germanique*, &c.

LENGLET (Nicholas du Freſnoy, l'abbe), born at Beauvais in France, 1674, was a moſt fertile and uſeful French author on a variety of ſubjects, hiſtorical, geographical, political, and philoſophical. The following deſerve particular notice: 1. A Method of Studying Hiſtory, with a Catalogue of the Principal Hiſtorians of every age and country, publiſhed in 1713; a work which eſtabliſhed his reputation as an hiſtorical writer: it was tranſlated into moſt of the modern languages, particularly our own, with conſiderable improvements, by Richard Rawlinſon, LL. D. and F. R. S. and publiſhed at London in 1730, in 2 vols 8vo. 2. A Copious Abridgment of Univerſal

BRITISH MUSEUM

Hiſtory and Biography, in chronological order, under the title of *Tablettes Chronologiques*; which made its firſt appearance at Paris in 1744, in 2 vols ſmall 8vo, and was univerſally admired by the literati in all parts of Europe. The author attended with great candour, as every writer ought, to well founded judicious criticiſms. In future editions he made ſeveral alterations and improvements, and from one of theſe, we believe that of 1759, an Engliſh tranſlation was made, and publiſhed at London in 1762, in 2 vols large 8vo. Du Freſnoy died in 1755; the Paris edition of 1759 was printed from the author's corrected copy; and the impreſſion being ſold off, another edition appeared in 1763, with conſiderable improvements by an unknown editor; to the biographical part, a great number of names of reſpectable perſons are added, not to be found in the former edition; and it has this ſuperior advantage in the hiſtorical parts, that the general hiſtory is brought down to the year 1762. Du Freſnoy, however, has loaded his work with catalogues of ſaints, martyrs, councils, ſynods, hereſies, ſchiſms, and other eccleſiaſtical matters, fit only for the libraries of Popiſh convents and ſeminaries.

LENGTH, the extent of any thing material from end to end. In duration, it is applied to any ſpace of time, whether long or ſhort.

LENGTHENING, in ſhip carpentry, the operation of cutting a ſhip-down-acroſs the middle, and adding a certain portion to her length. It is performed by ſawing he planks aſunder in different places of her length, on each ſide of the midſhip frame, to prevent her from being too much weakened in one place. The two ends are then drawn apart to a limited diſtance; which muſt be equal to the propoſed addition of length. An intermediate piece of timber is next added to the keel, upon which a ſufficient number of timbers are erected, to fill up the vacancy produced by the ſeparation. The two parts of the keleſon are afterwards united by an additional piece which is ſcored down upon the floor-timbers, and as many beams as may be neceſſary are fixed acroſs the ſhip in the new interval. Finally, the planks of the ſide are prolonged ſo as to unite with each other; and thoſe of the ceiling refitted in the ſame manner; by which the whole proceſs is completed.

LENEICIA, a ſtrong town of Poland, and capital of a palatinate of the ſame name, with a fort ſeated on a rock. The nobility of the province hold their diet here. It ſtands in a moraſs on the banks of the river Bſura, in E. Long. 19. 25. N. Lat. 52. 12.

LENOX or DUNBARTON *Shire*, a county of Scotland, ſtretching 14 miles in length and 20 in breath, is bounded on the ſouth by the river and frith of Clyde, on the weſt by Lochlong and Argyleſhire, on the north by the Grampian hills, and on the eaſt by Monteith and Stirlingſhires. Great part of this county conſiſts of hills and heaths, fit for nothing but paſturage and ſport; even in the lower lands, the ſoil is not extremely fertile; yet the face of the country is agreeably diverſified with hill, dale, mountain, heath, ſtreams, lakes, woods, and fields of corn; the ſhire is likewiſe beautified with a great number of agreeable ſeats and plantations, belonging to gentlemen of fortune. Part of this county is waſhed by the river Clyde in its courſe to the ſea: even at the caſtle of Dunbarton, the breadth of it amounts to two miles at high-water, and it continues extending in width and depth until it joins the ocean. From the mouth of the Clyde, the two bays of Lochlong and Lochfyn make large indentations in the ſhire of Dunbarton. The only river of any conſideration that runs through this county, is the Leven, the Lelanonius of Ptolemy, otherwiſe called *Levinia*, the Latin name for Lenox. The river Leven is a pure tranſparent paſtoral ſtream, that warbles over a bed of pebbles, through a delightful vale adorned with farms, ſeats, woods, and plantations. It derives its origin from the great lake called *Lochlomond*, of which indeed it is the overflowing, and, after a delightful meandring courſe of five or ſix miles, diſembogues itſelf into the Clyde at the caſtle of Dunbarton. But the greateſt curioſity of this county is Lochlomond itſelf, a vaſt body of freſh water, ſupplied by ſubterraneous ſprings and rivulets, ſurrounded with huge mountains, extending 25 miles in length, and in ſome places five miles in breadth, incredibly deep in every part, interſperſed with 24 verdant iſles, ſome of which are ſtocked with red deer, and inhabited. Nothing can be more wildly romantic than this part of the country during the ſummer-ſeaſon, on the ſouth ſide of the lake: the high road runs in ſome places through natural woods; overhung, on one hand, by ſteep mountains, covered with flowery heath; and on the other opening in long viſtas upon the lake, terminated by green iſlands that ſeem to float upon the water. Among the rivers of this ſhire we ſhall likewiſe mention the water of Blane, which though itſelf an inconſiderable ſtream, hath been rendered famous by the birth of George Buchanan, the celebrated Latin poet and hiſtorian. He was born on the north ſide of the lake, not far from the place called *Buchanan*, where we may behold an elegant ſeat belonging to the duke of Montroſe, head of the noble family of Graham, ſo often diſtinguiſhed by its loyalty, integrity, and valour. The ſame part of the country gave birth to the great mathematician and naturaliſt, Napier, Lord Merchiſton, inventor of the logarithms. The title of *Lenox*, with the property of great part of the ſhire, was heretofore veſted in a branch of the royal family of Stuart, with which it was reunited in the perſon of King James VI. whoſe father, Henry Lord Darnly, was ſon to the duke of Lenox. This prince conferred the title upon his kinſman Eſme Stuart, ſon of John Lord d'Aubigney in France: but, his race failing at the death of Charles duke of Lenox and Richmond, and the eſtate devolving to the crown, King Charles II. conferred both titles on his own natural ſon by the ducheſs of Portſmouth; and they are ſtill enjoyed by his poſterity. The people of Lenoxſhire are chiefly Lowlanders, though in ſome parts of it divine ſervice is performed in the Erſe language. The moſt numerous clans in this diſtrict, are the Macfarlane, the Colquhouns, and the Buchanans. They generally profeſs the proteſtant faith, according to the Preſbyterian diſcipline; yet ſome of the gentlemen follow the Engliſh ritual. The commonalty are for the moſt part ſober, honeſt, and induſtrious; and though they live poorly, are tall, vigorous, and healthy.

LENS, a piece of glaſs, or any other tranſparent ſubſtance, the ſurfaces of which are ſo formed, that the rays of the light, by paſſing through it, are made to change their direction, either tending to meet in a point beyond the lens, or made to become parallel after converging or diverging; or laſtly, proceeding as if they had iſſued from a point before they fell upon the lens. Some lenſes are convex, or thicker in the middle; ſome concave, or thinner in the middle: ſome plano-convex, or plano-concave; that is with one ſide flat and the other convex or concave; and ſome are called *meniſcuſes*, or convex on one ſide and concave on the other. See DIOPTRICS, p. 32.

LENT, a ſolemn time of faſting in the Chriſtian church, obſerved as a time of humiliation before Eaſter, the great feſtival of our Saviour's reſurrection.

Thoſe of the Romiſh church, and ſome of the Proteſtant communion, maintain, that it was always a faſt of 40 days, and, as ſuch, of apoſtolical inſtitution. Others think it was only of eccleſiaſtical inſtitution, and that it was variouſly obſerved in different churches, and grew by degrees from a faſt of 40 hours to a faſt of 40 days. This is the ſentiment of Morton, Biſhop Taylor, Du Moulin, Daillé, and others.

Anciently the manner of obſerving lent among thoſe who were piouſly diſpoſed, was to abſtain from food till evening: their only refreſhment was a ſupper; and then it was indifferent whether it was fleſh or any other food, provided it was uſed with ſobriety and moderation.

Lent was thought the proper time for exerciſing, more abundantly, every ſpecies of charity. Thus what they ſpared from their own bodies by abridging them of a meal, was uſually given to the poor; they employed their vacant hours in viſiting the ſick and thoſe that were in priſon, in entertaining ſtrangers, and reconciling differences. The imperial laws forbad all proſecution of men in criminal actions, that might bring them to corporal puniſhment and torture, during the whole ſeaſon. This was a time of more than ordinary ſtrictneſs and devotion, and therefore in many of the great churches they had religious aſſemblies for prayer and preaching every day. All public games and ſtage-plays were prohibited at this ſeaſon; as alſo the celebration of all feſtivals, birth-days, and marriages, as unſuitable to the preſent occaſion.

The Chriſtians of the Greek chruch obſerve four lents; the firſt commences on the 15th of November; the ſecond is the ſame with our lent; the third begins the week after Whitſuntide, and continues till the feſtival of St Peter and St Paul: and the fourth commences on the firſt of Auguſt, and laſts no longer than till the 15th. Theſe lents are obſerved with great ſtrictneſs and auſterity; but on Saturdays and Sundays they indulge themſelves in drinking wine and uſing oil, which are prohibited on other days.

LENTIL, in botany. See ERVUM.

LENTINI. See. LEONTINI.

LENTISCUS, in botany. See PISTACIA.

LEO, in zoology. See FELIS.

LEO, in aſtronomy, the fifth of the 12 ſigns of the zodiac. The ſtars in the conſtellation *Leo* in Ptolemy's catalogue are 17, beſides the informes, which are 8; in Tycho's 30; in the Britannic catalogue 25.

LOE X. whoſe proper name was John de Medicis, is a pope ever to be remembered by Proteſtants, as having proved the cauſe of the reformation begun by Martin Luther. He had been honoured with a cardinal's had at 14 years of age, and ſome years after with the dignity of legate by Julius II. He was in that quality in the army which was defeated by the French near Ravenna in 1512, where he was taken priſoner. The ſoldiers, who had overcome him, ſhowed him ſuch great veneration, that they humbly aſked his pardon for gaining the victory, beſought him to give them abſolution for it, and promiſed never to bear arms againſt the pope. When pope Julius died, Leo was very ill of the venereal diſeaſe at Florence, and was carried to Rome in a litter. His hurrying about every night to the cardinals of his faction, occaſioned the breaking of his ulcer; and the matter which ran from it exhaled ſuch a ſtench, that all the cells in the conclave, which were ſeparated only by thin partitions, were poiſoned by it. Upon this the cardinals conſulted the phyſicians of the conclave, to know what the matter was. They, being bribed, ſaid the cardinal de Medicis could not live a month; which ſentence occaſioned his being choſen pope. Thus cardinal de Medicis, then not 30 years of age, was elected pope upon a falſe information; and as joy is the moſt ſovereign of all remedies, he ſoon after recovered his health, ſo that the old cardinals had reaſon to repent their credulity.—He was better calculated for a temporal prince, being ambitious, politic, luxurious, a connnoiſſeur in the fine arts, and an accompliſhed fine gentleman: thus qualified, it is no wonder that ſo young a pontiff, neglecting the true intereſt of his church, ſhould avail himſelf of the folly of religious dupes, and publicly ſell indulgences to ſupport his prodigality, eſpecially as he was known to diſbelieve Chriſtianity itſelf, which he called *A very profitable fable for him and his predeceſſors*. In 1517, he publiſhed general indulgences throughout Europe (and ordered the prieſts to recommend them) in favour of thoſe who would contribute any ſum towards completing the church of St Peter; and this was the baſis of the reformation. See LUTHER and INDULGENCE.) Leo died in 1521.

It is but juſtice to add, that to this pope was principally owing the revival of polite literature in Italy. He ſpared neither pains nor expence in recovering ancient manuſcripts, and procuring good editions of them: he favoured the arts and ſciences; and gloried in being the patron of learned and ingenious men, who in return have been very laviſh in his praiſe. Mr Pope, in his eſſay on Criticiſm, beſtows on him theſe harmonious lines.

> But ſee! each muſe in Leo's golden days,
> Starts from her trance; and trims her wither'd bays;
> Rome's ancient Genius, o'er its ruins ſpread,
> Shakes off the duſt, and rears its rev'rend head.
> Then Sculpture and her ſiſter Arts revive:
> Stones leap to form, and rocks begin to live;
> With ſweeter notes each riſing temple rung;
> A Raphael painted, and a Vida ſung.

LEO (St), a ſmall but ſtrong town of Italy, in the territory of the church, and dutchy of Urbino, with a biſhop's ſee. It is ſeated on a mountain, near the river Marrechia, in E. Long. 12. 25. N. Lat. 43. 57.

LEOMINSTER, a town of Herefordſhire, in

England, ſeated on the river Lug, which waters the north and eaſt ſides of the town, and over which there are ſeveral bridges. It is a large, handſome, populous borough; and is a great thoroughfare betwixt South-Wales and London, from which laſt it is diſtant 113 meaſured miles. In King John's reign it was burnt, but ſoon after rebuilt. It was incorporated by Queen Mary, and is governed by a high ſteward, bailiff, recorder, 12 capital burgeſſes (out of whom the bailiff is choſen), and a town-clerk. Its market is on Friday, and its fairs, which are all noted for horſes and black cattle, on February 13th, Tueſday after Midlent-Sunday, May 13th, July 10th, September 4th, and November 1ſt. The market was on Thurſday till it was changed, on a petition from the cities of Hereford and Worceſter, complaining of their loſs of trade; ſince which, the vaſt trade it had in wool and wheat is much leſſened. The beſt flax is ſaid to grow here, and it has been equally noted for the beſt wheat, barley, and the fineſt bread. The inhabitants drive a conſiderable trade not only in the wool, but in gloves, leather, hat-making, &c. and there are ſeveral rivers in and about the town on which they have mills and other machines. Near its church are ſome remains of its priory; and on a neighbouring hill are the ruins of a palace, called to this day Comfort-Caſtle. It has ſeveral good inns, and ſends two members to parliament. W. Long. 2. 45. N. Lat. 52. 20.

LEON, an ancient town of France, in Lower Bretagne, and capital of the Lyonnois, with a biſhop's ſee. It is ſeated near the ſea, in W. Long. 3. 55. N. Lat. 48. 41.

Leon, a province of Spain, with the title of a kingdom; bounded on the north by Aſturias; on the weſt by Galicia and Portugal; and on the ſouth by Eſtremadura and Caſtile, which alſo bounds it on the eaſt. It is about 125 miles in length, and 100 in breadth; and is divided into two almoſt equal parts by the river Duero, or Douro. It produces all the neceſſaries of life, and Leon is the capital town.

Leon, an ancient and large epiſcopal town of Spain, and capital of the kingdom of that name, built by the Romans in the time of Galba. It has the fineſt cathedral church in all Spain. It was formerly more rich and populous than at preſent, and had the honour of being the capital of the firſt Chriſtian kingdom in Spain. It is ſeated between two ſources of the river Eſra, in W. Long. 5. 13. N. Lat. 42. 55.

Leon (Peter Cieca de), author of the hiſtory of Peru. He left Spain his native country at 13 years of age, in order to go into America, where he reſided 17 years; and obſerved ſo many remarkable things, that he reſolved to commit them to writing. The firſt part of this hiſtory was printed at Seville in 1553. He began it in 1541, and ended it in 1550. He was at Lima, the capital of the kingdom of Peru, when he gave the finiſhing ſtroke to it, and was then 32 years of age.

Leon *de Nicaragua*, a town of North America, in New Spain, and in the province of Nicaragua; the reſidence of the governor, and a biſhop's ſee. It conſiſts of about 1000 houſes, and has ſeveral monaſteries and nunneries belonging to it. At one end of the town is a lake which ebbs and flows like the ſea. The town is ſeated at the foot of a volcano, which renders it ſubject to earthquakes. It was taken by the buccaneers in 1685, in ſight of a Spaniſh army who were ſix to one. W. Long. 86. 10. N. Lat. 12. 25.

LEONARD DE NOBLET (St) an ancient town of France, in the province of Guienne and territory of Limoſin, with a conſiderable manufactory of cloth and paper. It is ſeated on the river Vienne, in E. Long. 1. 35. N. Lat. 45. 50.

LEONARDO DA VINCI. See Vinci.

LEONCLAVIUS (John), one of the moſt learned men of the 16th century, was a native of Weſtphalia. He travelled into Turkey, and collected excellent materials for compoſing *The Ottoman Hiſtory*; and it is to him that the public are indebted for the beſt account we have of that empire. To his knowledge in the learned languages, he had added that of the civil law; whereby he was well qualified to tranſlate the *Baſilica*. His other verſions were eſteemed, though critics pretend to have found many faults in them. He died in 1593, aged 60.

LEONIDAS I. king of Sparta, a renowned warrior, ſlain in defending the ſtraits of Thermopylæ againſt Xerxes, 480 B. C. See Sparta.

LEONINE, in poetry, is applied to a kind of verſes which rhime at every hemiſtic, the middle always chiming to the end. Of which kind we find ſeveral ancient hymns, epigrams, prophecies, &c.—For inſtance, Muretus ſpeaking of the poetry of Lorenzo Gambara of Breſſe, ſays,

> *Brixia, veſt*ratis *merdoſa volumina* vatis,
> *Non ſunt noſt*rates *tergere digna* nates.

The following one is from the ſchool of Salernum:

> *Ut vites* pœnam *de potibus incipe* cœnam.

The origin of the word is ſomewhat obſcure: Paſquier derives it from one Leoninus or Leonius, who excelled in this way; and dedicated ſeveral pieces to Pope Alexander III.; others derive it from Pope Leo; and others from the beaſt called *lion*, by reaſon it is the loftieſt of all verſes.

LEONTICA, feaſts or ſacrifices, celebrated among the ancients in honour of the ſun.—They were called *Leontica*, and the prieſts who officiated at them *Leones*, becauſe they repreſented the ſun under the figure of a lion radiant, bearing a tiara, and griping in his two fore-paws the horns of a bull, who ſtruggled with him to diſengage himſelf.

The critics are extremely divided about this feaſt. Some will have it anniverſary, and to have made its return not in a ſolar but in a lunar year; but others hold its return more frequent, and give inſtances where the period was not above two hundred and twenty days.

The ceremony was ſometimes alſo called *Mithriaca*; Mithras being the name of the ſun among the ancient Perſians. There was alſo a man ſacrificed at theſe feaſts, till the time of Hadrian, who prohibited it by a law. Commodus introduced the cuſtom afreſh, after whoſe time it was again exploded.

LEONTICE, LION'S LEAF: A genus of the monogynia order, belonging to the hexandria claſs of plants; and in the natural method ranking under the 24th order, *Corydales*. The corolla is hexapetalous; the nectarium hexaphyllous, ſtanding on the heels of the corolla, with its limb patent; the calyx hexaphyllous,

lous and deciduous. There are four ſpecies, natives of the ſouthern parts of Europe, two of which are ſometimes cultivated in this country. Theſe are, 1. The chryſogonum with winged leaves; and, 2. The leontopetalum with decompounded leaves. Both thoſe plants are natives of the Archipelago iſlands, and alſo grow in corn-fields about Aleppo in Syria, where they flower ſoon after Chriſtmas. They have large tuberous roots like thoſe of the cyclamen, covered with a dark-brown bark. The flowers ſit upon naked footſtalks: thoſe of the firſt ſort ſuſtain many yellow flowers, but the flowers of the ſecond are of a paler colour. Both ſpecies are propagated by ſeeds, which muſt be ſown ſoon after they are ripe, otherwiſe they ſeldom ſucceed. When ſent to diſtant countries, they muſt be preſerved in ſand. The plants are, however, very difficult to be preſerved in Britain: for they will not thrive in pots; and when they are planted in the full ground, froſt frequently deſtroys them. The beſt way is to ſow the ſeed as ſoon as it comes from abroad, covering it with glaſſes in the winter to protect it from froſt; and, in the ſpring, when the plants begin to appear, they muſt have free air admitted to them at all times when the weather is mild, otherwiſe they will be weak.

LEONTINI, or **LEONTIUM** (anc. geog.), a town of Sicily on the ſouth ſide of the river Terais, 20 miles north-weſt of Syracuſe. The territory called *Campi Leontini*, was extremely fertile (Cicero): theſe were the *Campi Læſtrigonii*, anciently ſo called; the ſeat of the Læſtrigons; according to the commentators on the poets. The name *Leontini* is from *Leo*, the impreſſion on their coins being a lion. Now called *Lentini*, a town ſituated in the Val di Noto, in the ſouth-eaſt of Sicily.

LEONTIUM, one of the twelve towns of Achaia, whether on, or more diſtant from, the bay of Corinth, is uncertain. *Leontium* of Sicily. See LEONTINI.

LEONTODON, DANDELION: a genus of the polygamia æqualis order, belonging to the ſyngeneſia claſs of plants; and in the natural method ranking under the 49th order, *Compoſitæ*. The receptacle is naked; the calyx imbricated, with the ſcales ſomewhat looſe; the pappus feathery. There are nine ſpecies, of which the only remarkable one is the Taraxacum, or common dandelion, found on the road ſides, in paſtures, and on the banks of ditches. Early in the ſpring, the leaves whilſt yet white and hardly unfolded are an excellent ingredient in ſalads. The French eat the roots and tender leaves with bread and butter. Children that eat it in the evening experience its diuretic effects in the night, which is the reaſon that other European nations as well as the Britiſh vulgarly call it *piſs-a-bed*. When a ſwarm of locuſts had deſtroyed the harveſt in the iſland of Minorca, many of the inhabitants ſubſiſted upon this plant. The expreſſed juice has been given to the quantity of four ounces three or four times a day; and Boerhaave had a great opinion of the utility of this and other lacteſcent plants in viſceral obſtructions. Goats eat it; ſwine devour it greedily; ſheep and cows are not fond of it, and horſes refuſe it. Small birds are fond of the ſeeds.

LEONURUS, LION'S-TAIL: a genus of the gymnoſpermia order, belonging to the didynamia claſs of plants; and in the natural method ranking under the 42d order, *Verticillatæ*. The antheræ are powdered with ſhining points, or ſmall elevated globular particles.

Species. 1. The Africana, with ſpear-ſhaped leaves, is a native of Ethiopia. It riſes with a ſhrubby ſtalk ſeven or eight feet high, ſending out ſeveral four cornered branches, garniſhed with oblong narrow leaves, acutely indented on their edges, hairy on their upper ſide, and veined on the under ſide, ſtanding oppoſite. The flowers are produced in whorls, each of the branches having two or three of theſe whorls towards their ends. They are of the lip kind, ſhaped ſomewhat like thoſe of the dead nettle; but are much longer, and covered with ſhort hairs. They are of a golden ſcarlet colour, ſo make a fine appearance. The flowers commonly appear in October and November, and ſometimes continue till the middle of December, but are not ſucceeded by ſeeds in Britain. There is a variety with variegated leaves which is admired by ſome, but the whorls of flowers are ſmaller than thoſe of the plain ſort. 2. The nepetæfolia, with oval leaves, is a native of the Cape of Good Hope. This riſes with a ſquare ſhrubby ſtalk about three feet high, ſending out ſeveral four-cornered branches, garniſhed with oval crenated leaves, rough on their under ſide like the dead-nettle, but veined on the upper ſide, and placed oppoſite. The flowers come out in whorls like thoſe of the former ſort, but are not ſo long nor ſo deep coloured. They appear at the ſame ſeaſon with the firſt, and continue as long in beauty. There are three other ſpecies, but the above are the moſt remarkable.

Culture. Both ſorts are propagated by cuttings, which ſhould be expoſed to the air long enough to harden the ſhoots, and planted in the beginning of July, after which they will take root very freely. They ſhould be planted in a loamy border to an eaſtern aſpect; and if they are covered cloſely with a bell or hand-glaſs to exclude the air, and ſhaded from the ſun, it will forward their putting forth roots. As ſoon as they have taken good root, they ſhould be taken up and planted each in a ſeparate pot filled with ſoft loamy earth, and placed in the ſhade till they have taken new root. In October they muſt be removed into the green-houſe.

LEOPARD. See FELIS.

LEOPARD's Bane, in botany. See DORONICUM.

LEPANTO, a ſtrong and very conſiderable town of Turkey in Europe, and in Livadia, with an archbiſhop's ſee and a ſtrong fort. It is built on the top of a mountain, in form of a ſugar-loaf; and is divided into four towns, each ſurrounded by walls, and commanded by a caſtle on the top of the mountain. The harbour is very ſmall, and may be ſhut up by a chain, the entrance being but 50 feet wide. It was taken from the Turks by the Venetians in 1687; but was afterwards evacuated, and the caſtle demoliſhed in 1699, in conſequence of the treaty of Carlowitz. It was near this town that Don John of Auſtria obtained the famous victory over the Turkiſh fleet in 1571. The produce of the adjacent country is wine, oil, corn, and rice. Turkey leather is alſo manufactured here. The wine would be exceedingly good if they did not pitch their veſſels on the inſide, but this renders the taſte very diſagreeable to thoſe who are not accuſtomed to it. The Turks have ſix or ſeven moſques here, and the Greeks two churches. It is ſeated on a gulph of the ſame name, in E. Lon. 22. 13. N. Lat. 38. 34.

LEPAS, the ACORN, in zoology; a genus belonging to the order of vermes teſtacea. The animal is the triton; the ſhell is multivalve, unequal, fixed by a ſtem or ſeſſile. There are ſeveral ſpecies, of which the moſt remarkable is the anatifera, conſiſting of five ſhells depreſſed, affixed to a pedicle and in cluſters. It adheres to the bottom of ſhips by its pedicles. The tentacula from this animal are feathered; and have given the old Engliſh hiſtorians and naturaliſts the idea of a bird. They aſcribed the origin of the barnacle gooſe to thoſe ſhells. See Plate CCLXIII.

LEPIDIUM, DITTANDER, or *Pepperwort*: A genus of the ſiliculoſæ order, belonging to the tetradynamia claſs of plants; and in the natural method ranking under the 39th order, *Siliquoſæ*. The ſilicula is emarginated, cordated, and polyſpermous, with the valves carinated, contrary or broader than the partition. There are 19 ſpecies, of which the only remarkable one is the latifolium or common dittander. This is a native of many parts both of Scotland and England. It hath ſmall, white, creeping roots, by which it multiplies very faſt, and is difficult to be eradicated after it has long grown in any place. The ſtalks are ſmooth, riſe two feet high, and ſend many ſide-branches. The flowers grow in cloſe bunches towards the top of the branches, coming out from the ſide; they are ſmall, and compoſed of four ſmall white petals. The ſeeds ripen in autumn. The whole plant has a hot biting taſte like pepper; and the leaves have been often uſed by the country-people to give a reliſh to their viands inſtead of that ſpice, whence the plant has got the appellation of *poor man's pepper*. It is reckoned an antiſcorbutic, and was formerly uſed inſtead of the *horſe radiſh ſcurvy-graſs*.

LEPIDOPTERA, in zoology, an order of inſects, with four wings, which are covered with imbricated ſquamulæ. See ZOOLOGY.

LEPISMA, in zoology; a genus of apterous inſects, the characters of which are: They have ſix feet formed for running; the mouth is furniſhed with four palpi, two of which are cetaceous and two capitated; the tail is terminated by extended briſtles, and the body imbricated with ſcales. There are 7 ſpecies. The *ſaccharina* (Plate CCLXXIV.) is an American ſpecies, ſo called becauſe moſtly found among ſugar; but now common in Europe. It is of a leaden colour, but rather inclining to that of ſilver, by reaſon of the ſmall ſilvery ſcales with which it is covered; by which ſame circumſtance it reſembles, eſpecially in its under part, the ſilver fiſh. It is found in gardens, under boxes, and in the crevices of window ſaſhes in houſes, where it is very common. It runs with great ſwiftneſs, and is difficult to catch. When touched, it loſes part of its ſcales. and its ſoftneſs makes it eaſy to cruſh.

LEPIUM, in natural hiſtory, a genus of foſſils of the harder gypſum, compoſed of very ſmall particles, and of a leſs glittering hue.

There is only one ſpecies of this genus, being one of the leaſt valuable and moſt impure of the claſs of gypſums. It is of an extremely rude, irregular, coarſe, and unequal ſtructure; a little ſoft to the touch, of a very dull appearance, and of different degrees of a greyiſh white. It is burnt in plaſter for the coarſer works; it calcines very ſlowly and unequally, and makes but a very coarſe and ordinary plaſter.

LEPROSY, a foul cutaneous diſeaſe, appearing in dry, white, thin, ſcurfy ſcabs, either on the whole body, or only ſome part of it, and uſually attended with a violent itching and other pains. See (the *Index* ſubjoined to) MEDICINE.

The leproſy is of various kinds, but the Jews were particulary ſubject to that called *Elephantiaſis*. Hence the Jewiſh law excluded lepers from communion with mankind, baniſhing them into the country or uninhabited places, without excepting even kings. When a leper was cleanſed, he came to the city gate, and was there examined by the prieſts; after this he took two live birds to the temple, and faſtened one of them to a wiſp of cedar and hyſſop tied together with a ſcarlet ribbon; the ſecond bird was killed by the leper, and the blood of it received into a veſſel of water; with this water the prieſt ſprinkled the leper, dipping the wiſp and the live bird into it: this done, the live bird was let go; and the leper, having undergone this ceremony, was again admitted into ſociety and to the uſe of things ſacred. See Levit. xiii. 46. 47. and Levit. xiv. 1. 2. &c.

LEPTODECORHOMBES, in natural hiſtory, a genus of foſſils of the order of the ſelenitæ; conſiſting of 10 planes, each ſo nearly equal to that oppoſite to it as very much to approach to a decahedral parallelopiped, though never truly or regularly ſo.

Of this genus there are only five known ſpecies, 1. A thin, fine, pellucid, and ſlender ſtreaked one, with tranſverſe ſtriæ, found in conſiderable quantities in the ſtrata of clay in moſt parts of England, particularly near Heddington in Oxfordſhire. 2. A thin dull-loaking, opaque, and ſlender-ſtreaked one, more ſcarce than the former, and found principally in Leiceſterſhire and Staffordſhire. 3. A thin fine-ſtreaked one, with longitudinal ſtriæ, found in the clay pits at Richmond, and generally lying at great depths. This has often on its top and bottom a very elegant ſmaller rhomboide, deſcribed by four regular lines. 4. A rough kind, with thick tranſverſe ſtriæ, and a ſcabrous ſurface, very common in Leiceſterſhire and Yorkſhire. And, 5. A very ſhort kind, with thick plates, common in the clay-pits of Northamptonſhire and Yorkſhire.

LEPTOPOLYGINGLIMI, in natural hiſtory, a genus of foſſils ſhells, diſtinguiſhed by a number of minute teeth at the cardo; whereof we find great numbers at Harwich-cliff, and in the marle-pits of Suſſex.

LEPTUM, in antiquity, a ſmall piece of money, which, according to ſome, was only the eighth part of an obolus; but others will have it to be a ſilver or braſs drachm.

LEPTURA, in zoology, a genus of inſects belonging to the order of coleoptera, the characters of which are theſe:—The feelers are briſtly; the elytra are attenuated towards the apex: and the thorax is ſomewhat cylindrical. There are 25 ſpecies, principally diſtinguiſhed by their colour.

LEPUS, in zoology, a genus of quadrupeds belonging to the order of glires. The characters are theſe ;—They have two fore-teeth in each jaw ; thoſe in the upper-jaw are double, the interior ones being ſmalleſt.

1. The timidus, or common hare, has a ſhort tail ; the points of the ears are black ; the upper lip is divided up to the noſtrils ; the length of the body is generally about a foot and a half; and the colour of the hair is reddiſh, interſperſed with white. The hare is naturally a timid animal. He ſleeps in his form or ſeat during the day ; and feeds, copulates, &c. in the night. In a moon-light evening, a number of them are ſometimes ſeen ſporting together; leaping and purſuing each other : But the leaſt motion, the falling of a leaf, alarms them; and then they all run off ſeparately, each taking a different route. They are extremely ſwift in their motion, which is a kind of gallop, or a ſucceſſion of quick leaps. When purſued, they always take to the higher grounds : as their fore-feet are much ſhorter than the hind ones, they run with more eaſe up-hill than down-hill. The hare is endowed with all thoſe inſtincts which are neceſſary for his own preſervation. In winter he chooſes a form expoſed to the ſouth, and in ſummer to the north. He conceals himſelf among vegetables of the ſame colour with himſelf. Mr Fouilloux ſays, that he obſerved a hare, as ſoon as he heard the ſound of the horn, or the noiſe of the dogs, although at a mile's diſtance, riſe from her ſeat, ſwim acroſs a rivulet, then lie down among the buſhes, and by this means evade the ſcent of the dogs. After being chaſed for a couple of hours, a hare will ſometimes puſh another from his form, and lie down in it himſelf. When hard preſſed, the hare will mingle with a flock of ſheep, run up an old wall and conceal himſelf among the graſs on the top of it, or croſs a river ſeveral times at ſmall diſtances. He never runs againſt the wind, or ſtraight forward : but conſtantly doubles about, in order to make the dogs loſe their ſcent.

It is remarkable that the hare, although ever ſo frequently purſued by the dogs, ſeldom leaves the place where ſhe was brought forth, or even the form in which ſhe uſually ſits. It is common to find them in the ſame place next day, after being long and keenly chaſed the day before. The females are more groſs than the male, and have leſs ſtrength and agility ; they are likewiſe more timid, and never allow the dogs to appoach ſo near their form before riſing as the males. They likewiſe practiſe more arts, and double more frequently than the males.

The hare is diffuſed almoſt over every climate : and notwithſtanding they are every where hunted, their ſpecies never diminiſhes. They are in a condition of propagating the firſt year of their lives; the females go with young about 30 days, and produce four or five at a time ; and as ſoon as they have brought forth, they again admit the embraces of the male ; ſo that they may be ſaid to be always pregnant. The eyes of the young are open at birth ; the mother ſuckles them about 20 days, after which they ſeparate from her, and procure their own food. The young never go far from the place where they were brought forth; but ſtill they live ſolitary, and make forms about 30 paces diſtant from each other : Thus, if a young hare be found any-where, you may almoſt be certain of finding ſeveral others within a very ſmall diſtance. The hare is not ſo ſavage as his manners would indicate. He is gentle and is ſuſceptible of a kind of education. He is pretty eaſily tamed, and will even ſhow a kind of attachment to the people of the houſe : But ſtill this attachment is not ſo ſtrong or laſting as to engage him to become altogether domeſtic ; for although taken when very young, and brought up in the houſe, he no ſooner arrives at a certain age, than he takes the firſt opportunity of recovering his liberty, and flying to the fields. The hare lives about ſeven or eight years. He feeds upon graſs and other vegetables. His fleſh is excellent food.

Hares are very ſubject to fleas. Linnæus tells us, that the Dalecarlians make a ſort of cloth, called *felt*, of the fur; which by attracting theſe inſects, preſerves the wearer from their troubleſome attacks. The hair of this creature makes a great article in the hat manufacture ; and, as Britain cannot ſupply a ſufficient quantity, a great deal is annually imported from Ruſſia and Siberia. The hare was reckoned a great delicacy among the Romans ; the Britons, on the contrary, thought it impious even to taſte it : yet this animal was cultivated by them, either for the pleaſure of the chace, or for the purpoſes of ſuperſtition ; as we are informed, that Boadicea, immediately before her laſt conflict with the Romans, let looſe a hare ſhe had concealed in her boſom, which taking what was deemed a fortunate courſe, animated her ſoldiers by the omen of an eaſy victory over a timid enemy.

2. The variabilis, or varying hare of Pallas, has ſoft hair, which in ſummer is grey, with a ſlight mixture of black and tawny : the ears are ſhorter, and the legs more ſlender than thoſe of the common hare : the tail is entirely white, even in ſummer ; and the feet are moſt cloſely and warmly furred. In winter, the whole animal changes to a ſnowy whiteneſs, except the tips and edges of the ears, which remain black, as are the ſoles of the feet, on which, in Siberia, the fur is doubly thick, and of a yellow colour. It is leſs than the common ſpecies.—Theſe animals inhabit the higheſt Scottiſh Alps, Norway, Lapland, Ruſſia, Siberia, Kamtſchatka, and the banks of the Wolga, and Hudſon's-Bay. In Scotland, they keep on the tops of the higheſt hills, and never deſcend into the vales ; nor do they ever mix with the common hare, though theſe abound in this neighbourhood. They do not run faſt ; and are apt to take ſhelter in clefts of rocks. They are eaſily tamed and are full of frolic. They are fond of honey and carraway comfits ; and they are obſerved to eat their own dung before a ſtorm. This ſpecies changes its colour in September ; reſumes its grey coat in April; and in the extreme cold of Greenland only is always white. Both kinds of hares are common in Siberia, on the banks of the Wolga, and in the Orenburg government. The one never changes colour : the other, native of the ſame place, conſtantly aſſumes the whiteneſs of the ſnow during winter. This it does, not only in the open air and in a ſtate of liberty, but, as experiment has proved, even when kept tame, and preſerved in houſes in the ſtove-warmed apartments, in which it experiences the ſame changes of colour as if it had dwelt on the ſnowy plains.—They collect together, and are ſeen in troops of five or ſix hundred, migrating in ſpring, and returning in autumn. They are compelled to this by the want of ſubſiſtence,

quitting in the winter the lofty hills, the ſouthern boundaries of Siberia, and ſeek the plains and northern wooded parts, where vegetables abound; and towards ſpring ſeek again the mountainous quarters.

Mr Muller ſays, he once ſaw two black hares, in Siberia, of a wonderful fine gloſs, and of as full a black as jet. Near Caſan was taken another, in the middle of the winter 1768. Theſe ſpecimens were much larger than the common kind.

In the ſouthern and weſtern provinces of Ruſſia is a mixed breed of hares, between this and the common ſpecies. It ſuſtains, during winter only, a partial loſs of colour: the ſides, and more expoſed parts of the ears and legs, in that ſeaſon becoming white; the other parts retaining their colours. This variety is unknown beyond the Urallian chain. It is called by the Ruſſians *ruſſak;* they take them in great numbers in ſnares, and export their ſkins to England and other places for the manufacture of hats. The Ruſſians and Tartars, like the Britons of old, hold the fleſh of hares in deteſtation, eſteeming it impure: that of the variable, in its white ſtate, is exceſſively inſipid.

There have been ſeveral inſtances of what may be called monſters in this ſpecies, horned hares, having excreſcences growing out of their heads, like to the horns of the roe-buck. Such are thoſe figured in Geſner's hiſtory of quadrupeds, p. 634; in the *Muſeum Regium Hafniæ*, nº 48. tab. iv; and in Klein's hiſtory of quadrupeds, 32. tab. iii.; and again deſcribed in Wormius's muſeum, p. 321, and in Grew's muſeum of the Royal Society. Theſe inſtances have occurred in Saxony, in Denmark, and near Aſtracan.

3. The Americanus, American hare, or hedge-coney, has the ears tipt with grey; the upper part of the tail is black, the lower white: the neck and body are mixed with cinerous, ruſt-colour, and black; the legs are of a pale ferruginous colour; and the belly is white: the forelegs are ſhorter, and the hind legs longer, in proportion, than theſe of the common hare. In length it is 18 inches; and weighs from 3 to 4½ pounds.—This ſpecies inhabits all parts of North America. In New Jerſey, and the States ſouth of that State, it retains its colour the whole year. In New England, Canada, and about Hudſon's-Bay, at the approach of winter, it changes its ſhort ſummer's fur for one very long, ſilky, and ſilvery, even to the roots of the hairs; the edges of the ears only preſerving their colour. At that time theſe hares are in the higheſt ſeaſon for the table; and are of vaſt uſe to thoſe who winter in Hudſon's-Bay, where they are taken in great abundance in ſprings made of braſs-wire, to which they are led by a hedge made for that purpoſe, with holes left before the ſnares for the animals to paſs through.—They breed once or twice a-year, and have from five to ſeven at a time. They do not migrate, like the preceding; but always haunt the ſame places: neither do they burrow; but lodge under fallen timber, and in hollow trees. They breed in the graſs; but in ſpring ſhelter their young in the trees, to which they alſo run when purſued; from which, in the ſouthern States, the hunters force them by means of a hooked ſtick, or by making a fire, and driving them out by the ſmoke.

4. The tolai, or a Baikal hare, has a tail longer than that of a rabbit; and the ears are longer in the male in proportion than thoſe of the varying hare; the fur is of the colour of the common hare; and the ſize between that and the common and the varying hare. It inhabits the country beyond lake Baikal, and extends through the great Gobee even to Thibet. The Tanguts call it *Rangwo*, and conſecrate it among the ſpots of moon. The Mongols call it *Tolai*. It agrees with the common rabbit in colour of the fleſh; but does not burrow, running inſtantly (without taking a ring as the common hare does) for ſhelter, when purſued, into holes of rocks. The fur is bad and of no uſe in commerce.

5. The Capenſis, or Cape-hare, has long ears dilated in the middle: the outſides naked, and of a roſe colour, the inſide and edges covered with ſhort grey hairs: the crown and back are of a duſky colour mixed with tawny: the cheeks and ſides cinereous; the breaſt, belly, and legs, ruſt-coloured; the tail is buſhy carried upwards; and of a pale ferruginous colour. The animal is about the ſize of a rabbit. It inhabits the country three days north or the Cape of good Hope; where it is called the *mountain hare*, for it lives only in the rocky mountains, and does not burrow. It is difficult to ſhoot it; as it inſtantly, on the ſight of any one, runs into the fiſſures of the rocks.

Allied to this, in Mr Pennant's opinion, ſeems the viſcachos, or viſcachas, mentioned by Acoſta and Fruillee, in their accounts of Peru: they compare them to hares or rabbits. The laſt ſays, they inhabit the colder parts of the country. Their hair is very ſoft, and of a mouſe-colour; the tail is pretty long, and turns up; and the ears and whiſkers are like thoſe of the common rabbit. In the time of the Incas, the hair was ſpun, and wove into cloth, which was ſo fine as to be uſed only by the nobility.

6. The cuniculus, or rabbit, has a very ſhort tail, and naked ears. The colour of the fur, in a wild ſtate, is brown; the tail black above, white beneath: in a tame ſtate the general colour varies to black, pied, and quite white; and the eyes are of a fine red. The native country of this ſpecies is Spain, where they were formerly taken with ferrets, as is practiſed in this country at preſent. They love a temperate and warm climate, and are incapable of bearing great cold; ſo that in Sweden they are obliged to be kept in houſes. They abound in Britain. Their furs make a conſiderable article in the hat manufactories; and of late ſuch part of the fur as is unfit for that purpoſe, has been found as good as feathers for ſtuffing beds and bolſters. Numbers of the ſkins are annually exported into China. The Engliſh counties moſt noted for rabbits are Lincolnſhire, Norfolk, and Cambridgeſhire. Methold, in this laſt county, is famous for the beſt kind for the table; the ſoil there is ſandy, and full of moſſes and the *carex* graſs. Rabbits ſwarm in the iſles of Orkney, where their ſkins form a conſiderable article of commerce. The rabbits of thoſe iſles are in general grey; thoſe which inhabit the hills grow hoary in winter.

The variety called the *ſilver haired* rabbit was formerly in great eſteem for lining of clothes, and their ſkins were ſold for 3s. a piece; but ſince the introduction of more elegant furs, their price has fallen to 6d. The Sunk Iſland in the Humber was once famous for a mouſe-coloured ſort, which has ſince been extirpated by reaſon of the injury they did to the banks by burrowing.—Other varieties are, The *Angora* rabit, with hair long, waved, and of a ſilky fineneſs, like that of the goat Angora;—and the *Hooded Rabbit* deſcribed by Edwards as having a double ſkin over the back into which it can withdraw its head, and another under the throat in which it can place its forefeet; it has ſmall holes in the looſe ſkin on the back, to admit light to the eyes. The colour of the body is cinereous, of the head and ears, brown.

The fecundity of the rabbit is ſtill greater than that of the hare. They will breed ſeven times in the year, and the female ſometimes brings eight young ones at a time. Suppoſing this to happen regularly for four years, the number of rabbits from a ſingle pair will amount to 1,274,840. By this account we might juſtly apprehend being overſtocked with theſe animals; but a great number of enemies prevents their increaſe; not only men, but hawks and beaſts of prey making dreadful havoc among them. Notwithſtanding all theſe different enemies, however, we are told by Pliny and Strabo, that they once proved ſuch a nuiſance to the inhabitants of the Balearic iſlands, that they were obliged to implore the aſſiſtance of a military force from Auguſtus in order to exterminate them. They devour herbage of all kinds, roots, grain, fruits, &c. They are in a condition for generating at the end of ſix months; and, like the hare, the female is almoſt conſtantly in ſeaſon; ſhe goes with young about 30 days, and brings forth from four to eight at a litter. A few days before littering, ſhe digs a hole in the earth, not in a ſtraight line, but in a zig-zag form; the bottom of this hole ſhe enlarges every way, and then pulls off a great quantity of hair from her belly, of which ſhe makes a kind of bed for her young. During the two firſt days after birth, ſhe never leaves them, but when preſſed with hunger, and then ſhe eats quickly and returns; and in this manner ſhe ſuckles and attends her young for ſix weeks. All this time both the hole and the young are concealed from the male; ſome times when the female goes out ſhe, in order to deceive the male, fills up the mouth of the hole with earth mixed with her own urine. But when the young ones begin to come to the mouth of the hole, and to eat ſuch herbs as the mother brings to them, the father ſeems to know them; he takes them betwixt his paws, ſmooths their hair, and careſſes them with great fondneſs.

The following ſpecies are without tails.

7. The Alpinus, or Alpine rabbit, has ſhort, broad, rounded ears; a long head, and very long whiſkers with two very long hairs above each eye; the colour of the fur at the bottom is duſky: towards the ends of a bright ferruginous colour; the tips white, and intermixed are ſeveral long duſky hairs, though on firſt inſpection the whole ſeems of a bright bay. The length of the animal is nine inches. This ſpecies is firſt ſeen on the Altaic chain; extends to lake Baikal; from thence to Kamtſchatka; and, as is ſaid, found in the new diſcovered Fox or Aleutian iſlands. They inhabit always the middle region of the ſnowy mountains, in the rudeſt places; wooded and abounding with herbs and moiſture. They ſometimes form burrows between the rocks, and oftener lodge in the crevices. They are generally found in pairs; but in cloudy weather they collect together, and lie on the rocks, and give a keen whiſtle, ſo like that of a ſparrow, as to deceive the hearer. On the report of a gun, they run into their holes; but ſoon come out again, ſuppoſing it to be a clap of thunder, to which they are ſo much uſed in their lofty habitations. By wonderful inſtinct they make a proviſion againſt the rigorous ſeaſon in their inclement ſeats. A company of them, towards autumn, collect together vaſt heaps of choice herbs and graſſes, nicely dried, which they place either beneath the over-hanging rocks, or between the chaſms, or round the trunk of ſome tree. The way to theſe heaps is marked by a worn path. In many places the herbs appear ſcattered, as if to be dried in the ſun and harveſted properly. The heaps are formed like round or conoid ricks; and are of various ſizes, according to the number of the ſociety employed in forming them. They are ſometimes of a man's height, and many feet in diameter, but uſually about three feet. Without this proviſion of winter's ſtock they muſt periſh, being prevented by the depth of ſnow from quitting their retreats in queſt of food. They ſelect the beſt of vegetables, and crop them when in the fulleſt vigour, which they make into the beſt and greeneſt hay by the judicious manner in which they dry it. Theſe ricks are the origin of fertility amidſt the rocks; for the reliques, mixed with the dung of the animals, rot in the barren chaſms, and create a ſoil productive of vegetables. Theſe ricks are alſo of great ſervice to thoſe people who devote themſelves to the laborious employment of ſable-hunting: for being obliged to go ſo far from home, their horſes would often periſh for want if they had not the proviſion of theſe little induſtrious animals to ſupport them; which is eaſily to be diſcovered by their height and form, even when covered with ſnow. It is for this reaſon that this little creature has a name among every Siberian and Tartarian nation, which otherwiſe would have been overlooked and deſpiſed. The people of Jakutz are ſaid to feed both their horſes and cattle with the reliques of the winter ſtock of theſe hares. Theſe animals are neglected as a food by mankind; but are the prey of ſables and the Siberian weeſel, which are joint inhabitants of the mountains. They are likewiſe greatly infeſted by a ſort of gadfly, which lodges its egg in their ſkin in Auguſt and September, which often proves deſtructive to them.

8. The ogotona has oblong oval ears, a little pointed; with ſhorter whiſkers than the former, and hairs long and ſmooth: the colour of thoſe on the body is brown at the roots, light grey in the middle, and white at the ends intermixed with a very few duſky hairs: there is a yellowiſh ſpot on the noſe, and ſpace about the rump of the ſame colour: the outſide of the limbs are yellowiſh; the belly is white. The length is about ſix inches: weight of the male, from 6¼ to 7¼ ounces; of the female, from 4 to 4½. This ſpecies inhabits only the country beyond lake Baikal, and from thence is common in all parts of the Mongolian deſert, and the vaſt deſert of Gobêe, which extends on the back of China and Thibet, even to India. It frequents the open valleys and gravelly or rocky naked mountains. Theſe little creatures are called by the Mongols, *Ogotona*; and are found in vaſt abundance. They live under heaps of ſtones; or burrow in the ſandy ſoil, leaving two or three entrances, which all run obliquely. They make a neſt of ſoft graſs; and the old females make for ſecurity a number of burrows near each other, that they may if diſturbed retreat from one to the other. They wander out chiefly in the night. Their voice is exceſſively

ceſſively ſhrill, and emits a note like that of a ſparrow, twice or thrice repeated, but very eaſily to be diſtinguiſhed from that of the Alpine rabbit. They live principally on the tender bark of a ſort of ſervice and the dwarf-elm; in the ſpring, on different herbs. Before the approach of ſevere cold, in the early ſpring, they collect great quantities of herbs, and fill their holes with them, which the inhabitants of the country conſider as a ſure ſign of change of weather. Directed by the ſame inſtinct with the former ſpecies, they form in autumn their ricks of hay of a hemiſpherical ſhape, about a foot high and wide: in the ſpring theſe elegant heaps diſappear, and nothing but the relicts are ſeen. They copulate in the ſpring and about the latter end of June their young are obſerved to be full grown. They are the prey of hawks, magpies, and owls: but the cat Manul † makes the greateſt havock among them: and the ermine and fitchet are equally their enemy.

† See *Felis*.

9. The puſillus, or calling rabbit, with a long head thickly covered with fur even to the tip of the noſe; numerous hairs in the whiſkers; ears large and rounded legs very ſhort, and the ſoles furred beneath: its whole coat is very ſoft, long, and ſmooth, with a thick, long, fine down beneath, of a browniſh lead colour; the hairs are of the ſame colour, towards the ends of a light grey and tipt with black; the lower part of the body is hoary: the ſides and ends of the fur are yellowiſh. The length of the animal is about ſix inches: weight from $3\frac{1}{4}$ to $4\frac{1}{4}$ oz. but in winter ſcarcely $2\frac{1}{4}$. This ſpecies inhabits the ſouth-eaſt parts of Ruſſia, and about all the ridge of hills ſpreading ſouthward from the Urallian chain; alſo about the Irtiſh, and in the weſt part of the Altaic chain; but no where in the eaſt beyond the Oby. They delight in the moſt ſunny valleys and herby hills, eſpecially near the edges of woods, to which they turn on any alarm. They live in ſo concealed a manner as very rarely to be ſeen: but are often taken in winter in the ſnares laid for the ermines; ſo are well known to the hunters. About the Volga they are called *ſemlanoi Saetſhik*, or *groundhare*: the Tartars, from their voice, ſtyle them *tſchotſchot* or *ittſitſkan*, or the *barking mouſe*: the Kalmucs call them *ruſla*. They chooſe for their habitations a dry ſpot, amidſt buſhes covered with a firm ſod, preferring the weſtern ſides of the hills. In theſe they burrow, leaving a very ſmall hole for the entrance; and forming long galleries, in which they make their neſts. Thoſe of the old ones and females are numerous and intricate: ſo that their place would be ſcarcely known but for their excrements: and even thoſe they drop, by a wiſe inſtinct, under ſome buſh, leſt their dwelling ſhould be diſcovered by their enemies among the animal creation. Their voice alone betrays their abode; it is like the piping of a quail, but deeper, and ſo loud as to be heard at the diſtance of half a German mile. It is repeated by juſt intervals, thrice, four times, and often ſix. The voice is emitted at night and morning; in the day, except in rainy and cloudy weather. It is common to both ſexes; but the female is ſilent for ſome time after parturition, which is about the beginning of May N. S. She brings forth ſix at a time, blind and naked; which ſhe ſuckles often, and covers carefully with the materials of her neſt. Theſe moſt harmleſs and inoffenſive animals never go from their holes. They feed and make their little excurſions by night: they are eaſily made tame; and will ſcarcely bite when handled. The males in confinement are obſerved to attack one another, and expreſs their anger by a grunting noiſe.

There are three or four other ſpecies of lepus. Several are figured on Plate CCLXIX.

Lepus, the hare, in aſtronomy, a conſtellation of the ſouthern hemiſphere: whoſe ſtars in Ptolemy's catalogue are 12; in that of Tycho 13; and in the Britannic 19.

LERCHEA, in botany; a genus of the pentandria order, belonging to the monodelphia claſs of plants. The calyx is five-toothed; the corolla funnel-ſhaped and quinquefid; there are five antheræ ſitting on the tube of the germ; there is one ſtyle; the capſule trilocular and polyſpermous.

LERI (John de), a Proteſtant miniſter of the province of Burgundy. He was ſtudying at Geneva when it was reported there that Villegagnon deſired they would ſend him ſome paſtors into Brazil. He made that voyage with two miniſters, whom the church of Geneva ſent thither in 1556; and wrote an account of that voyage, which has been much commended by Thuanus and others.

LERIA, or Leiria, a ſtrong town of Eſtremadura in Portugal, with a caſtle and biſhop's ſee. It contains about 3500 inhabitants, and was formerly the reſidence of the kings of Portugal. W. Long. 7. 50. N. Lat. 39. 40.

LERIDA, on ancient, ſtrong, and large town of Spain, in Catalonia, with a biſhop's ſee, an univerſity, and a ſtrong caſtle. This place declared for king Charles after the reduction of Barcelona in 1705: but it was retaken by the duke of Orleans in 1707, after the battle of Almanza. It is ſeated on a hill near the river Segra, and in a fertile ſoil, in E. Long. 0. 35. N. L. 41. 31.

LERINA, or Planasia, (anc. geog.), one of the two ſmall iſlands over againſt Antipolis, called alſo *Lerinas* and *Lerinus*. Now St Honorat, on the coaſt of Provence, ſcarce two leagues to the ſouth of Antibes.

LERINS, the name of two iſlands in the Mediterranean ſea, lying on the coaſt of Provence in France, five miles from Antibes; that near the coaſt, called *St Margaret*, is guarded by invalids, ſtate-priſoners being ſent here. It was taken by the Engliſh in 1746, but marſhal Belleiſle retook it in 1747. The other is called *St Honorat*; and is leſs than the former, but has a Benedictine abbey.

LERMA, a town of Spain, in old Caſtile, ſeated on the river Arlanza, with the title of a *duchy*. W. Lon. 3. 5. N. Lat. 42. 2.

LERNA, (anc. geog.), not far from Argos, on the confines of Laconica; ſuppoſed to be a town of Laconica, but on the borders of Argolis; the poſition which Pauſanias allots to it, near Temenium, on the ſea; without adding whether it is town, river, or lake. According to Strabo, it is a lake, ſituated between the territories of Argos and Mycene, in contradiction to Pauſanias. If there was a town of this name, it ſeems to have ſtood towards the ſea, but the lake to have been more inland. Mela calls it a well known town on the Sinus Argolicus; and Statius by Lerna ſeems to mean ſomething more than a lake. This, however, is the lake in which, as Strabo ſays, was the fabled Hydra of Hercules: therefore called *Lerna Anguifera*

guifera (Statius). The lake runs in a river or ſtream to the ſea, and perhaps ariſes from a river, (Virgil.) From the lake the proverb, *Lerna Malorum*, took its to riſe; becauſe, according to Strabo, religious purgations were performed in it; or, according to Heſychius, becauſe the Argives threw all their filth into it.

LERNEA, in zoology; a genus of inſects of the order of Vermes molluſca, the characters of which are: The body fixes itſelf by its tentacula, is oblong, and rather tapering; there are two ovaries like tails, and the tentacula are ſhaped like arms. (See three ſpecimens figured on Plate CCLXXIV.)—1. The cyprinacea has four tentacula, two of which are lunulated at the top. It is a ſmall ſpecies; about half an inch long, and of the thickneſs of a ſmall ſtraw: the body is rounded, of a pale greyiſh white, gloſſy on the ſurface, and ſomewhat pellucid: it is thruſt out of a kind of coat or ſheath, as it were at the baſe, which is of a white colour and a thick ſkin: towards the other extremity of the body, there are three obtuſe tubercles, one of which is much larger than the reſt: the mouth is ſituated in the anterior part, and near it there are two ſoft and and fleſhy proceſſes; and near theſe there is alſo on each ſide another ſoft proceſs, which is lunated at the extremity. It is found on the ſides of the bream, carp, and roach, in many ponds and rivers, in great abundance. 2. The ſalmonea, or ſalmon-louſe, has an ovated body, cordated thorax, and two linear arms approaching nearly to each other. 3. The aſellina, has a lunated body and cordated thorax; and inhabits the gills of the cod-fiſh and ling of the northern ocean.

LERNICA, formerly a large city in the iſland of Cyprus, as appears from its ruins; but is now no more than a large village ſeated on the ſouthern coaſt of that iſland, where there is a good road and a ſmall fort for its defence.

LERO (anc. geog.); one of the two ſmall iſlands in the Mediterranean, oppoſite to Antipolis, and half a mile diſtant from it to the ſouth. Now *St Margarita*, over againſt Antibes, on the coaſt of Provence.

LERO, or *Leros*, an iſland of the Archipelago, and one of the Sporades; remarkable, according to ſome authors, for the birth of Patroclus. E. Long. 26. 15. N. Lat. 37. 0.

LE ROY LE VEUT, the king's aſſent to public bills. See the articles BILL, STATUTE, and PARLIAMENT.

LERWICK, the capital town of Shetland, ſituated in the iſland called the *Mainland*, in W. Long. 1. 30. N. Lat. 61. 20. It contains about 300 families, with abundance of good houſes, and as faſhionable people as are to be ſeen in any town in Scotland of its bulk. At the north end of the town there is a regular fort, which was built at the charge of the government in the reign of King Charles II.; who, in the time of his firſt war with the Dutch ſent over a garriſon conſiſting of 300 men under the command of one colonel William Sinclair a native of Zetland, and one Mr Milne architect, for building the ſaid fort, with 20 or 30 cannons to plant upon it for protection of the country. There was a houſe built within the fort ſufficient to lodge 100 men. The garriſon ſtaid here three years; the charge of which, with the building the fort, is ſaid to have ſtood the king 28,000 pounds ſterling. When the garriſon removed, they carried off the cannon from the fort; and in the next war with the Dutch, two or three years after the garriſon removed, a Dutch frigate came into Braſay Sound, and burnt the houſe in the fort and ſeveral others the beſt in the town. Lerwick has no freedom nor privileges, but is governed by a bailie upon the ſame footing with the other bailies in the country. There is a church in it, and one miniſter of the preſbyterian eſtabliſhment. He has for ſtipend 500 marks paid him out of the biſhop's rents of Orkney, 300 marks by the town of Lerwick, and the tythes of Gulberwick about 200 marks: making in all 1000 marks Scots yearly, with a free houſe and garden. Lerwick chiefly ſubſiſts by the reſort of foreigners to it; ſo when that fails it muſt decline, as indeed it has done for ſeveral years paſt, having been very little frequented by foreigners, and thereby is become poor. Several projects have been talked of, and written upon, which might have been very beneficial to Lerwick and Zetland had they taken place; as that of the Britiſh merchants carrying goods from Muſcovy and Sweden, deſigned for the plantations in America, that muſt be entered in Britain, having them entered at Lerwick, which would ſave a great deal of time and charges to theſe merchants; alſo the Greenland and Herring Fiſhery companies of Britain propoſed Lerwick as a moſt commodious port for lodging their ſtores in, and for repacking their herrings, melting their oil, and thence exporting the ſame to foreign markets. The grand objection to theſe ſettlements is, that Lerwick is an open unfortified place; and in caſe of a war, the merchants ſhips and goods would be expoſed to the enemy; for removing of which difficulty it has been obſerved, that would goverment beſtow a ſmall garriſon upon it of only 100 men and about 20 pieces of cannon, and be at a ſmall charge in repairing the old fort, and erecting a ſmall battery or two more, theſe meaſures might be ſufficient to ſecure the place againſt any ordinary effort the enemy might make againſt it: and Lerwick being thus fortified, all Britiſh ſhips coming from the Eaſt or Weſt Indies, could come ſafely there in time of war, and lie ſecure until carried thence by convoy, or otherwiſe as the proprietors ſhould direct; and thus Lerwick might become more advantageous to the trade of Great Britain than Gibraltar or port Mahon, and that for one tenth part of the charge of either of thoſe places.

Gifford's Deſcript. of Zetland, p. 7.

LESBOS, a large iſland in the Ægean ſea, on the coaſt of Æolia, of about 168 miles in circumference. It has been ſeverally called *Pelaſgia*, from the Pelaſgi by whom it was firſt peopled; *Macaria*, from Macareus who ſettled in it; and *Leſbos* from the ſon-in-law and ſucceſſor of Macareus who bore the ſame name. The chief towns of Leſbos were Methymna and Mitylene. It was originally governed by kings, but they were afterwards ſubjected to the neighbouring powers. The wine which it produced was greatly eſteemed by the ancients, and ſtill is in the ſame repute among the moderns. The Leſbians were ſo debauched and diſſipated, that the epithet of *Leſbian* was often uſed to ſignify debauchery and extravagance. Leſbos has given birth to many illuſtrious perſons, ſuch as Arion, Terpander, Sappho, &c. See MITYLENE.

LESCAILLE (James), a celebrated Dutch poet and printer, was born at Geneva. He and his daughter Catharine Leſcaille have excelled all the Dutch poets. That lady, who was ſurnamed the *Sappho of*

Holland, and the *tenth Muſe*, died in 1711. A collection of her poems have been printed in which are the Tragedies of Genſeric, Winceſlaus, Herod and Mariamne, Hercules and Dejaneira, Nicomedes, Ariadne, Caſſandra, &c. James Leſcaille her father deſerved the poet's crown, with which the emperor Leopold honoured him in the year 1603: he died about the year 1677, aged 67.

LESCAR, a town of Gaſcony, in France, and in the territory of Bearn, with a biſhop's ſee; ſeated on a hill, in W. Long. 0. 30. N. Lat. 43. 23.

LESGUIS, a people of Aſia, whoſe country is indifferently called by the Georgians *Leſguiſtan* and *Dagheſtan*. It is bounded to the ſouth and eaſt by Perſia and the Caſpian, to the ſouth-weſt and weſt by Georgia, the Oſſi, and Kiſti, and to the north by the Kiſti and Tartar tribes. It is divided into a variety of diſtricts generally independant, and governed by chiefs elected by the people. Guldenſtaedt has remarked, in the Leſguis language, eight different dialects, and has claſſes their tribes in conformity to this obſervation.

The firſt dialect comprehends 15 tribes, which are as follow: : 1. Avar, in Georgian Chunſagh. The chief of this diſtrict, commonly called *Avar Khan*, is the moſt powerful prince of Leſguiſtan, and reſides at Kabuda, on the river Kaſeruk. The village of Avar is, in the dialect of Andi, called *Harbul*. 2. Kaſeruk, in the high mountains, extending along a branch of the Koiſu, called *Karak*. This diſtrict is dependant on the Khan of the Kaſi Kumychs. 3. Idatle on the Koiſu, joining on the Andi; ſubject to the Avar Khan. 4. Mukratle, ſituated ou the Karak, and ſubject to the Avar Khan. 5. Onſecul, ſubject to the ſame, and ſituated on the Koiſu. 6. Karakhle, upon the Karak, below Kaſeruk, ſubject to the ſame. 7. Ghumbet, on the river Ghumbet, that joins the Koiſu, ſubject to the chief of the Coumyks. 8. Arakan; and, 9. Burtuma, on the Koiſu. 10. Antſugh, on the Samura, ſubject to Georgia. 11. Tebel, on the ſame river, independent. 12. Tamurgi, or Tumural, on the ſame river. 13. Akhti; and, 14. Rutal, on the ſame. 15 Dſkar, in a valley that runs from the Alazan to the Samura. It was formerly ſubject to Georgia, but is now independent. In this diſtrict are ſeen remains of the old wall that begins at Derbent, and probably terminates at the Alazan.—The inhabitants of Derbent believe that their town was built by Alexander, and that this wall formerly extended as far as the Black Sea. It is, however, probable, from many inſcriptions in old Turkiſh, Perſian, Arabic, and Ruſiſh characters, that the wall and the aqueducts with their various ſubterraneous paſſages, many of which are now filled up, are of high antiquity. This town ſuffered greatly during its ſiege by Sultan Amurath, who entirely deſtroyed the lower quarter, then inhabited by Greeks. It was again taken by Schach Abbas. (Gaerber). This town is the old Pylæ Caſpiæ.

The ſecond dialect is ſpoken in the two following diſtricts: 1. Dido, or Didonli, about the ſource of the Samura. This diſtrict is rich in mines; a ridge of uninhabited mountains divides it from Caket. 2. Unſo, on the ſmall rivulets that join the Samura. Theſe two diſtricts, containing together about 1000 families, were formerly ſubject to Georgia, but are now independent.

The third dialect is that of Kabutſh, which lies on the Samura rivulets, eaſt of Dido, and north of Caket.

The fourth dialect is that of Andi, ſituated on a rivulet that runs into the Koiſu. Some of its villages are ſubject to the Avar-Khan, but the greater part to the khan of Axai. The whole conſiſts of about 800 families.

The fifth dialect is common to four diſtricts, namely. 1. Akuſha, on the Koiſu, ſubject to the Uſmei, or khan of the Caitaks, and Kara-Caitaks, containing about 1000 families. The following cuſtom is attributed by Colonel Gaerber to the ſubjects of this prince: "Whenever the Uſmei has a ſon, he is carried round from village to village, and alternately ſuckled by every woman who has a child at her breaſt until he is weaned. This cuſtom, by eſtabliſhing a kind of brotherhood between the prince and his ſubjects, ſingularly endears them to each other." 2. Balkar. 3. Zudakara, or Zudakh, down the Koiſu, ſubject to the Uſmei. 4. Kubeſha, near the Koiſu. Colonel Gaerber, who wrote an account of theſe countries in 1728, gives the following deſcription of this very curious place: "Kubeſha is a large ſtrong town, ſituated on a hill between high mountains. Its inhabitants call themſelves Franki (Franks, a name common in the eaſt to all Europeans), and relate, that their anceſtors were brought hither by ſome accident, the particulars of which are now forgotten. The common conjecture is, that they were mariners caſt away upon the coaſt; but thoſe who pretend to be better verſed in their hiſtory, tell the ſtory this way:—The Greeks and Genoeſe, ſay they, carried on, during ſeveral centuries, a conſiderable trade, not only on the Black ſea, but likewiſe on the Caſpian, and were certainly acquainted with the mines contained in theſe mountains, from which they drew by their trade with the inhabitants great quantities of ſilver, copper, and other metals. In order to work theſe upon the ſpot, they ſent hither a number of workmen to eſtabliſh manufactures, and inſtruct the inhabitants. The ſubſequent invaſions of the Arabs, Turks, and Monguls, during which the mines were filled up, and the manufactures abandoned, prevented the ſtrangers from effecting their return, ſo that they continued here, and erected themſelves into a republic. What renders this account the more probable is, that they are ſtill excellent artiſts, and make very good fire-arms, as well rifled as plain; ſabres, coats of mail, and ſeveral articles in gold and ſilver, for exportation. They have likewiſe, for their own defence, ſmall copper canons, of three pounds calibre, caſt by themſelves. They coin Turkiſh and Perſian ſilver money, and even rubles, which readily paſs current, becauſe they are of the full weight and value. In their valleys they have paſture and arable lands, as well as gardens; but they purchaſe the greater part of their corn, truſting chiefly for ſupport to the ſale of their manufactures, which are much admired in Perſia, Turkey, and the Crimea. They are generally in good circumſtances, are a quiet, inoffenſive people, but high ſpirited, and independent. Their town is conſidered as a neutral ſpot, where the neighbouring princes can depoſit their treaſures with ſafety.

They elect yearly twelve magiſtrates, to whom they pay the moſt unlimited obedience; and as all the inhabitants are on a footing of perfect equality, each individual is ſure to have in his turn a ſhare in the government. In the year 1725, their magiſtrates, as well as the Uſmei, acknowledged the ſovereignty of Ruſſia, but without paying any tribute." 5. Zudakara, or Zadakh, down the Koiſu, ſubject to the Uſmei. It contains about 2000 families.

The ſixth dialect belongs to the diſtricts on the eaſtern ſlope of Caucaſus, between Tarku and Derbent, which are, 1. Caitak; and 2. Tabaſſeran, or Kara-Caitak, both ſubject to the Uſmei.

The ſeventh dialect is that of Kaſi-Coumyk, on a branch of the Koniſu, near Zudakara. This tribe has a khan, whoſe authority is recogniſed by ſome neighbouring diſtricts.

The eighth dialect is that of Kuracle, belonging to the khan of Cuba.

Beſides theſe, there are ſome other Leſguis tribes, whoſe dialects Mr Guldenſtaedt was unable to procure. From a compariſon of thoſe which he has obtained, it appears that the language of the Leſguis has no kind of affinity with any other known language, excepting only the Samoyede, to which it has a remote reſemblance.

This people is probably deſcended from the tribes of mountaineers, known to ancient geographers under the name of *Leſgæ*, or *Ligyes*. The ſtrength of their country, which is a region of mountains, whoſe paſſes are known only to themſelves, has probably at all times ſecured them from foreign invaſion; but as the ſame cauſe muſt have divided them into a number of tribes, independent of each other, and perhaps always diſtinguiſhed by different dialects, it is not eaſy to imagine any common cauſe of union which can ever have aſſembled the whole nation, and have led them to undertake very remote conqueſts. Their hiſtory, therefore, were it known, would probably be very unintereſting to us. They ſubſiſt by raiſing cattle, and by predatory expeditions into the countries of their more wealthy neighbours. During the troubles in Perſia, towards the beginning of this century, they repeatedly ſacked the towns of Shamachie and Ardebil, and ravaged the neighbouring diſtricts; and the preſent wretched ſtate of Georgia and of part of Armenia, is owing to the frequency of their incurſions. In their perſons and dreſs, and in their general habits of life, as far as theſe are known to us, they greatly reſemble the Circaſſian.

LESKARD, a town in Cornwall, ſeated in a level, is a corporation, and ſends two members to parliament. It had formerly a caſtle, now in ruins. It is one of the largeſt and beſt built towns in Cornwall, with the greateſt market. It was firſt incorporated by Edward earl of Cornwall, afterwards by King John's ſon, Richard king of the Romans, and had privileges from Edward the Black Prince. Queen Elizabeth granted it a charter; by which it was to have a mayor and burgeſſes, who ſhould have a perpetual ſucceſſion, purchaſe lands, &c. Here is a handſome town-hall built on ſtone pillars, with a turret on it, and a noble clock with four dials that coſt near 200 l. Here are a large church, a meeting-houſe, an eminent free-ſchool, and a curious conduit; and on the adjacent commons, which feed multitudes of ſheep, there have been frequent horſe races. It has a market on Saturday, and ſeven fairs in the year. The liſt of its parliament men begins the 23d of Edward I. Here is a very great trade in all manufactures of leather; and ſome ſpinning is ſet up here lately, encouraged by the clothiers of Devonſhire. On the hills of North Leſkard, and in the way from hence to Lounceſton, are many mines of tin, which is caſt at the blowing houſes into blocks, that are ſent hither to be coined.

LESLIE (John), biſhop of Roſs in Scotland, the ſon of Gavin Leſlie an eminent lawyer, was born in the year 1526, and educated at the univerſity of Aberdeen; of which dioceſe he was made official, when but a youth. He was ſoon after created doctor of civil and canon law; but being peculiarly addicted to the ſtudy of divinity, he took orders, and became parſon of Une. When the reformation began to ſpread in Scotland, and diſputes about religion ran high, Dr Leſlie, in 1560, diſtinguiſhed himſelf at Edinburgh as a principal advocate for the Romiſh church, and was afterwards deputed by the chief nobility of that religion to condole with queen Mary on the death of her huſband the king of France, and to invite her to return to her native dominions. Accordingly, after a ſhort reſidence with her majeſty, they embarked together at Calais in 1561, and landed at Leith. She immediately made him one of her privy-council, and a ſenator of the college of juſtice. In 1564, he was made abbot of Lundores; and on the death of Sinclair was promoted to the biſhopric of Roſs. Theſe accumulated honours he wiſhed not to enjoy in luxurious indolence. The influence derived from them, he exerted to the proſperity of his country. It is to him that Scotland is indebted for the publication of its laws, commonly called "the *black* acts of parliament," from the Saxon character in which they were printed. At his moſt earneſt deſire, the reviſion and collection of them were committed to the great officers of the crown. In 1568, queen Mary having fled to England for refuge, and being there detained a priſoner, queen Elizabeth appointed certain commiſſioners at York to examine into the cauſe of the diſpute between Mary and her ſubjects. Theſe commiſſioners were met by others from the queen of Scots. The biſhop of Roſs was of the number, and pleaded the cauſe of his royal miſtreſs with great energy, though without ſucceſs; Elizabeth had no intention to releaſe her. Mary, diſappointed in her expectations from the conference at York, ſent the biſhop of Roſs ambaſſador to Elizabeth, who paid little attention to his complaints. He then began to negociate a marriage between his royal miſtreſs and the duke of Norfolk; which negociation, it is well known, proved fatal to the duke, and was the cauſe of Leſlie's being ſent to the Tower. In 1573 he was baniſhed the kingdom, and retired to Holland. The two following years he ſpent in fruitleſs endeavours to engage the powers of Europe to eſpouſe the cauſe of his queen. His laſt application was to the pope; but the power of the heretic Elizabeth had no leſs weight with his holineſs than with the other Roman Catholic princes of Europe. Finding all his perſonal applications ineffectual, he had recourſe to his pen in Queen Mary's vindication; but Elizabeth's *ultima ratio regum* was too potent for all his arguments. Biſhop Leſlie, during his exile, was made coadjutor to the archbiſhop of Rouen. He was at Bruſſels when he received the account of Queen Mary's execution; and immediately retired to the convent of Guirtenberg near that city, where he died in the year 1596. It was during the long and unfortunate captivity of Mary, that he amuſed himſelf in writing the Hiſtory of Scotland, and his other works. The elegance and charms of literary occupations ſerved to aſſuage the violence of his woes. His knowledge and judgment as an hiſtorian are equally to be commended. Where he acts as the tranſciber of Bocce, there may be diſtinguiſhed, indeed ſome of the inaccuracies of that writer. But, when he ſpeaks in his own perſon, he has a manlineſs, a candour and a moderation, which appear not always even in authors of the Proteſtant perſuation. His works are, 1. *Afflicti animi conſolationes*, &c. compoſed for the conſolation of the captive queen. 2. *De origine, moribus, et geſtis Scotorum.* 3. *De titulo et jure ſereniſſimæ Mariæ Scotorum reginæ, quo regni Angliæ ſucceſſionam ſibi juſte vindicat.* 4. *Paræneſis ad Anglos et Scotos.* 5. *De illuſt. fæminarum in republ. adminiſtranda*, &c. 6. *Oratio ad reginam Elizabetham pro libertate impetranda.* 7. *Paræneſis ad nobilitatem populumque Scoticum.* 8. An account of his proceedings during his embaſſy in England from 1568 to 1572, manuſcript, Oxon. 9. Apology for the biſhop of Roſs, concerning the Duke of Norfolk: manuſcript, Oxon. 10. Several letters, manuſcript.

Leslie (Charles, an Iriſh divine, and a zealous Proteſtant: but being attached to the houſe of Stuart, he left Ireland, and went to the pretender at Bar le Duc, and reſided with him till near the time of his death; conſtantly endeavouring to make him a Proteſtant, but without effect. He died in 1722. His principal works are, 1. A ſhort and eaſy method with the Deiſts. 2. A ſhort and eaſy method with the Jews. 3. The ſnake in the graſs. 4. Hereditary right to the Crown of England aſſerted. 5. The Socinian controverſy diſcuſſed. 6. The charge of Socinianiſm againſt Dr Tillotſon conſidered; and many others. All his theological pieces, except that againſt Archbiſhop Tillotſon, were collected and publiſhed by himſelf, in 2 vols folio.

LESSER tone, in muſic. See Tone.

LESSINES, a town of the Auſtrian Netherlands, in Hainault, ſeated on the river Dender, and famous for its linen manufacture. W. Long. 3 53. N. Lat. 51. 41.

LESSONS, among eccleſiaſtical writers, portions of the Holy Scripture, read in Chriſtian churches, at the time of divine ſervice.

In the ancient church, reading the Scriptures was one part of the ſervice of the catechumens; at which all perſons were allowed to be preſent, in order to obtain inſtruction.

The church of England, in the choice of leſſons, proceeds as follows: for the firſt leſſon on ordinary days, ſhe directs, to begin at the beginning of the year with Geneſis, and ſo continue on till the books of the Old Teſtament are read over; only omitting the Chronicles, which are for the moſt part the ſame with the books of Samuel and Kings, and other particular chapters in other books, either becauſe they contain names of perſons, places, or other matters leſs profitable to ordinary readers.

The courſe of the firſt leſſons for Sundays is regulated after a different manner. From advent to Septuageſima-Sunday, ſome particular chapters of Iſaiah are appointed to be read, becauſe that book contains the cleareſt prophecies concerning Chriſt. Upon Septuageſima Sunday Geneſis is begun, becauſe that book which treats of the fall of man, and the ſevere judgement of God inflicted on the world for ſin, beſt ſuits with a time of repentance and mortification. After Geneſis, follow chapters out of the books of the Old Teſtament, as they lie in order; only on feſtival Sundays, ſuch as Eaſter, Whitſunday. &c. the particular hiſtory relating to that day is appointed to be read; and on the ſaints-days, the church appoints leſſons out of the moral books, ſuch as Proverbs, Eccleſiaſtes, Eccleſiaſticus, &c, as containing excellent inſtructions for the conduct of life.

As to the ſecond leſſons, the church obſerves the ſame courſe both on ſundays and week-days: reading the goſpels and Acts of the Apoſtles in the morning, and the epiſtles in the evening, in the order they ſtand in the new Teſtament: excepting on ſaints days and holy days, when ſuch leſſons are appointed as either explain the myſtery, relate the hiſtory, or apply the example to us.

LANCASTER in Pennſylvania: A wealthy, populous, and highly cultivated county; containing, according to an enumeration taken in purſuance of the act of congreſs of March 1790, at leaſt 36,000 ſouls. The county of Lancaſter was erected by an act of aſſembly of the (late) province, paſſed May 10, 1729, at which time it was a frontier, and only four counties, viz. Philadelphia, Bucks, Cheſter, and Lancaſter, in the province, according to its preſent limits. Lancaſter is at preſent bounded eaſtwardly by the county of Cheſter; weſtwardly, for 37 miles, by the great river Suſquehanna, which divides it from the county of York: north and north-weſt, by the counties of Berks and Dauphin; and ſouth, by the Maryland ſtate line: being in its greateſt extent, north and ſouth, about forty miles, and eaſt and weſt about forty five miles. The country in general is well watered; in exuberance of ſoil is exceeded by no part of the united ſtates, and may not improperly be called *The Garden of Pennſylvania.* The inhabitants are an induſtrious and thriving people, (a great proportion of them being Germans, or of German extraction) and annually ſupply the different markets of Philadelphia, Wilmington, and Newport, with great quantities of flour, wheat, rye, barley, hops, and hemp. Beſides the borough of Lancaſter, the county contains the thriving villages of Elizabeth, May Town, Rheims-Town, Ephrata, Leditz, (Lititz or Lydyards, being ſettled by Moravians) Manheim, Church Town, New Holland, and Straſburg (or Peddle-hauſen). It ſends at preſent ſix members to the ſtate houſe of repreſentatives.

Lancaster, (the borough of) the ſeat of juſtice for the county of Lancaſter, lies ſixty ſix miles weſtward of Philadelphia. It was laid out about the year 1730 or 1732, and was incorporated on the firſt day of May 1742. By virtue of its charter there are two market days, viz. Wedneſday and Saturday in each week; and two fairs, one in the ſummer, and one in the fall of each year. Lancaſter is ſuppoſed to be the largeſt inland town in the United States, and contained in the year 1792 ſix hundred and ninety ſix houſes, public buildings included, and about 4000 ſouls. The ſtreets interſect each other at right angles, but from the ſituation of the town on irregular and declining ground, it preſents a very ſingular appearance to ſtrangers on the firſt view. This ſituation, however, contributes greatly to the health of the inhabitants, as the water is thereby immediately carried off into the common ſewers, formed by the hand of nature, with very little aſſiſtance, and waſhed by conſiderable ſprings which riſe in the north-weſt and ſouth-eaſt corners of the town. The collection of ſprings which riſe in the north-weſt corner, and are very valuable, may be conducted into every part of the town by means of pipes or trunks. It has been frequently in view to accompliſh this deſirable object, and an act of aſſembly was paſſed on the 22d of January 1774, reciting ſome attempts that had already been made, and that it was propoſed by the burgeſſes, aſſiſtants and inhabitants of the ſaid borough to ſink and ſix ciſterns at different places for the reception and collection of water in large quantities for immediate uſe, in caſes of fire, &c. and impoſing a penalty upon perſons removing or damaging the pipes or trunks which might be fixed for conveying the water from thoſe ſprings. But this beneficial deſign was not at that time purſued, owing partly perhaps to the want of power in the corporation to raiſe money for the purpoſe, and partly to the war breaking out and the general calamities which enſued. But as theſe reaſons no longer operate, it is expected the public ſpirit of the inhabitants of Lancaſter will ſpeedily be exerted to improve the natural advantages, as well as to protect, to regulate, and adorn the town. To promote theſe deſirable ends they applied for and obtained an act of aſſembly, which was paſſed April 4, 1792, for eſtabliſhing a nightly watch, providing lamps, and ſupporting pumps for public uſe in the borough. This act alſo contemplates the former uſeful deſigns, and empowers the corporation to levy and collect money to erect and maintain dams and ſluices for the collection of water for the beneficial purpoſes abovementioned.

Lancaſter is well built, chiefly brick, and ſome of the public buildings conſiderably ornamented. The court-houſe, which is erected in a ſquare in the centre of the town is a ſuperb and ſpacious building. There are ſeven churches, appropriated to different Chriſtian ſocieties. To the Lutheran church a ſteeple was added in the year 1792 by the ingenious architect, Colliday of Philadelphia, and is, within a few feet, as high as the ſteeple of Chriſt Church in Philadelphia, and is allowed to be the neateſt, beſt proportioned and moſt elegant piece of work of the kind in the United States. It is intended to be furniſhed ſhortly with a complete ring of bells.

There are a variety of excellent tradeſmen in Lancaſter, but no particular manufacture of any kind is carried on at preſent to any extent except the manufacture of guns and rifles: though from the natural advantages it affords it will in all probability become a manufacturing town of conſiderable importance, at a period not far diſtant. An act of aſſembly was paſſed on the 10th day of March, 1787, to incorporate and endow the German college and charity ſchool in this borough, by the name of Franklin College; though for obvious reaſons, it has not yet riſen into any conſequence, but it is to be hoped it may one day become an uſeful nurſery of ſcience and virtue.

During the time the Britiſh troops were in poſſeſſion of Philadelphia, under the command of General Sir William Howe, the legiſlature held one ſeſſion at this place, viz. in December 1778, but before their next meeting the city was evacuated.

The environs of the borough of Lancaſter are extremely fertile, populous, and well cultivated, and within ſix miles, in different directions, are enumerated about 35 mills.

In conſequence of an act of aſſembly paſſed April 10, 1792, a company has been incorporated for making an artificial or turnpike road from Philadelphia to Lancaſter, in which work they are rapidly proceeding.*

---

* This article, which ſhould have come in at the 521ſt page, was not received till too late for its place; it judged proper to introduce it here.

BRITISH MUSEUM
